Artesia, NM 88210

Subject: Remediation Work Plan
Goodnight 1 Fee No. 1H
API# 30-005-64132 – 2RP-564

Dear Mr. Bratcher,

Devon Energy Production Company, L. P. (Devon) is committed to complying with all reporting requirements of the State of New Mexico Energy Minerals and Natural Resources Oil Conservation Division (NMOCD). In addition, Devon is committed to take a remedial action that will ensure protection of the state's groundwater. Please consider this letter to be an official remedial action plan to address both the drilling fluids and water spill and later an acid/water spill associated with the Goodnight 1 Fee No. 1H.

The drilling fluids and produced water spill occurred on January 5, 2011 and is located approximately 34 miles east of Roswell, New Mexico. The legal location for the site is Section 1, T12S, R28E, Chaves County, New Mexico. The Latitude/Longitude for the release is 32.30707 and -104.08448. A Form C-141 (attached) was approved on January 11, 2011.

A total of 2,300 barrels of drilling fluids and produced water resulted from the spill. Sixty-five barrels were immediately recovered and the impacted areas were scraped. These areas are located south and west of the location and down a two track ranch road approximately 0.25 mile where it pooled. Devon excavated 0.25 miles of the two track road from the location to the pooling area to a depth of three feet. Devon then refilled the road with new caliche. The pooling area south of location is estimated to be 345' long x 155' wide. The flow path to the west of location is estimated to be 96' long x 207' wide, where it then narrowed to 27' wide by 670' long. The pooling area off the two track road is estimated to be one 165' long x 87' wide. A site plan illustrating the impacted areas is attached.

The acid/water spill occurred on June 8, 2011 and is much smaller in volume and extent of the first spill and was primarily contained within the well pad and on top of the original drilling fluids/produced water spill. A total of 220 barrels of the 300 barrel acid/water mix was immediately recovered. The affected areas were 145' x 81' on the pad and 135' by 20' just off the pad behind the tanks. A Form C-141 (attached) was approved on August 9, 2011.

Soil Assessment and Remediation Work Plan – Goodnight

On May 4-5, 2011, Talon LPE conducted a site assessment and soil sampling. Grab soil samples were collected utilizing a split spoon auger rig. Bore holes were drilled into the impacted areas on the location and into the impacted areas located along the flow path. Soil samples were collected from the impacted areas and were tested on site using field titration method for chlorides to determine the vertical impacts of the release. The soil samples locations were labeled S-1 through S-1 and a map of these individual locations is attached.

Soil samples were collected by Talon personnel wearing clean nitrile gloves. The samples were placed in laboratory provided glassware and transported to Cardinal Laboratories in Hobbs, New Mexico for analysis. The samples were tested for Total Chlorides via Method SM4500CL-B. The complete laboratory reports dated May 13, 2011 and May 18, 2011 in addition to the resulting data sorted by sample locations are attached.

A third set of samples were collected by Talon personnel the week of August 21, 2011 during their initial site assessment. The samples were comprised from two separate stockpiles on the northern impacted area. The field titrations yielded concentrations of 4,679 mg/kg and 2,268 mg/kg.

Only one soil sample was collected for the acid/water spill. The pH was first tested with a pH level indicator strip and it tested nearly neutral. However, a sample was collected on August 30, 2011 and sent to the laboratory where the result was 2.19.

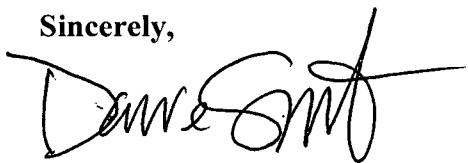

The site lies on undulating plains and low hills consisting of wind worked sandy deposits. Drainage courses in this area are normally dry. The local surface and shallow geology includes silty and clay-based soils underlain by dense caliche layers and sandstone. The New Mexico State Engineer web site indicates that nearest ground water data to be in Section 2, T12S, R28E. The groundwater in Section 2 reported to be at an average depth of 145' below ground surface (bgs). The NMOCD site assessment criteria based on depth to groundwater greater than 100', Wellhead Protection Area greater than 1000', and distance to surface water body greater than 1000' results in a 0 ranking.

