Source of Release Transfer Pump		Date and Hour of Occurrence 03/13/2010	Date and Hour of Discovery 03/13/2010
Was Immediate Notice Given? ☒ Yes ☐ No ☐ Not Required		If YES, To Whom? Larry Johnson - OCD Geoffrey Leking - OCD	
By Whom? Josh Russo		Date and Hour 03/15/2010 4:59 p.m.	
Was a Watercourse Reached? ☐ Yes ☒ No		If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

The cause of the release was due to a power outage to the transfer pump. The power issue has been corrected.

Describe Area Affected and Cleanup Action Taken.*

45bbls of produced water was initially released and the entire release was contained inside the dike walls of the tank battery. A vacuum truck was called and recovered 40bbls of produced water. The contaminated dirt and gravel has been removed. Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a remediation work plan to the NMOCD/BLM for approval prior to any significant remediation.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Describe Cause of Problem and Remedial Action Taken.*

The cause of the release was due to an alarm system failure. The alarm transducer has been replaced.

Describe Area Affected and Cleanup Action Taken.*

181bbls of water was initially released from the water tank inside the tank batter. We were able to recover 180bbls of produced water. The fluid remained completely inside the firewalls of the tank battery and is located in the excavated area from the previous spill. (The estimated chloride content of this release is 110121.0 mg/l.) Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a remediation work plan to the NMOCD / BLM for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. Was a Watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

Dispatch problems by Navajo Trucking Company resulted in the oil trucks not being able to haul which ultimately led to oil stock tanks running over. Navajo has accepted fault for the release and financially responsible for the environmental cleanup.

Describe Area Affected and Cleanup Action Taken.*

Initially 80bbls of oil was release and completely contained inside the dike walls of the facility. We were able to recover 75bbls with a vacuum truck. The dimensions of the spill area were 30' x 30' located behind the oil tanks. The contaminated soil has been removed and properly disposed. (The closest well location to the release is the BC Federal #1, 330' FNL 1575' FWL, Sec.20-T17S-R32E. Lea Co., NM. NMLC-029405A. API#30-025-34733). Tetra Tech will sample the spill site area to delineate any possible contamination from the release and we will present a remediation work plan to the NMOCD / BLM for approval prior to any significant remediation work.

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

A 6" produced water line at the facility ruptured causing the release. The 6" line has been rebuilt and returned to service.

Describe Area Affected and Cleanup Action Taken.*

Initially, 70 bbls of produced water was released from a 6" produced water line and we were able to recover 65 bbls with a vacuum truck. This release occurred inside the BC Federal #1 tank battery. We have recovered all free standing fluid inside the facility and have scraped the pad area from the overspray. We will present a remediation work plan to the OCD/BLM for approval prior to any significant remediation work.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. NATURE OF RELEASE

Type of Release: Produced Water	Volume of Release 70 bbls oil	Volume Recovered 65 bbls
Source of Release: 6'' water line	Date and Hour of Occurrence 06/05/2012	Date and Hour of Discovery 06/05/2012 6:00 p.m.
Was Immediate Notice Given? ☒ Yes ☐ No ☐ Not Required	If YES, To Whom? Geoffrey Leking-OCD, Jim Amos-BLM, Terry Gregston-BLM	
By Whom? Michelle Mullins	Date and Hour 06/06/12 3:08 p.m.	
Was a Watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse.	

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

A 6'' produced water line at the facility ruptured causing the release. The 6'' line has been rebuilt and returned to service.

Describe Area Affected and Cleanup Action Taken.*

Tetra Tech personnel inspected the site and collected samples to define the spills extent. Soil that exceeded RRAL was removed and hauled away for proper disposal. The site was then brought up to surface grade with clean backfill material. Tetra Tech prepared a closure report and submitted it to NMOCD for review.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

TETRA TECH

March 19, 2013

Mr. Geoffrey Leking
Environmental Engineer Specialist
Oil Conservation Division, District 1
1625 North French Drive
Hobbs, New Mexico 88240

Re: Work Plan for the COG Operating LLC., BC Federal #1 Tank Battery, located in Unit C, Section 20, Township 17 South, Range 32 East, Lea County, New Mexico.

