MONITORING WELL INSTALLATION AND GROUNDWATER MONITORING REPORT FOR APRIL AND JUNE 2010 WILMUTH NO. 1, SAN JUAN COUNTY, NEW MEXICO

1.0 INTRODUCTION

This report discusses the installation of four groundwater monitor wells by Tetra Tech, Inc. (Tetra Tech) in April 2010 at the ConocoPhillips Company (ConocoPhillips) Wilmuth No. 1 site located outside of Aztec, New Mexico (Site), and also presents the results of the baseline and second quarterly groundwater monitoring events conducted at the Site by Tetra Tech in April and June 2010.

The Site is located on private land leased to ConocoPhillips and is situated in Section 26, Township 31N, Range 11W, of San Juan County, New Mexico (**Figure 1**). A Site detail map is included as **Figure 2**.

1.1 Site Background

The Wilmuth No. 1 natural gas production well was spudded in 1958 by El Paso Natural Gas Company. Meridian Oil, Inc., a subsidiary of Burlington Resources, Inc. (Burlington), took over operation of the well on November 1, 1986. ConocoPhillips acquired Burlington on March 31, 2006.

A release of approximately 22 barrels (bbls) of produced water occurred within the bermed area around the produced water tank on May 17, 2001. Twenty bbls were later recovered. A release of condensate occurred on December 17, 2002 from a corrosion hole in the condensate tank. Burlington excavated a total of 85 cubic yards of impacted soil and disposed of it at JFJ landfarm, located in Aztec, NM.

During December, 2009, ConocoPhilips personnel notified the New Mexico Oil Conservation Division (NMOCD) of groundwater seeping into two separate areas under going excavation due to staining discovered during line tie in procedures. Four groundwater monitoring wells were subsequently installed under the supervision of Tetra Tech in April, 2010. Tetra Tech began quarterly sampling immediately following development of the wells by collecting a baseline round of groundwater samples on April 8, 2010. The most recent sampling event took place on June 9, 2010, and represents the second round of sampling conducted by Tetra Tech at the Site. The historical timeline is also presented in **Table I**.

1.2 Groundwater Monitor Well Installation

Between April 5 and April 7, 2010, Enviro-Drill Inc. of Albuquerque, New Mexico (EnviroDrill) installed four groundwater monitor wells at the Site under the supervision of Tetra Tech: MW-1, MW-2, MW-3, and MW-4. All wells were drilled using a CME-75 drill rig, hollow stem augers, and split-spoon sampling techniques; 25 feet of .010 polyvinylchloride (PVC) slotted screen was placed in each well. MW-1, MW-2 were installed

on April 6, 2010 to a total depth of 30 feet bgs. The depth to water was recorded at 5.21 and 6.48 feet below top of casing (TOC), respectively, during the first groundwater monitoring event. The screened interval was placed from 4.5 to 29.5 feet bgs in both MW-1 and MW-2. MW-4 was also installed on April 6, 2010 to a total depth of 35 feet bgs with depth to water recorded at 9.68 feet below TOC during groundwater monitoring conducted on April 8, 2010. The Screened interval was placed from 9.5 to 34.5 feet bgs in MW-4. Monitoring Well MW-3 was installed on April 7, 2010 to a total depth of 30 feet bgs with depth to water recorded at 6.37 feet below TOC. The screened interval was placed from 4.5 to 29.5 feet bgs in MW-3. Wells were constructed using 2-inch PVC casing, and were all above-ground completions set in three foot by three foot concrete pads with the exception of MW-1 which was installed flush with the ground surface. Monitor wells were installed with longer screen intervals and set deeper than most wells are typically completed to allow for possible collection of additional groundwater chemistry data, if necessary.

After installation, each monitor well was developed using a 1.5-inch diameter, polyethylene disposable bailer and/or a 1.5-inch diameter submersible poly-vinyl chloride purge pump. Approximately 50 gallons of water were purged from Monitor Wells MW-1, MW-2, and MW-4. Monitor Well MW-3 was purged of approximately 55 gallons. Purge water was contained in properly labeled 55 gallon drums on-Site and later disposed of on April 16, 2010 by Envirotech Inc at the Industrial Ecosystems Inc. (IEI) landfarm. Soil boring logs and well completion forms are included as **Appendix A**. A generalized geologic cross section for the Site is presented in **Figure 3**.

