Mr. Mike Bratcher
Environmental Engineer Specialist
Oil Conservation Division, District 2
1301 West Grand Avenue
Artesia, New Mexico 88210

Re: Closure Report for the COG Operating LLC., Red Lake Sand Unit #45 Flow Line, Unit O, Section 20, Township 17 South, Range 28 East, Eddy County, New Mexico.

Mr. Bratcher:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the Red Lake Sand Unit #45 flow line located in Unit O, Section 20, Township 17 South, Range 28 East, Eddy County, New Mexico (Site). The spill site coordinates are N 32.81127°, W 104.19473°. The site location is shown on Figures 1 and 2.

Background

According to the State of New Mexico C-141 Initial Report, the leak was discovered on August 29, 2010, and released approximately ten (10) barrels of produced fluid from a steel flow line and none of the fluids were recovered. To alleviate the problem, COG personnel repaired the flow line. The spill initiated north of a lease road migrating 185'.0' north into the pasture, with a width ranging to 2.0' to 20.0'. The initial C-141 form is enclosed in Appendix A.

Groundwater

No water wells were listed within Section 20. According to the NMOCD groundwater map, a well is located in Section 19 with a depth to water of 191' below surface. The USGS shows a well in Section 22 will a depth to water of 79' below surface. Based on the site location and NMOCD groundwater map, the average depth to groundwater in this area is greater than 100' below surface. The well reports are shown in Appendix B.

Tetra Tech

1910 North Big Spring, Midland, TX 79705

Tel 432.682.4559 Fax 432.682.3946 www.tetra.tech.com

Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 5,000 mg/kg.

Soil Assessment and Analytical Results

On September 1, 2010, Tetra Tech personnel inspected and sampled the spill area. Five (5) auger holes (AH-1 through AH-5) were installed using a stainless steel hand auger to assess the impacted soils. Select samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix C. The results of the sampling are summarized in Table 1. The auger hole locations are shown on Figure 3.

Referring to Table 1, all of the samples were below the RRAL for TPH and BTEX. Chloride impacted soils were detected in all of the auger holes. Auger holes (AH-4 and AH-5) were vertically defined at 4.0' (220 mg/kg) and 6.0' (<200 mg/kg), respectively. The remaining auger holes (AH-1, AH-2 and AH-3) were not vertically defined.

In order to delineate the chloride concentrations, soil borings were installed utilizing an air rotary drilling rig. On February 22, 2011, Tetra Tech personnel supervised the installation of soil borings (SB-1 through SB-3). The soil borings were installed to total depths of 40.0' to 50.0' below surface. Referring to Table 1, the chloride impact was vertically defined and declined with depth. The area of SB-1 (AH-1) had the deepest chloride impact, with chloride concentrations significantly declining at 30.0' to 1,250 mg/kg. Soil borings SB-2 (AH-2) and SB-3 (AH-3) did show a shallow impact to the soils to a depth of approximately 3.0' and 7.0', respectively. The soil boring locations are shown on Figure 3.

TETRA TECH

Closure Activities

Based on the approved work plan, Tetra Tech personnel supervised the excavation of the impacted soil at the site. The final excavation depths were met as proposed in the approved work plan. Once excavated to the appropriate depths, the excavation was backfilled with clean soil to grade. In the area of SB-1, a 40 mil liner was installed at 4.0' below surface and backfilled to grade. A total of 1,500 cubic yards of soil were excavated and hauled to CRI Inc. for proper disposal. The excavation depths are highlighted in Table 1 and shown on Figure 4.

Based on the remedial activities performed, COG request closure of the site. A copy of the C-141 (Final) is included in Appendix A. If you have any questions or comments concerning the remedial activities, please call at (432) 682-4559.

Respectfully submitted,
TETRA TECH

Ike Tavaréz
Project Manager, PG

Describe Cause of Problem and Remedial Action Taken.*

A hole developed in the Red Lake Sand Unit #45 steel flowline due to corrosion. The steel flowline has been repaired and we are in the process of replacing all steel flowlines to poly flowlines.

Describe Area Affected and Cleanup Action Taken.*

Tetra Tech personal inspected the site and collected samples to define the spills extent. Soil that exceeded the RRAL was removed to the depths stated in the approved work plan and hauled away for proper disposal. The site was then brought up to surface grade with clean backfill material. Tetra Tech has prepared a closure report and submitted it to the NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			
If a Watercourse was Impacted, Describe Fully.*					

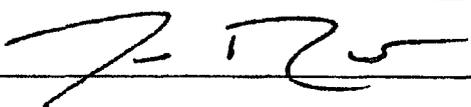

Describe Cause of Problem and Remedial Action Taken.*

A hole developed in the Red Lake Sand Unit #45 steel flowline due to corrosion. The steel flowline has been repaired and we are in the process of replacing all steel flowlines to poly flowlines.

Describe Area Affected and Cleanup Action Taken.*

Initially 10bbls of produced fluid was released from the flowline and we were unable to recover any fluid with a vacuum truck. The dimensions of the spill area are 20' x 120' in the pasture directly adjacent to the ruptured flowline. (The closest well location to the release is the Red Lake Sand Unit #43. 330' FSI. 1650' FNL. Unit O. Sec. 20-T17S-R28E. Eddy Co., NM. B-8435. API# 30-015-33196). Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a remediation work plan to the NMOCD prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 17 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc

 Dr. Blair Leftwich, Director
 Dr. Michael Abel, Project Manager

Standard Flags

B - The sample contains less than ten times the concentration found in the method blank.

Samples for project COG/Red Lake Sand Unit #45 were received by TraceAnalysis, Inc. on 2011-02-23 and assigned to work order 11022415. Samples for work order 11022415 were received intact at a temperature of 4.0 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
Chloride (Titration)	SM 4500-Cl B	66849	2011-02-28 at 08:41	77937	2011-02-28 at 11:43
Chloride (Titration)	SM 4500-Cl B	66863	2011-02-28 at 09:49	77987	2011-03-01 at 10:48
Chloride (Titration)	SM 4500-Cl B	66863	2011-02-28 at 09:49	77988	2011-03-01 at 10:49
Chloride (Titration)	SM 4500-Cl B	66863	2011-02-28 at 09:49	77989	2011-03-01 at 10:50

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11022415 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 36 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Standard Flags

B - The sample contains less than ten times the concentration found in the method blank.

Case Narrative

Samples for project COG/Red Lake Sand Unit #45 were received by TraceAnalysis, Inc. on 2010-09-10 and assigned to work order 10091321. Samples for work order 10091321 were received intact at a temperature of 3.7 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	63055	2010-09-15 at 08:15	73591	2010-09-15 at 09:19

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 10091321 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Analytical Report

Sample: 244359 - AH-1 0-1'

Laboratory: Midland	Analytical Method: SM 4500-Cl B	Prep Method: N/A
Analysis: Chloride (Titration)	Date Analyzed: 2010-09-21	Analyzed By: AR
QC Batch: 73690	Sample Preparation: 2010-09-15	Prepared By: AR
Prep Batch: 63077