A remedial action plan based on the NMOCD site assessment criteria and developed in collaboration with the landowner has been identified below:

- 1.) Repack the excavated areas within the existing two impacted soil piles
- 2.) Excavate, pile and blend the remaining impacted soils
- 3.) Excavate soil from nearby proposed stock tank locations
- 4.) Carefully transport the soil to the remediation areas to keep the caliche and top soil separate for re-application
- 5.) Maintain a minimum 18" lift of clean soils
- 6.) Contour the lift to match the surrounding terrain and seed using landowner's recommended seed mixture

Devon appreciates your review and feedback at your convenience. Please contact Nathan Kuhnert at (405) 228-7594 if you have any questions.

Sincerely,

A handwritten signature in black ink, appearing to read "Darren Smith".

Describe Cause of Problem and Remedial Action Taken.*

The Goodnight 1 Fee 1H took a kick from a nearby abandoned SWD well approximately 1500ft from location. We were drilling 17 1/2" surface hole at 1,323' when kick occurred. Due to the pressure of the old injection zone and the limitations of well control, a 2300 bbl spill occurred. Proper diversion techniques were used to control the amount of the spill by filling up unused tanks on location.

Calls were made to get vacuum trucks, back hoes, bulldozers, and dump trucks to well site ASAP.

Describe Area Affected and Cleanup Action Taken *

To date we have hauled off 48 yards of contaminated soil to Gandy - Marley salt disposal and land fill. Talon LPE, is going out to test soil and recommend remediation work that will be required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

RE: GOODNIGHT 1 FEE

Enclosed are the results of analyses for samples received by the laboratory on 05/11/11 14:33.

Cardinal Laboratories is accredited through Texas NELAP for:

Method SW-846 8021 Benzene, Toluene, Ethyl Benzene, and Total Xylenes

Method SW-846 8260 Benzene, Toluene, Ethyl Benzene, and Total Xylenes

Method TX 1005 Total Petroleum Hydrocarbons

Certificate number T104704398-08-TX. Accreditation applies to solid and chemical materials and non-potable water matrices.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2 Haloacetic Acids (HAA-5)

Method EPA 524.2 Total Trihalomethanes (TTHM)

Method EPA 524.4 Regulated VOCs (V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene".

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever that may be deemed valid or less valid in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affiliates or successors arising out of or related to the performance of the services hereunder by Cardinal, regardless of whether such claim is based upon any of the above stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories.

RE: GOODNIGHT 1 FEE

Enclosed are the results of analyses for samples received by the laboratory on 05/11/11 14:33.

Cardinal Laboratories is accredited through Texas NELAP for:

Method SW-846 8021 Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method SW-846 8260 Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method TX 1005 Total Petroleum Hydrocarbons

Certificate number T104704398-08-TX. Accreditation applies to solid and chemical materials and non-potable water matrices.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2 Haloacetic Acids (HAA-5)
Method EPA 524.2 Total Trihalomethanes (TTHM)
Method EPA 524.4 Regulated VOCs (V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene".

Celey D. Keene

Lab Director/Quality Manager

RE: GOODNIGHT 1 FEE NO. 14

Enclosed are the results of analyses for samples received by the laboratory on 09/22/11 12:04.

Cardinal Laboratories is accredited through Texas NELAP for:

Method SW-846 8021 Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method SW-846 8260 Benzene, Toluene, Ethyl Benzene, and Total Xylenes
Method TX 1005 Total Petroleum Hydrocarbons

Certificate number T104704398-08-TX. Accreditation applies to solid and chemical materials and non-potable water matrices.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2 Haloacetic Acids (HAA-5)
Method EPA 524.2 Total Trihalomethanes (TTHM)
Method EPA 524.4 Regulated VOCs (V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

A handwritten signature in black ink that reads "Celey D. Keene".

Celey D. Keene