Mr. Leking:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the BC Federal #1 Tank Battery, located in Unit C, Section 20, Township 17 South, Range 32 East, Lea County, New Mexico (Site). The spill site coordinates are N 32.826202°, W 103.792133°. The site location is shown on Figures 1 and 2.

Background

The BC Federal #1 Tank Battery had five (5) separate spills recorded with individual initial C-141 forms. The spills will be separated for clarification and referred to as Spill #1 through Spill #5. The spill inside the firewall did overlap each other as shown on Figure 3. The initial C-141 forms are enclosed in Appendix A. According to the State of New Mexico C-141, the spills detailed are shown below.

Spill #1

On March 13, 2010, the spill occurred and released approximately forty five (45) barrels of produced water due to a power outage to the transfer pump. To alleviate the problem, COG personnel repaired the power outage. Forty (40) barrels of standing fluids were recovered. The spill was contained within the facility berms.

Spill #2

On March 26, 2010, the spill occurred and released approximately nine (9) barrels of produced water due to an alarm failure. To alleviate the problem, COG personnel repaired the alarm system. Six (6) barrels of standing fluids were

recovered. The spill was contained within the facilities berm and impacted the same footprint of the previous spill (Spill #1).

Spill #3

On April 20, 2010, the spill occurred and released approximately hundred eighty one (181) barrels of produced water due to an alarm failure. To alleviate the problem, COG personnel replaced the alarm transducer. One hundred eighty (180) barrels of standing fluids were recovered. The spill was contained within the facilities berm and impacted the same footprint of the previous spills (Spill #1 and Spill #2).

Spill #4

On August 20, 2010, the released occurred and released approximately eighty (80) barrels of oil due to tank over flow. Approximately seventy-five (75) barrels of standing fluids were recovered. The spill was contained within the facility berms and impacted the same footprint of the previous spills only on the southwest corner of the facility.

Spill #5

The leak was discovered on June 5, 2012, and released approximately seventy (70) barrels of produced water due to a rupture 6" water line. To alleviate the problem, COG personnel repaired the line. Sixty-five (65) barrels of standing fluids were recovered. The spill was contained within the facility berms and impacted the same footprint of the previous spills only on the southwest corner of the facility. The fluids breached the southwest firewall and migrated approximately 340' southwest of the tank battery.

Spill Chronology and Tetra Tech Sampling

3/13/10	*Spill #1 occurred*
3/26/10	*Spill #2 occurred*
4/8/10	Initial assessment (spill #1 and spill #2) - installed 4 auger holes
4/20/10	*Spill #3 occurred*
5/11/10	Installed 3 borings to delineate impact
6/10/10	Follow up assessment to collected surface samples
8/20/10	*Spill #4 occurred*
9/7/10	Tetra Tech installed a single auger hole
11/20/10	Tetra Tech installed one boring
6/5/12	*Spill #5 occurred*
8/1/12	Tetra Tech installed auger holes
9/12/12	Tetra Tech installed borings

Groundwater

The United States Geological Survey (USGS) Well Reports did not list any wells in Section 20. According to the NMOCD groundwater map, the average depth to groundwater in this area is greater than 175' below surface. The groundwater data is shown in Appendix B.

Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 5,000 mg/kg.

Soil Assessment and Analytical Results

Spill #1, #2, and #3 - Sampling
Inside Tank Battery Firewalls

On April 8, 2010, Tetra Tech personnel inspected and sampled the spill area for Spill #1 and Spill #2, which overlapped each other. A total of four (4) auger holes (AH-1 through AH-4) were installed using a stainless steel hand auger to assess the impacted soils.

Selected samples were analyzed for TPH by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B. The sampling results are summarized in Table 1. The auger hole locations are shown on Figure 3.