During soil boring activities conducted April 5 through 7, 2010, soil samples were collected from the soil borings for all four site monitoring wells. Soil samples were collected from MW-1 at depths of 7 to 9 feet bgs and from 11 to 13 feet bgs; MW-2 at depths of 1.5 to 3.0 feet bgs and from 9 to 11 feet bgs; MW-3 at depths of 1.5 to 3.0 feet bgs, 3.0 to 4.5 feet bgs and from 9 to 11 feet bgs; and from MW-4 at depths of 0 to 1.5 feet bgs, 1.5 to 3.0 feet bgs and from 9 to 11 feet bgs. Each soil sample was analyzed for major ions by EPA Method 300.0; for total mercury by EPA Method 7471A; dissolved metals by EPA Method 6010B; semivolatile organic compounds (SVOCs) by EPA Method 8270C; volatile organic compounds (VOCs) by EPA Method 8260B; and TPH by EPA Method 8015B. None of the soil analytes were detected in concentrations above OCD recommended action levels. Results of the soil analysis are shown in **Table 2** and **Appendix B**.

2.0 MONITORING SUMMARY, SAMPLING METHODOLOGY AND RESULTS

2.1 Monitoring Summary

A baseline groundwater quality monitoring event at the site was conducted on April 8, 2010. Prior to collection of groundwater samples from Monitor Wells MW-1, MW-2, MW-3 and MW-4, depth to groundwater in each well was determined. Results are displayed in **Table 3**.

The casings for Site monitoring wells were surveyed on April 8, 2010 using an arbitrary reference-elevation of 100 feet above mean sea level (amsl). The data obtained from the Site survey and from the April 2010

sampling event were used to create a groundwater elevation contour map for the Site (**Figure 4**). Using these data, it was determined that the groundwater flow direction at the Site is to the south/southwest at a gradient of 0.0124 feet per foot (ft/ft). A second groundwater elevation contour map was also prepared using data obtained June 9, 2010 during the second quarterly monitoring event at the site and can be seen as **Figure 5**. Groundwater elevation data obtained during June 2010 also indicates a groundwater flow to the south/southwest. Numerical groundwater elevation information from June 2010 is also included in **Table 3**.

2.2 Groundwater Sampling Methodology

During the baseline groundwater monitoring event, Site monitor wells were purged of at least 3 casing volumes of groundwater using a 1.5-inch diameter, polyethylene dedicated bailer. While bailing each well, groundwater parameter data such as temperature, pH, conductivity, total dissolved solids (TDS), oxidation-reduction potential (ORP) and dissolved oxygen (DO) were collected using a YSI 556 multi-parameter sonde and results were recorded on a Tetra Tech Water Sampling Field Form (**Appendix C**). Collected groundwater samples were placed in laboratory prepared bottles, packed on ice, and shipped with chain-of-custody documentation. Analysis of all groundwater samples collected during the April 2010 groundwater monitoring event were performed by Southern Petroleum Laboratory (SPL) of Houston, Texas.

During the April 2010 groundwater monitoring event, each groundwater sample collected was analyzed for major ions by EPA Method 300.0; SVOCs by EPA Method 8270C; VOCs by EPA Method 8260B; general chemistry (alkalinity, hardness, total dissolved solids, and pH by various methods); New Mexico Water Quality Control Commission dissolved metals by EPA Method 6010B; and TPH diesel range organics (DRO) and gasoline range organics (GRO) by EPA Method 8015B. Results of the April 2010 analyses are displayed in **Table 4**.

The second quarterly groundwater monitoring event at the Wilmuth No. 1 site was conducted on June 9, 2010. All site monitoring wells were again purged of 3 casing volumes, groundwater parameters were collected, samples were placed in laboratory prepared bottles, packed on ice and shipped with chain-of-custody documentation to SPL of Houston, Texas. Samples collected during the June 2010 sampling event were analyzed for benzene, toluene, ethylbenzene, total xylenes (BTEX) by EPA Method 8260B; chloride and sulfate by EPA Method 300.0; and dissolved manganese by EPA Method 6010B. This list of constituents was determined based on the analytical results from the groundwater baseline and initial site groundwater concerns. Results of the April 2010 and June 2010 groundwater monitoring events are summarized in **Table 5** and discussed in more detail in the following section.

2.3 Groundwater Sampling Analytical Results

The New Mexico Water Quality Control Commission (NMWQCC) mandates that groundwater quality in New Mexico be protected, and has issued groundwater quality standards in Title 20, Chapter 6, Part 2, Section 3103 of the New Mexico Administrative Code (20.6.2.3103 NMAC). Groundwater quality standards have been set for the protection of human health, domestic water supply, and irrigation use. Exceedences of NMWQCC groundwater quality standards in Site monitor wells are discussed below.

