1/4" nipple broke on top of discharge assembly on centrifugal pump. The nipple has been replaced with heavier grade to prevent reoccurrence.					
Describe Area Affected and Cleanup Action Taken.*					
Initially 20bbls of produced water was released inside the facility which is lined with a 40mil liner. All standing fluid was contained inside the facility firewalls. We were able to recover 19bbls with a vacuum truck. The spill measured an area of 45' x 165' inside the dike walls of the lined facility. Contaminated gravel has been removed and replaced with fresh gravel as necessary. The SWD has been returned to its prior condition.					
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Gentlemen,

For your records, I have attached a C-141 Final Report for a spill that occurred last year on 10/13/2010. As I was going through some old reports I wanted to be sure that you had a Final Report for this spill. It occurred inside a lined facility and was cleaned up shortly after the spill.

Thank you,

### **Joshua Russo**
