By Whom? Tony Savoie						Date and Hour: 4/9/14 8:00 a.m.							
Was a Watercourse Reached? ☐ Yes ☒ No						If YES, Volume Impacting that OleonSERVATION ARTESIA DISTRICT							
If a Watercou	irse was Im	pacted, Descr	be Fully.*	:					SEP 12	2014			
Describe Cause of Problem and Remedial Action Taken.* A valve was discovered closed going to the scrubber on the facility flare line. The vessels pressured up sending crude oil out the flare line. The valves were restored to normal operations. Describe Area Affected and Cleanup Action Taken.* The spill impacted an area approximately 1300 ft. X 300 ft. with a fine mist that covered the vegetation and the surface of the soil with less than 1/8" if saturation. The spill also misted just the vegetation in an area approximately 1800 ft. X 400 ft. The vegetation in the immediate area around the flare line was washed down with a soap and micro-blaze mixture on 4/9/14. The site was reviewed again on 4/23/14; there was no residue visible on the soil surface and only light to no residue visible on the vegetation, there was no dead vegetation observed. A series of soil samples will be collected from the surface of the impacted area to determine any further remediation required. Confirmation soil samples collected on May 15, 2014, indicated soil within the misted area had not been affected above NMOCD regulatory standards. No residue was visible on soils or vegetation within the misted area, suggesting the application of soap and micro-blaze had been effective in mitigating any impacts. Please reference the attached Remediation Summary and Site Closure Request for detail of Remediation Activities.