- **Dissolved Manganese**

- The groundwater quality standard for dissolved manganese is 0.2 micrograms per liter (mg/L). Groundwater collected from all site monitoring wells was found to be above standard for dissolved manganese during both April and June, 2010. Results can be seen summarized in Table 5.

- **Total Dissolved Solids**

- The groundwater quality standard for TDS is 1,000 mg/L. Groundwater collected from MW-1, MW-2 and MW-4, was found to contain TDS at concentrations greater than 1,000 mg/L during both the April 2010 baseline and June 2010 quarterly sampling events. Results were 1,780 mg/L, 1,120 mg/l and 1,900, respectively, during April of 2010 and 1,190 mg/L, 1,070 mg/L and 1,380 mg/L, respectively, during June 2010.

- **Sulfate**

- The groundwater quality standard for sulfate is 600 mg/L. Groundwater collected from MW-1 and MW-4 was found to be above standard for Sulfate during the baseline analyses in April of 2010 with results of 879 mg/L and 918 mg/L respectively. Sulfate concentrations were below standard in all site monitoring wells during the June 2010 monitoring event.

No other analyzed constituents, including BTEX, were found above NMWQCC groundwater quality standards in Site monitor wells during the April and June 2010 monitoring events.

The corresponding laboratory analytical reports for the April and June 2010 groundwater sampling events, including quality control summaries, are included in **Appendix D**.

3.0 CONCLUSIONS AND RECOMMENDATIONS

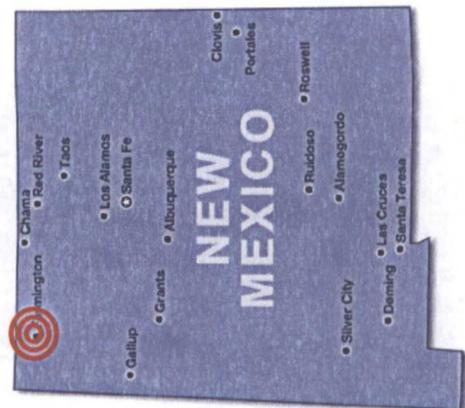

Tetra Tech has installed four groundwater monitoring wells at the Site and has conducted the baseline and second quarterly groundwater monitoring events at the Site. The groundwater monitoring wells will be sampled on a quarterly monitoring schedule, and the next groundwater monitoring event at the Site is scheduled for September 2010. The groundwater flow direction at the Site was determined to be to the south/southwest as of June 2010. Tetra Tech will continue to monitor the groundwater flow direction at the Site and will note any changes should they occur.

As a result of the suite of chemical analyses conducted on all groundwater monitor wells at the Site during April 2010, continued groundwater quality monitoring beyond BTEX analysis is recommended. In order to move toward Site closure, Tetra Tech will continue to monitor for BTEX, chloride, sulfate, TDS and dissolved manganese. Tetra Tech recommends the continuation of quarterly groundwater monitoring until sulfate, TDS, and dissolved manganese concentrations are also below NMWQCC standards, appear stable or reach regional background levels. Please contact Kelly Blanchard at 505-237-8440 or kelly.blanchard@tetrtech.com if you have any questions or require additional information.

