

Yates Petroleum Corporation

Santa Fe Land SWD #1

Section 17, T19S-R26E

Eddy County, New Mexico

June 1, 2012

V. Scope of Work (previously approved 5/14/12)

Upon approval of this work plan and based on the enclosed analytical results, Yates Petroleum Corp. will have a contractor excavate 6' from sample area S1 and 5'3" from sample area S2 of impacted soil. Impacted soils will be taken to an NMOCD approved facility for disposal. At this time the S2 area will be reevaluated because of a solid rock layer that was present when initial delineation was done.

Addendum to Scope of Work

As stated in the original "Scope of Work" the S1 area has been cleared of 6' of impacted material which will be backfilled with like material. The S2 area has been reevaluated and there is a solid natural rock layer at approximately 5'3" which impeded the movement of chlorides any further down. All impacted material has been removed above the rock layer and hauled to an NMOCD approved facility for disposal and will be backfilled with like material.
