RECEIVED

Describe Cause of Problem and Remedial Action Taken.*
The heater treater pressured up and blew out the gasket on the bottom man-way hatch. The crews switched the production stream out of the heater treater and replaced the failed gasket.

Describe Area Affected and Cleanup Action Taken.*
The spill impacted approximately 4,516 sq.ft. of caliche pad with oil saturation ranging from 10 to 12 inches in depth. The release misted an area measuring approximately 15,400 sq. ft. in a previous remediated area that had just recently been re-seeded. The misted area averaged approximately 2" in saturation depth. All of the free standing fluid was recovered and a roustabout crew covered the stained area with dry dirt. The spill area will be cleaned up in accordance to the NMOCD and BLM remediation guidelines.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