TABLES

Table 1. Site History Timeline

Date/Time Period	Event/Action	Description/Comments
July 24, 1958 to August 11, 1958	Production Well Completion	Well spudded and completed by El Paso Natural Gas Company.
November 1, 1986	Change of Operator	Operator changed from El Paso Natural Gas Company to Meridian Oil Inc. (a subsidiary of Burlington Resources, Inc.)
May 17, 2001	Release	Due to a broken dump arm, 22 barrels (bbls) of produced water was released within the bermed area around the produced water tank. 20 bbls were said to be recovered.
December 17, 2002	Release	A corrosion hole in the bottom of a steel pit tank that collected fluids from the separator and condensate tank drain allowed an unknown volume of produced water and condensate to leak onto the ground. All fluids were contained inside the tank berm. Impacted gravel and soils were excavated and disposed of at JFJ Landfarm. Excavation dimensions were approximately 30 feet by 25 feet by 3 feet for a total of 85 cubic yards.
May 21, 2004	Workover Pit Proposal Approved	A lined workover pit was approved by Denny Faust of the NMOCD as detailed in Burlington Resources general pit construction plan dated April 26, 2004 which was also approved by the NMOCD.
March 31, 2006	Change of Operator	ConocoPhillips Company completed acquisition of Burlington Resources.
December 22 and 23, 2009	Potential for Groundwater Impacts Discovered	ConocoPhillips company notified Brandon Powell and Kelly Roberts of the OCD about groundwater seeping into two excavated areas on Site where discolored soils had been found during line tie in procedures. The type, volume and origin of the initial release was unknown. Groundwater samples were collected from the two areas and analyzed by Envirotech Inc. of Farmington, NM for benzene, toluene, ethylbenzene and total xylenes (BTEX), total petroleum hydrocarbons (TPH) and chloride. Analytical results indicate that BTEX and TPH are below NMWQCC groundwater standards; however, chloride was present at a concentration above the chloride standard of 250 mg/L with a concentration of 2,500 mg/L in the area of the excavation and a concentration of 950 mg/L in an trench associated with line tie-in procedures. Soil samples were collected from the same trench groundwater samples were collected from where discolored soil was present. The soil was analyzed by Envirotech for BTEX, TPH and Chloride. Analytical results for all soil samples were below NMOCD recommended soil action levels.
January 7, 2010	NMOCD Correspondence	C-141 Release Notification and Corrective Action form was submitted to the NMOCD by ConocoPhillips.
April 5, 2010 through April 7, 2010	Groundwater Monitoring Well Installation and Baseline Soil Sampling	Tetra Tech supervised the installation of 4 groundwater Monitoring Wells; MW-1, MW-2, MW-3 and MW-4, by Enviro-Drill Inc. of Albuquerque, NM. Each well was installed with 25 feet of screen. MW-1, MW-2 and MW-3 were all set at 30 feet below ground surface. MW-4 was set at 35 feet below ground surface. A confining layer of gray slitstone was found at depth in each of the 4 boring locations. Soil samples were collected from all 4 soil borings and analyzed for major ions, total metals, semi-volatile organic compounds (SVOCs), volatile organic compounds (VOCs) including BTEX, diesel range organics, and gasoline range organics. Analytical results for all soil samples were below NMOCD recommended soil action levels.
April 8, 2010	Baseline Groundwater Sampling	Tetra Tech conducted the initial groundwater sampling from site Monitoring Wells, MW-1, MW-2, MW-3 and MW-4. A baseline suite was completed including major ions, NMWQCC dissolved metals, SVOCs , VOCs including BTEX, diesel range organics, and gasoline range organics. All 4 site monitoring wells were below NMWQCC standards for BTEX constituents. All 4 wells were above standard for dissolved manganese. MW-1, MW-2 and MW-4 were also above standard for sulfate.
June 9, 2010	Quarterly Groundwater Monitoring Event	Quarterly groundwater sampling was conducted by Tetra Tech. Samples were collected from all site monitoring wells and analyzed for BTEX, dissolved manganese, chloride, sulfate, and TDS. All 4 site monitoring wells were below NMWQCC standards for BTEX constituents. Samples collected from all 4 site wells were above standard for dissolved manganese. Samples collected from MW-1, MW-2 and MW-4 were above standard for TDS.

Notes:

MW = monitor well
NMOCD = New Mexico Oil Conservation Division recommended action level

SVOCS = semi-volatile organic compounds
VOCs = volatile organic compounds

mg/kg - dry = milligrams per kilogram, analyzed after residual water removed from the soil
µg/kg - dry = micrograms per kilogram
P = phosphate
N = nitrogen

ND = not established above laboratory method detection limits
NE = not established
ND = not detected

Table 3. Groundwater Elevation Data Summary

Well ID	Total Depth (ft bgs)	Screen Interval (ft)	*Elevation (ft) (TOC)	Date Measured	Depth to Groundwater (ft below TOC)	Relative Groundwater Elevation
MW-1	30.00	4.5 - 29.5	95.8	4/8/2010	5.21	90.59
MW-2	30.00	4.5 - 29.5	95.8	4/8/2010	1.94	93.86
MW-3	30.00	4.5 - 29.5	96.32	6/9/2010	6.48	89.32
MW-4	35.00	9.5 - 34.5	98.7	4/8/2010	3.68	92.12
				6/9/2010	6.37	89.95
					3.39	92.93
					9.68	89.02 ⁽¹⁾
				6/9/2010	4.41	94.29

ft = Feet

TOC = Top of casing

bgs = Below ground surface

* = Elevation relative to an arbitrary 100 feet

(1) = Anomalous data point

Table 4. Groundwater Laboratory Analytical Results Summary, April 2010 Baseline Parameters

Constituent		Sample ID (samples collected on June 12, 2009)									
Ions	Method	Units	MW-1	Duplicate	MW-2	MW-3	MW-4	NMW/QCC Groundwater Quality Standard

