Describe Cause of Problem and Remedial Action Taken.*: Got alarm call out at Russel Turner injection plant around 1:00am, for Low header discharge pressure. Drove to Injection plant and pressures on headers were on zero, I Obie and Isidro drove around field and found location Turner B #47 where 3" high pressure victaulic clamp had blown off steel line.

Describe Area Affected and Cleanup Action Taken.*: From leak source East to West the impacted area is 20' x 170' all on location inside berm. From leak source outside berm from East to North West impacted area is 3' x 806', this impacted area was in arroyo. Replaced all high pressure Victaulic clamps and rubbers on steel line and return to injecting.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
