Was a Watercourse Reached? <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

N/A

Describe Cause of Problem and Remedial Action Taken.*

At the Cotton Draw Unit 153 Battery, the scada pack battery lost connection after blowing a fuse that was caused by the cold weather, resulted in a 15 barrel spill of produced water.

Describe Area Affected and Cleanup Action Taken.*

At the Cotton Draw Unit 153 Battery, the scada pack battery lost connection after blowing a fuse that was caused by the cold weather, resulted in a 15 barrel spill of produced water. After the battery failed the water transfer pump turned off which allowed the water tanks to fill up and overflow. By the time the night rider arrived the produced water was spilling over into the lined containment. The night rider immediately contacted the pumper who then contacted a wash crew and vacuum truck. They washed and cleaned the containment, recovering 15 barrels of produced water.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