Well ID MW-1

Job Name Wilmuth No. 1

Job No. 114-690153 Date 4/6/2010

Project Manager Kelly Blanchard

Well I.D. MW-1

Field Geologist C. Mathews and B. Lautes

Driller Enviro-Drill

Equipment CME 75

Materials

950 Pounds Silica Sand Filter Pack

50 Pounds Baroid® 3/8" bentonite chip hole plug Bentonite Seal

 Gallons Grout

480 Pounds Quikcrete® Concrete

 Feet of native fill/ slough

7.5 Feet of 2 inch pvc Blank Casing

25 Feet of 2 inch .010 pvc Slotted Screen

 Feet of Outer Casing

0.5 Feet of 2 inch PVC end cap Sump/ Silt Trap

Placement Method Pour

Notes Casing and screen joint type - flush thread

Development

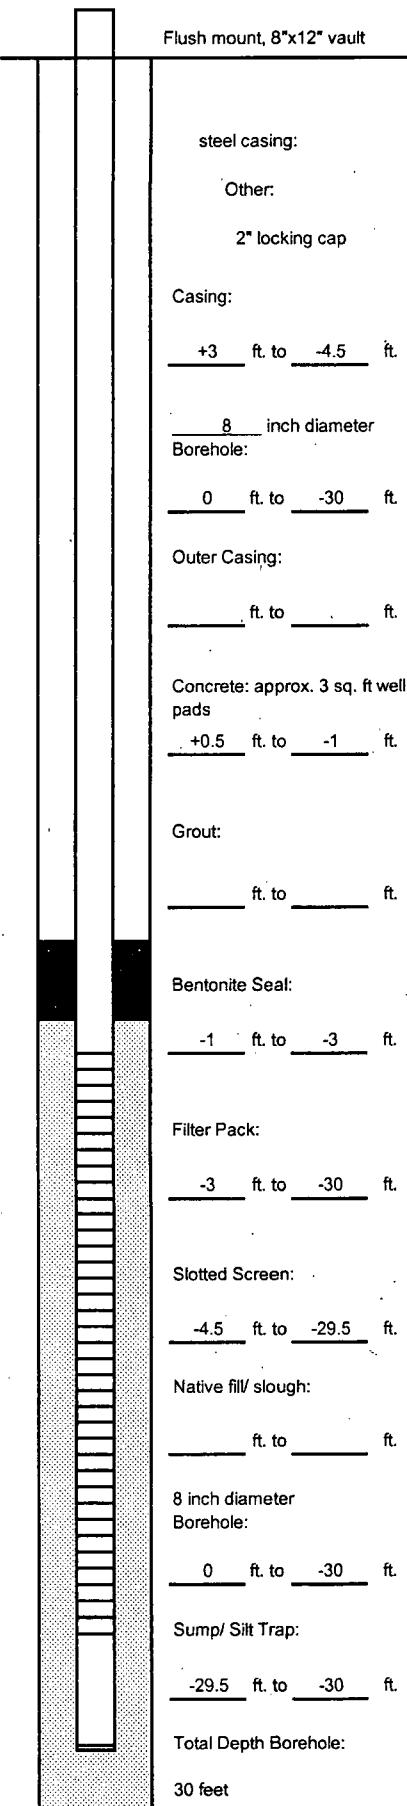

Method hand bailing

Date 4/7/2010

Amount Purged 50 gallons

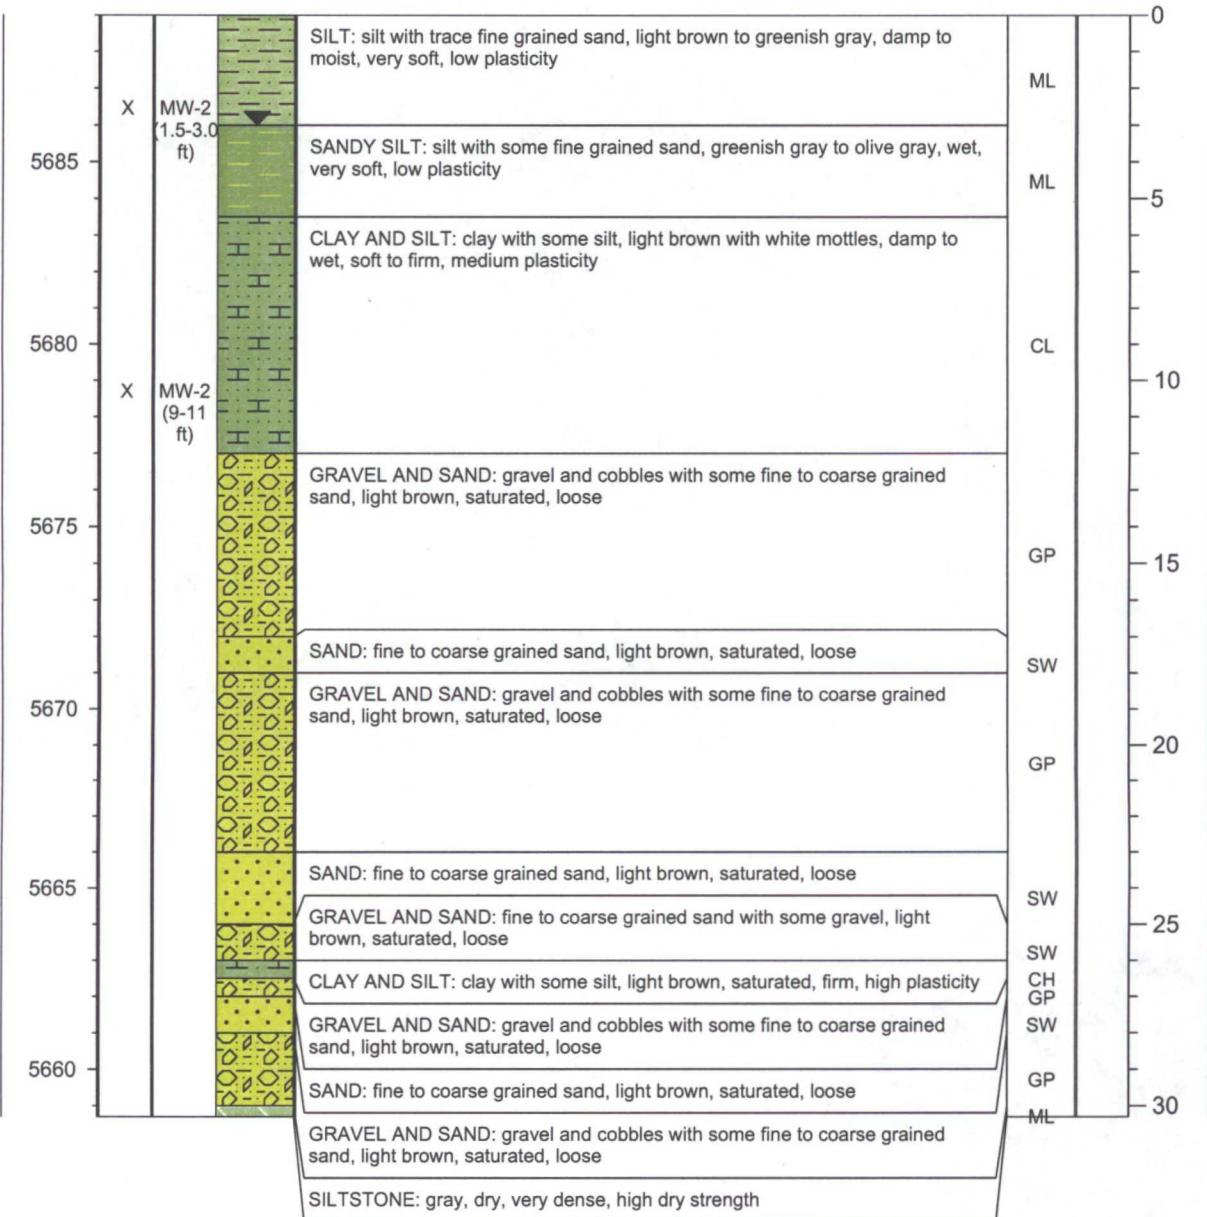

Notes H2O contains fines even after bailing 50 gal.

Flush mount, 8"x12" vault

I. SAMPLE RECEIPT:

All samples were received intact. The internal ice chest temperatures were measured on receipt and are recorded on the attached Sample Receipt Checklist.

II: ANALYSES AND EXCEPTIONS:

There were no exceptions noted.

III. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report (" mg\kg-dry " or " ug\kg-dry ").

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Some of the percent recoveries and RPD's on the QC report for the MS/MSD may be different than the calculated recoveries and RPD's using the sample result and the MS/MSD results that appear on the report because, the actual raw result is used to perform the calculations for percent recovery and RPD.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

QC results presented in the QC Control Data have been rounded. RPD and percent recovery values calculated by the SPL LIMS system are derived from QC data prior to the application of rounding rules. Also, MS/MSD % recoveries are calculated by the SPL LIMS using any detected value greater than the MDL.

