Re: Work Plan for the COG Operating LLC., State SRO #101 SWD, Unit G, Section 5, Township 26 South, Range 28 East, Eddy County, New Mexico.

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess two spills from the State SRO #101 SWD, Unit G, Section 5, Township 26 South, Range 28 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32.07323°, W 104.10709°. The site location is shown on Figures 1 and 2.

Background

Spill #1

According to the State of New Mexico C-141 Initial Report, the leak was discovered on January 22, 2011, and released approximately 180 barrels of produced water due to the water transfer pump being tied in into the wrong disposal line and recovered 130 barrels. To alleviate the problem, the pump was installed on the correct line.

The spill initiated inside the tank battery (lined facility) and impacted a path in front of the battery, measuring a length of approximately 240' and width of 10' to 40' wide. The spill migrated off the pad into the east and west pasture measuring approximately 40' x 40' and 20' X 75', respectively. The initial C-141 form is enclosed in Appendix A.

Tetra Tech
1910 North Big Spring Midland,TX 79705
Tel 432.682.4559 Fax 432.682.3946 www.tetratech.com

Spill #2

According to the State of New Mexico C-141 Initial Report, the leak was discovered on February 20, 2011, and released approximately 200 barrels of produced water due to a Victaulic connection rupturing. COG recovered 100 barrels of fluid. To alleviate the problem, the line was re-routed and returned to service.

The spill initiated outside the tank battery and impacted an area south of the battery measuring approximately 30' x 65'. The spill migrate across the pad (3 inches wide) and off the northwest edge of the pad impacting an area approximate length of 200', with a width of 3.0'. The initial C-141 form is enclosed in Appendix A.

Groundwater

No water wells were listed within Section 5. Based on the site location and NMOCD groundwater map, the average depth to groundwater in this area is less than 50' below surface. The well information is shown in Appendix B.

Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 100 mg/kg.

Soil Assessment and Analytical Results

Spill #1

On April 8, 2011, Tetra Tech personnel inspected and sampled the spill area. Eight auger holes (AH-1 through AH-8) were installed using a stainless steel hand auger to assess the impacted soils. Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by

EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The results of the sampling are summarized in Table 1. The auger hole locations are shown on Figure 3.

Referring to Table 1, all of the submitted samples were below the RRAL for TPH and BTEX. The chloride impact did show a shallow impact in the subsurface soils at depth ranging from 1.0' to 3.0' below surface. The area of AH-6 did not show a chloride impact the soils. Auger holes (AH-1 and AH-8) did showed chloride concentrations of 3,620 mg/kg at 5.0'-5.5' and 870 mg/kg at 3.5'4.0', respectively. These areas will require additional delineation.

Spill #2

On May 3, 2011, Tetra Tech personnel inspected and sampled the second spill area. Six auger holes (AH-1 through AH-6) were installed using a stainless steel hand auger to assess the impacted soils. Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The results of the sampling are summarized in Table 2. The auger hole locations are shown on Figure 3.

Referring to Table 2, all of the submitted samples were below the RRAL for TPH and BTEX. Referring to Table 2, the areas of AH-1, AH-2 and AH-3 did show shallow impact and declined with depth. Auger holes (AH-4, AH-5 and AH-6) declined with depth, but were not vertically defined. These areas will require additional delineation.

Work Plan

COG proposes the removal of impacted material to the depth as highlighted in Table 1 and Table 2, and shown on Figure 4. As shown in Table 1, the proposed excavation depths will range from 1.0' to 5.0' below surface in majority of the impacted areas. Based on the results, the areas of Spill #1 (AH-1 and AH-8) and Spill #2 (AH-4, AH-5 and AH-6) will be excavated to the appropriate depths and trenched using a backhoe to define the vertical extent of the chloride impact.

Based on site formation, the proposed excavation depths may not be reached due to wall cave ins and safety concerns for onsite personnel. In addition, impacted soil around oil and gas equipment, structures or lines may not be feasible or practicable to be removed due to safely concerns. As

such, Tetra Tech will excavate the soils to the maximum extent practicable. If the depths are not reached or if deeper impact is encountered, a 40 mil liner will be installed at depth of 4.0 below surface to cap the impacted area.

If you have any questions or comments concerning the assessment or the proposed remediation activities for this site, please call me at (432) 682-4559.

Respectfully submitted,
TETRA TECH

Ike Tavarez, PG
Project Manager

Construction crew tied in water transfer pump at the Myox 31 13 to wrong disposal line causing release. The water transfer pump was hooked up to the appropriate line and returned to service.

Describe Area Affected and Cleanup Action Taken.*

Initially 180bbls was released from the line and we were able to recover 130bbls with vacuum trucks. The spill was largely contained on the pad location of the SRO SWD #101 and measured an area of 50' X 80'. Northwest of the location a 3' x 50' stream traveled off of the location and into the pasture. East of the location produced water flowed measuring an area of 4' x 20'. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a remediation work plan to the NMOCD for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

General Information About: Sample 26902			
Section/ Township/Range	18 / 26 S / 28 E	Lat/Long	32.0429 / -104.1264
Elevation	3060	Depth	25
Date Collected	8/4/1987	Chlorides	146
Collector / Point of Collection	SEO / TS@25	Use	Well presently not in use
Formation	CAST	TDS	0

New Mexico Tech PRRC

LOCATION NUMBER	WATER LEVEL: BELOW LAND SURFACE (feet)	WATER LEVEL: DATE OF MEASUREMENT	YIELD (g.p.m.)	METHOD OF LIFT	USE OF WATER	REMARKS
25.30.9.100a	295+	Mar. 10, 1949	–	W	S	
21.330	268.0	do.	3	W	S	Northeast well of two. See analysis, Table 3.
21.330a	–	–	2	W	S	Southwest well of two.
25.31.21.000	290	Dec. 15, 1948	3	W	S	See analysis, Table 3.
26.24.9.331	65.3	Jan. 26, 1948	–	N	N	Abandoned. See analysis, Table 3.
10.240	20	–	10[1]	W	S	Driller: H. M. Curtis.
11.314	21.9	Jan. 22, 1948	5	W	S	See analysis, Table 3.
19.431	57.7	do.	5 R.	W	D & S	
28.411	–	–	–	W	S	North of highway. Driller: H. M. Curtis.
28.413	68.6	Jan. 22, 1948	2	W	S	Driller: Redman. See analysis, Table 3.
26.25.17.240	10.5	Nov. 19, 1949	3	W	S	See analysis, Table 3.
26.27.5.440	12.5	Dec. 3, 1948	3	W	S	
13.442	35+	do.	3	W	S	
26.28.2.112	21.2	Dec. 6, 1948	1½	W	S	Depth to water measured while pumping. See analysis, Table 3.

See explanation at beginning of table.
1 Measured Jan. 22, 1948.
