Subject: PLU 274 Release
Attachments: photo.jpg

All,

BOPCO EHS was notified of a release at the PLU 274 Battery. A connection on the water leg of the heater treater failed releasing fluid to the ground surface. All of the free standing fluid remained inside the firewall containment area. A small area south of the production equipment does have some overspray, this area will be micro blazed. I will follow up with an initial C-141, if you have any questions please let me know. Thanks

13 barrels of oil was released

9 barrels of PW was released

5 barrels of fluid was recovered by vacuum truck.
