My apologies for this delays in this project being completed in a more timely manner, per our November 29, 2011 meeting Yates will have a contractor excavate an the top two (2) feet of soils and stock pile and then excavate an additional three (3) feet of impacted soils from the release area. All impacted soils will be taken to an NMOCD approved facility. When a contractor is scheduled and work is complete the areas will be backfilled with stockpiled and clean soils and Yates will submit a Form C-141 Final report requesting closure.

Thank you.

Robert Asher