Referring to Table 1, all of the auger hole locations either showed TPH, benzene or total BTEX exceeding the RRAL and vertically defined in the shallow soils. Elevated chloride concentrations were detected at AH-1, AH-2 and AH-3 from surface to a depth of approximately 8-8.5' below surface. Deeper samples were not collected due to the dense caliche formation. The chloride impact was not vertically defined. The chloride impact at AH-4 was vertically defined and significantly declined at 3.0' below surface.

On May 11, 2010, Tetra Tech personnel supervised the installation of soil borings (SB-1, SB-2 and SB-3) utilizing an air rotary drilling rig to collect deeper samples. Prior to the installation of the soil borings, Spill #3 had occurred on top of the two older spills (Spill #1 and #2). The soil borings were installed to a total depth of 20.0' for SB-1 and 30.0' for SB-2, and SB-3. Referring to Table 1, chloride concentrations decreased with depth to less than 400 mg/kg at the bottom hole samples.

On June 10, 2010, Tetra Tech personnel collected additional samples (surface samples 0-5') from all four auger holes (AH-1, AH-2, AH-3 and AH-4) in order to correlate the drilling results with previous spill assessment. The sampling results are summarized in Table 1.

Spill #4 Sampling
Inside Tank Battery (Northwest Corner)

On September 7, 2010, Tetra Tech personnel inspected and sampled the spill area (Spill #4) located southwest corner of the facility, which measured approximately 30' x 30'. A single auger hole (AH-1) was installed using a stainless steel hand auger to assess the impacted soils. Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B. The sampling results are summarized in Table 1. The auger hole locations are shown on Figure 4.

Referring to Table 2, the submitted samples from AH-1 were below the RRAL for BTEX and TPH. Elevated chloride concentrations were detected down to 9-9.5' below surface of 4,710 mg/kg. In order to delineate the impact of the spill, deeper samples would need to be collected utilizing an air rotary.

On November 10, 2010, Tetra Tech personnel supervised the installation of a single soil boring (SB-1) near AH-1. Soil samples were collected to a depth of 40' below surface. Referring to Table 1, elevated chloride concentrations decreased to less than 200 mg/kg at 25' below surface.

Spill #5 Sampling
(Tank Battery -Northwest Corner and Outside Tank Battery

On August 1 2012, Tetra Tech personnel inspected and sampled the spill area (Spill #5). A total of eight (8) auger holes were installed to assess the spill area. The spill was contained within the facility berms and impacted the same footprint of the previous spills only on the southwest corner of the facility. The fluids breached the southwest firewall and migrated approximately 340' southwest of the tank battery. One auger hoe was installed inside the southwest firewall and seven (7) outside the facility firewalls.

Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B. The sampling results are summarized in Table 2. The auger hole locations are shown on Figure 4.
The

Referring to Table1, the auger hole (AH-1) located on the southwest corner, inside the tank battery showed total BTEX concentrations exceeding the RRAL at 0-1' of 54.1 mg/kg and 1-1.5' of 165.3 mg/kg and decline below the RRAL at 2-2.5' below surface. The chloride impact was not vertically defined, with a chloride of 4,330 mg/kg at 10-10.5 below surface.

Referring to Table 2, majority of the auger holes, installed outside the tank battery firewalls, were below the RRAL for TPH and BTEX, except for the area of AH-2. Auger hole (AH-2) showed a TPH of 6,956 mg/kg exceeding the RRAL, but declined to 297 mg/kg at 1-1.5' below the RRAL. In the areas of auger holes (AH-2 and AH-3), the chloride impacted soils were not defined. However, the remaining areas (AH-4, AH-5, AH-6, AH-7 and AH-8) were vertically defined and showed a declining chloride with depth.

On September 12, 2012, Tetra Tech personnel supervised the installation of a three (3) soil borings (SB-1, SB-2 and SB-3) in the areas of AH-1, AH-2 and AH-3. Auger holes (AH-1 and AH-2) showed a deeper chloride impact to the soils, which significantly declined at 50.0' below surface. In the area of AH-1 (SB-1), the bottom hole sample showed a slight chloride spike of 1,240 mg/kg at 59-60', with appears to be cross-contaminated with the upper sandy soils. The area of AH-3 (SB-3) showed a shallow impact and significant declined at approximately 15.0' below surface.

