If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\*

A 1" valve was leaking by filling up containment and running over into lined dike. Replaced valve to prevent reoccurrence.

Describe Area Affected and Cleanup Action Taken.\*

Initially 14bbls of produced fluids were released due to a leaking valve. We were able to recover 14bbls of produced fluids with a vacuum truck. The spill was completely contained inside the lined facility walls. All free fluid has been recovered. Any contaminated gravel has been removed, the liner has been steam cleaned, and we have replaced with fresh gravel as necessary. This facility has been returned to its prior condition.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC D rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC D marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC D acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
