Mike,

The below analytical results are for the captioned location. There are two analytical reports because the hold time for TPH & BTEX on the samples expired and I had to resample on 11/1/2011. Based on the analytical results, Yates would like to propose excavating an additional 12" of impacted soils from the production pad; these soils would be taken to an NMOCD approved facility. I would like to request these results be accepted for closure based on additional removal of the impacted soils. When that work is completed I would then submit a Form C-141, Final Report and supporting documentation. If there are any questions, please contact me