Work Plan

COG proposes to supervise the removal of impacted material as are highlighted in Table 1 and Table 2. In addition, the proposed excavation areas and depths are shown on Figure 4. For safety concerns and tank stability issues, the impacted soil inside the tank battery firewalls will be excavated to a depth of 3.0' to 4.0' below surface, except for the area of AH-4. Auger hole (AH-4) will be excavated to a depth of approximately 2.0' below surface. Once the areas are excavated to the appropriate depths, the excavation bottom of AH-1, AH-2 and AH-3 will be capped with clay material (6" thick) and backfilled to grade with clean soils.

In addition, the impacted areas outside the tank battery will be excavated from depth of approximately 1.0' to 7.0' below surface to remove the elevated chlorides. The area of AH-2 will be excavated to a depth of 4.0' to 5.0' below surface, where deeper excavation will not performed due to the vicinity of the spill (near tank battery and flow lines). The area of AH-3 will be excavated to a depth of 7.0' to remove majority of the chloride impact in the area.

TETRA TECH

Due to the location of the spill, the proposed excavation areas or depths may not be achieved due to wall cave ins, limited access, oil and gas equipment, electrical, structures or lines which may not be feasible or practicable to be removed due to safely concerns. As such, Tetra Tech will excavate the soils to the maximum extent practicable. If the impacted soils are not accessible, the soils will be deferred until the abandonment of the facility.

Upon completion, a final report will be submitted to the NMOCD. If you have any questions or comments concerning the assessment or the proposed remediation activities for this site, please call me at (432) 682-4559.

Respectfully submitted,
TETRA TECH

Ike Tavarez, PG
Senior Project Manager

May 17, 2013

Mr. Geoffrey Leking
Environmental Engineer Specialist
Oil Conservation Division, District 1
1625 North French Drive
Hobbs, New Mexico 88240

Re: Closure Report for the COG Operating LLC., BC Federal #1 Tank Battery, located in Unit C, Section 20, Township 17 South, Range 32 East, Lea County, New Mexico.

Mr. Leking:

Tetra Tech, Inc. (Tetra Tech) was contacted by COG Operating LLC. (COG) to assess a spill from the BC Federal #1 Tank Battery, located in Unit C, Section 20, Township 17 South, Range 32 East, Lea County, New Mexico (Site). The spill site coordinates are N 32.826202°, W 103.792133°. The site location is shown on Figures 1 and 2.

Background

The BC Federal #1 Tank Battery had five (5) separate spills recorded with individual initial C-141 forms. The spills will be separated for clarification and referred to as Spill #1 through Spill #5. The spill inside the firewall did overlap each other as shown on Figure 3. The initial C-141 forms are enclosed in Appendix A. According to the State of New Mexico C-141, the spills detailed are shown below.

Spill #1

On March 13, 2010, the spill occurred and released approximately forty five (45) barrels of produced water due to a power outage to the transfer pump. To alleviate the problem, COG personnel repaired the power outage. Forty (40) barrels of standing fluids were recovered. The spill was contained within the facility berms.

Spill #2

On March 26, 2010, the spill occurred and released approximately nine (9) barrels of produced water due to an alarm failure. To alleviate the problem, COG personnel repaired the alarm system. Six (6) barrels of standing fluids were

Tetra Tech
1910 North Big Spring, Midland, TX 79705
Tel 432.682.4559 Fax 432.682.3946 www.tetratech.com

recovered. The spill was contained within the facilities berm and impacted the same footprint of the previous spill (Spill #1).

Spill #3

On April 20, 2010, the spill occurred and released approximately hundred eighty one (181) barrels of produced water due to an alarm failure. To alleviate the problem, COG personnel replaced the alarm transducer. One hundred eighty (180) barrels of standing fluids were recovered. The spill was contained within the facilities berm and impacted the same footprint of the previous spills (Spill #1 and Spill #2).

