Describe Cause of Problem and Remedial Action Taken.*

High tank levels caused produced water tank to overflow into surrounding lined containment. Well was immediately shut in to prevent further release and excess water was hauled off to reduce tank levels.

Describe Area Affected and Cleanup Action Taken.*

8 BBLS of produced water was released into surrounding lined containment. All the released fluid was recovered via vacuum truck. No holes were found in the liner. No further action required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
