Describe Cause of Problem and Remedial Action Taken.*

The pulling unit crew was drilling out the last frac plug when the swivel broke down, which took 1 hour to replace. The crew resumed operations by breaking circulation and continued to drill out the plug. The Devon consultant noticed Frac Tank #1 on the far south, which was being flowed into, had flames coming from the top of the tank. This caused the fire to spread to the other two tanks. They immediately shut down operations and secured location, accounting for everyone. The Loving Fire Department was called and they were able to extinguish the fires. No injuries or spills occurred.

Describe Area Affected and Cleanup Action Taken.*

Tanks have been cleared from location. No further actions required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
