If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

During the installation of a flange on injection line nearest well WBDU 75 the line was in a bind resulting in the fiber glass line to break. The valve upstream was closed and a vacuum truck was dispatched to pick-up fluid.

Describe Area Affected and Cleanup Action Taken.* The entire release was contained inside the ditch line. After the standing fluid was picked up a track-hoe was utilized to start removing contaminated soil inside ditch line. A hand shoveling crew was utilized to remove contamination near and under the pipelines. The release area was mapped and samples collected and sent to a commercial laboratory for analysis.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
