ARTESIA

At the Todd 36-13 production location, a water transport driver ran over a steel flow line resulting in a spill of 6bbls of oil and 4bbls of produced water.

Describe Area Affected and Cleanup Action Taken.\*

At the Todd 36-13 production location, a water transport driver ran over a steel flow line resulting in a spill of 6bbls of oil and 4bbls of produced water. The trucks were delivering fresh water to the Aldabra frac pond when one of them ran over the steel flow line connection. The company notified Devon PIC and arrangements were then made to shut the well in and attempt to pick up fluid. No fluid was recovered.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