Spill #4

On August 20, 2010, the released occurred and released approximately eighty (80) barrels of oil due to tank over flow. Approximately seventy-five (75) barrels of standing fluids were recovered. The spill was contained within the facility berms and impacted the same footprint of the previous spills only on the southwest corner of the facility.

Spill #5

The leak was discovered on June 5, 2012, and released approximately seventy (70) barrels of produced water due to a rupture 6" water line. To alleviate the problem, COG personnel repaired the line. Sixty-five (65) barrels of standing fluids were recovered. The spill was contained within the facility berms and impacted the same footprint of the previous spills only on the southwest corner of the facility. The fluids breached the southwest firewall and migrated approximately 340' southwest of the tank battery.

Spill Chronology and Tetra Tech Sampling

3/13/10	*Spill #1 occurred*
3/26/10	*Spill #2 occurred*
4/8/10	Initial assessment (spill #1 and spill #2) - installed 4 auger holes
4/20/10	*Spill #3 occurred*
5/11/10	Installed 3 borings to delineate impact
6/10/10	Follow up assessment to collected surface samples
8/20/10	*Spill #4 occurred*
9/7/10	Tetra Tech installed a single auger hole
11/20/10	Tetra Tech installed one boring
6/5/12	*Spill #5 occurred*
8/1/12	Tetra Tech installed auger holes
9/12/12	Tetra Tech installed borings

Groundwater

The United States Geological Survey (USGS) Well Reports did not list any wells in Section 20. According to the NMOCD groundwater map, the average depth to groundwater in this area is greater than 175' below surface. The groundwater data is shown in Appendix B.

Regulatory

A risk-based evaluation was performed for the Site in accordance with the New Mexico Oil Conservation Division (NMOCD) Guidelines for Remediation of Leaks, Spills and Releases, dated August 13, 1993. The guidelines require a risk-based evaluation of the site to determine recommended remedial action levels (RRAL) for benzene, toluene, ethylbenzene and xylene (collectively referred to as BTEX) and total petroleum hydrocarbons (TPH) in soil. The proposed RRAL for benzene was determined to be 10 parts per million (ppm) or milligrams per kilogram (mg/kg) and 50 ppm for total BTEX (sum of benzene, toluene, ethylbenzene, and xylene). Based upon the depth to groundwater, the proposed RRAL for TPH is 5,000 mg/kg.

Soil Assessment and Analytical Results

Spill #1, #2, and #3 - Sampling
Inside Tank Battery

On April 8, 2010, Tetra Tech personnel inspected and sampled the spill area for Spill #1 and Spill #2, which overlapped each other. A total of four (4) auger holes (AH-1 through AH-4) were installed using a stainless steel hand auger to assess the impacted soils.

Selected samples were analyzed for TPH by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B. The sampling results are summarized in Table 1. The auger hole locations are shown on Figure 3.

Referring to Table 1, all of the auger hole locations either showed TPH, benzene or total BTEX exceeding the RRAL and vertically defined in the shallow soils. Elevated chloride concentrations were detected at AH-1, AH-2 and AH-3 from surface to a depth of approximately 8-8.5' below surface. Deeper samples were not collected due to the dense caliche formation. The chloride impact was not vertically defined. The chloride impact at AH-4 was vertically defined and significantly declined at 3.0' below surface.

On May 11, 2010, Tetra Tech personnel supervised the installation of soil borings (SB-1, SB-2 and SB-3) utilizing an air rotary drilling rig to collect deeper samples. Prior to the installation of the soil borings, Spill #3 had occurred on top of the two older spills (Spill #1 and #2). The soil borings were installed to a total depth of 20.0' for SB-1 and 30.0' for SB-2, and SB-3. Referring to Table 1, chloride concentrations decreased with depth to less than 400 mg/kg at the bottom hole samples.

On June 10, 2010, Tetra Tech personnel collected additional samples (surface samples 0-5') from all four auger locations in order to correlate the drilling results with previous spill assessment. The sampling results are summarized in Table 1.

