If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
While in final stages of drilling this well, the Qmax man was not paying attention to his fluid levels, which caused the overflow bins to overflow.

Describe Area Affected and Cleanup Action Taken.*
The leak affected 561 sq. ft. of well pad in the southwest corner of the location. The impacted area was excavated to 6 inches below ground surface. Samples were collected from the excavation, field tested, and sent to a commercial laboratory for chloride analyses. Impacted soils were removed to a NMOCD approved disposal facility. The excavation was backfilled with clean imported caliche and leveled.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