Legend

(S) - Indicates analyte is a surrogate

Qualifier	Qualifier Description
MI	Matrix Interference
I	Estimated value, between MDL and PQL (Florida)
JN	The analysis indicates the presence of an analyte
C	MTBE results were not confirmed by GCMS
NC	Not Calculated - Sample concentration > 4 times the spike
*	Recovery/RPD value outside QC limits
E	Results exceed calibration range
H	Exceeds holding time
J	Estimated value
Q	Received past holding time
B	Analyte detected in the Method Blank
N	Recovery outside of control limits
D	Recovery out of range due to dilution
NC	Not Calculable (Sample Duplicate)
P	Pesticide dual column results, greater than 25%
TNTC	Too numerous to count

Sample Receipt Checklist

WorkOrder:	H10040326	Received By	LOG
Date and Time	04/13/2010 09:30	Carrier Name:	FEDEXS
Temperature:	3.0°C	Chilled By:	Not Chilled

1. Shipping container/cooler in good condition? YES
2. Custody seals intact on shipping container/cooler? YES
3. Custody seals intact on sample bottles? Not Present
4. Chain of custody present? YES
5. Chain of custody signed when relinquished and received? YES
6. Chain of custody agrees with sample labels? YES
7. Samples in proper container/bottle? YES
8. Samples containers intact? YES
9. Sufficient sample volume for indicated test? YES
10. All samples received within holding time? YES
11. Container/Temp Blank temperature in compliance? YES
12. Water - VOA vials have zero headspace? VOA Vials Not Present
13. Water - Preservation checked upon receipt(except VOA*)? Not Applicable

*VOA Preservation Checked After Sample Analysis

I. SAMPLE RECEIPT:

All samples were received intact. The internal ice chest temperatures were measured on receipt and are recorded on the attached Sample Receipt Checklist.

Upon receipt of your samples, the lab received three sets of trip blanks however there was only one written on the COC. The lab logged in all trip blanks for BTEX analysis. The lab received one of the 16oz unpreserved plastic containers for sample "MW-3" with the lid off. In order to perform the requested analysis, the lab split sample from the 32oz unpreserved plastic into an unpreserved 16oz plastic to replace the container that was received with the lid off. In addition, the lab received pH out of method holding time.

II: ANALYSES AND EXCEPTIONS:

Volatile Organics analysis (8260B):

The results for 2-chloroethyl vinyl ether should be considered estimated due to compound decomposition as a result of acid preservation. The result for this compound is reported as "ND J" for all samples in the report.

Sample ID "MW-1" (SPL ID: H10040214001) was randomly selected for use in SPL's quality control program for Batch ID: MSV/1746. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits for 2-Chloroethyl vinyl ether due to compound decomposition as a result of acid preservation. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

SW8015B - Diesel Range Organics analysis:

Due to limited sample volume, a Matrix Spike (MS) or Matrix Spike Duplicate (MSD) was not extracted for Batch ID: EXTO/1609. A Laboratory Control Sample (LCS) and a Laboratory Control Sample Duplicate (LCSD) were extracted with the analytical batch and serve as the batch quality control (QC). The LCS and LCSD recovered acceptably and precision criteria were met.

SM4500 - Nitrate+Nitrite as Nitrogen:

Your sample ID "MW-3" (SPL ID: H10040214003) was randomly selected for use in SPL's quality control program for Batch ID WETC/2872. The Matrix Spike (MS) and Matrix Spike Duplicate (MSD) recoveries were outside of the advisable quality control limits due to matrix interference. A Laboratory Control Sample (LCS) was analyzed as a quality control check for the analytical batch and all recoveries were within acceptable limits.

III. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report (" mg\kg-dry " or " ug\kg-dry ").

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Some of the percent recoveries and RPD's on the QC report for the MS/MSD may be different than the calculated recoveries and RPD's using the sample result and the MS/MSD results that appear on the report because, the actual raw result is used to perform the calculations for percent recovery and RPD.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

This report shall not be reproduced except in full, without the written approval of the laboratory. The reported results are only representative of the samples submitted for testing.

SPL, Inc. is pleased to be of service to you. We anticipate working with you in fulfilling all your current and future analytical needs.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package has been authorized by the Laboratory Manager or by his designee, as verified by the following signature.

QC results presented in the QC Control Data have been rounded. RPD and percent recovery values calculated by the SPL LIMS system are derived from QC data prior to the application of rounding rules. Also, MS/MSD % recoveries are calculated by the SPL LIMS using any detected value greater than the MDL.

QC results presented in the QC Control Data have been rounded. RPD and percent recovery values calculated by the SPL LIMS system are derived from QC data prior to the application of rounding rules. Also, MS/MSD % recoveries are calculated by the SPL LIMS using any detected value greater than the MDL.

