**APPLICATION FOR CENTRAL TANK BATTERY, LEASE COMMINGLE,
OFF LEASE MEASUREMENT, SALES & STORAGE**

Commingling proposal for Limousine leases:

Proposal for Morgan Fee Com #1H & Cedar Canyon 27 State Com #4H

OXY USA INC is requesting approval for Central Tank Battery, Lease Commingle, Off Lease Measurement, Sales, & Storage from the following wells:

Fee Well

Pool: Corral Draw; Bone Spring (96238)

WELL NAME	API #	LOCATION	BOPD	OIL GRAVITY	MSCFD	BTU
MORGAN FEE COM #001H	30-015-39968	Sec21,T24S R29E	98	41.1	284	

State Lease: VO3983-0003

Pool: Pierce Crossing; Bone Spring (96473)

WELL NAME	API #	LOCATION	BOPD	OIL GRAVITY	MSCFD	BTU
CEDAR CANYON 27 STATE COM 4H	30-015-42063	Sec 27,T24S R29E	414	40	858	

A map is enclosed showing the leases and well locations in Section 21, T24S, R29E.

Oil & Gas metering:

Morgan Fee Com central tank battery is located in Township 24S, Range 29 E, Section 21 in Eddy County, New Mexico.

Oil, gas and water volumes from each well routed to Morgan Fee Com central tank battery will be routed to its dedicated test separator. The test separators at the battery will be utilized to process the incoming fluids while oil, water and gas measurement will be achieved by individual meters associated with the separator. Separate well tests would therefore not be required due to availability of dedicated test separators and meters at the facility.

The oil production from the wells listed in the list will be commingled, measured and sold on lease using a LACT Unit. Produced water will be measured through a turbine meter and trucked from the lease. The gas will be sold after it is measured by Oxy check meter located at the lease. The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications. The BLM and OCD will be notified of any future changes in the facility

Process and Flow Descriptions:

Please see attached block flow diagram for the Morgan Fee Com CTB. The flow route of produced fluids is shown in detail along with size of each vessel.

The commingling of production is in the interest of conservation and waste and will result in the most effective economic means of producing the reserves in place from the affected wells and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce operating expenses as well as reduce the surface facility footprint and overall emissions.

OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. These applications will be submitted separately for approval per NMOCD regulations.
