Describe Cause of Problem and Remedial Action Taken.*

A small hole on the underside of the Poseidon tank may have been caused by a power washer which caused the initial leak, then another hole was discovered in the secondary containment caused by an anchor. Vacuum trucks were used to recover the produced water.

Describe Area Affected and Cleanup Action Taken.*

The rest of the water in the tank was transferred to another tank at the Trionyx location so the hole may be mended. Vacuum trucks were used to recover the produced water. Alfredo's will take soil samples once the tank has been moved and remediation will take place accordingly.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