Legend

(S) - Indicates analyte is a surrogate

Qualifier	Qualifier Description
MI	Matrix Interference
I	Estimated value, between MDL and PQL (Florida)
JN	The analysis indicates the presence of an analyte
C	MTBE results were not confirmed by GCMS
NC	Not Calculated - Sample concentration > 4 times the spike
*	Recovery/RPD value outside QC limits
E	Results exceed calibration range
H	Exceeds holding time
J	Estimated value
Q	Received past holding time
B	Analyte detected in the Method Blank
N	Recovery outside of control limits
D	Recovery out of range due to dilution
NC	Not Calculable (Sample Duplicate)
P	Pesticide dual column results, greater than 25%

Sample Receipt Checklist

WorkOrder:	H10040214	Received By	LOG
Date and Time	04/10/2010 09:30	Carrier Name:	FEDEXP
Temperature:	2.0°C	Chilled By:	Water Ice

1. Shipping container/cooler in good condition?
869526690610-2.0c/ 869526690573-3.0c/ 869526690584-3.0c YES
2. Custody seals intact on shipping container/cooler? YES
3. Custody seals intact on sample bottles? Not Present
4. Chain of custody present? YES
5. Chain of custody signed when relinquished and received? YES
6. Chain of custody agrees with sample labels?
Lab received three sets of trip blanks but COC only shows one. Logged in all trip blanks for BTEX analysis. NO
7. Samples in proper container/bottle? YES
8. Samples containers intact?
Lab received one of the 16oz unpreserved plastic containers from sample MW-3 with the lid off. Split sample from the 32oz unpreserved plastic into an unpreserved 16oz plastic to replace the container that was received with the lid off. NO
9. Sufficient sample volume for indicated test? YES
10. All samples received within holding time?
Lab received pH out of method holding time. NO
11. Container/Temp Blank temperature in compliance? YES
12. Water - VOA vials have zero headspace? YES
13. Water - Preservation checked upon receipt(except VOA*)? YES

*VOA Preservation Checked After Sample Analysis

I. SAMPLE RECEIPT:

All samples were received intact. The internal ice chest temperatures were measured on receipt and are recorded on the attached Sample Receipt Checklist.

II: ANALYSES AND EXCEPTIONS:

Per the Conoco Phillips TSM Revision 0, a copy of the internal chain of custody is to be included in final data package. However, due to LIMS limitations, this cannot be provided at this time.

There were no exceptions noted.

III. GENERAL REPORTING COMMENTS:

Results are reported on a wet weight basis unless dry-weight correction is denoted in the units field on the analytical report (" mg\kg-dry " or " ug\kg-dry ").

Matrix spike (MS) and matrix spike duplicate (MSD) samples are chosen and tested at random from an analytical batch of "like" matrix to check for possible matrix effect. The MS and MSD will provide site specific matrix data only for those samples which are spiked by the laboratory. Since the MS and MSD are chosen at random from an analytical batch, the sample chosen for spike purposes may or may not have been a sample submitted in this sample delivery group. The validity of the analytical procedures for which data is reported in this analytical report is determined by the Laboratory Control Sample (LCS) and the Method Blank (MB). The Laboratory Control Sample (LCS) and the Method Blank (MB) are processed with the samples and the MS/MSD to ensure method criteria are achieved throughout the entire analytical process.

Some of the percent recoveries and RPD's on the QC report for the MS/MSD may be different than the calculated recoveries and RPD's using the sample result and the MS/MSD results that appear on the report because, the actual raw result is used to perform the calculations for percent recovery and RPD.

Any other exceptions associated with this report will be footnoted in the analytical result page(s) or the quality control summary page(s).

Please do not hesitate to contact us if you have any questions or comments pertaining to this data report. Please reference the above Certificate of Analysis Number.

Legend

(S) - Indicates analyte is a surrogate

Qualifier	Qualifier Description
MI	Matrix Interference
I	Estimated value, between MDL and PQL (Florida)
JN	The analysis indicates the presence of an analyte
C	MTBE results were not confirmed by GCMS
NC	Not Calculated - Sample concentration > 4 times the spike
*	Recovery/RPD value outside QC limits
E	Results exceed calibration range
H	Exceeds holding time
J	Estimated value
Q	Received past holding time
B	Analyte detected in the Method Blank
N	Recovery outside of control limits
D	Recovery out of range due to dilution
NC	Not Calculable (Sample Duplicate)
P	Pesticide dual column results, greater than 25%
TNTC	Too numerous to count
