Describe Cause of Problem and Remedial Action Taken.\*

Failure of a segment of the six (6) low pressure steel pipeline resulted in the release of an unknown volume of a mixture of natural gas, crude oil, and produced water. Following the discovery of the release the pipeline was fitted with a temporary clamp to mitigate the release.

Describe Area Affected and Cleanup Action Taken.\* Remediation activities conducted at the Tunstil #1286 release site met the objectives set forth by the NMOC D and BLM Carlsbad Field office. Soil samples collected from the excavation were analyzed by an NMOC D - approved laboratory, and concentrations of BTEX, TPH, and chlorides were below the applicable regulatory remediation action levels established for the site. Based on these analytical results, Basin recommends Southern Union provide the NMOC D Artesia District Office and the BLM Carlsbad Field office a copy of this Remediation Summary & Risk-Based Soil Closure Request and request the NMOC D to grant closure to the Tunstil #1286 release site.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC D rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC D marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC D acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
