13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Chevron U.S.A., Inc. request administrative approval to allow for the surface commingling of oil, gas, and water production from the 100% Chevron batteries and wells, the B.F Harrison 2 lease into the B.F Harrison 1 Battery. The commingled production from the two (2) batteries will include the following pools:

NW TEAGUE DEVONIAN, pool # 58365; N TEAGUE WOLFCAMP, pool # 96961; N TEAGUE TUBB, pool # 96315; N TEAGUE DRK-ABO, pool # 96313; N TEAGUE LOWER PADDOCK-BLINEBRY, pool # 85980; LANGLIE MATTIX N, 7RVR QN G/B, pool # 37240; N TEAGUE FUSSELLMAN, pool # 58590; SW TEAGUE GLORIETA UPPER PADDOCK, pool # 58595; N TEAGUE LOWER PADDOCK-BLINEBRY ASSOC, pool # 96314.

Chevron plans to pipe production from the B.F. Harrison B2 header, to the B.F. Harrison B1 header. The oil, water, and gas production at the B.F. Harrison 2 will thus be combined, separated, and sold with production from the B.F. Harrison 1. A 3-phase tester separator will remain at the B.F. Harrison 2 for regulatory well testing. The remaining battery tanks and equipment will be removed. The once sweet, B.F. Harrison 2 battery, is now sour, eliminating the need to maintain separate production, analysis included in package. The B.F. Harrison 1 Battery can easily handle the fluid production from both batteries. Work is expected to begin approximately July 2013.