Spill #4 Sampling
Inside Tank Battery (Northwest Corner)

On September 7, 2010, Tetra Tech personnel inspected and sampled the spill area (Spill #4) located southwest corner of the facility, which measured approximately 30' x 30'. A single auger hole (AH-1) was installed using a stainless steel hand auger to assess the impacted soils. Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B. The sampling results are summarized in Table 1. The auger hole locations are shown on Figure 4.

Referring to Table 2, the submitted samples from AH-1 were below the RRAL for BTEX and TPH. Elevated chloride concentrations were detected down to 9-9.5' below surface of 4,710 mg/kg. In order to delineate the impact of the spill, deeper samples would need to be collected utilizing an air rotary.

On November 10, 2010, Tetra Tech personnel supervised the installation of a single soil boring (SB-1) near AH-1. Soil samples were collected to a depth of 40' below surface. Referring to Table 1, elevated chloride concentrations decreased to less than 200 mg/kg at 25' below surface.

Spill #5 Sampling
(Tank Battery -Northwest Corner and Outside Tank Battery

On August 1 2012, Tetra Tech personnel inspected and sampled the spill area (Spill #5). A total of eight (8) auger holes were installed to assess the spill area. The spill was contained within the facility berms and impacted the same footprint of the previous spills only on the southwest corner of the facility. The fluids breached the southwest firewall and migrated approximately 340' southwest of the tank battery. One auger hoe was installed inside the southwest firewall and seven (7) outside the facility firewalls.

Selected samples were analyzed for TPH analysis by EPA method 8015 modified, BTEX by EPA Method 8021B and chloride by EPA method 300.0. Copies of laboratory analysis and chain-of-custody documentation are included in Appendix B. The sampling results are summarized in Table 2. The auger hole locations are shown on Figure 4.
The

Referring to Table1, the auger hole (AH-1) located on the southwest corner, inside the tank battery showed total BTEX concentrations exceeding the RRAL at 0-1' of 54.1 mg/kg and 1-1.5' of 165.3 mg/kg and decline below the RRAL at 2-2.5' below surface. The chloride impact was not vertically defined, with a chloride of 4,330 mg/kg at 10-10.5 below surface.

Referring to Table 2, majority of the auger holes, installed outside the tank battery firewalls, were below the RRAL for TPH and BTEX, except for the area of AH-2. Auger hole (AH-2) showed a TPH of 6,956 mg/kg exceeding the RRAL, but declined to 297 mg/kg at 1-1.5' below the RRAL. In the areas of auger holes (AH-2 and AH-3), the chloride impacted soils were not defined. However, the remaining areas (AH-4, AH-5, AH-6, AH-7 and AH-8) were vertically defined and showed a declining chloride with depth.

On September 12, 2012, Tetra Tech personnel supervised the installation of a three (3) boreholes in the areas of AH-1, AH-2 and AH-3. Auger holes (AH-1 and AH-2) showed a deeper impact to the soils, which significantly declined at 50.0' below surface. In the area of AH-1, the bottom auger hole samples showed a slight chloride spike to 1,240 mg/kg at 59'-60', with appears to be cross-contaminated with the upper soils. The area of AH-3 showed shallow impact and significant declined at approximately 15.0'.

Remediation and Conclusion

From April 18-29, 2013, Tetra Tech personnel supervised the remediation at the site. All of the excavation depths inside and outside the tank battery were achieved as stated in the approved work plan. The excavated areas and depths are highlighted in Table 1 and shown on Figure 4.

Due to safety concerns and tank stability issues, the impacted soil inside the tank battery firewalls were excavated to a depth of 3.0' to 4.0' below surface, except for the area of AH-4 (spill 1). Auger hole (AH-4, spill #1) was excavated to a depth of approximately 2.0' to 3.0' below surface. Once excavated to the appropriate depths, the areas of AH-1, AH-2 and AH-3 were capped with clay material (6" thick) and backfilled to grade with clean soils.

The impacted areas outside the tank battery were excavated from depths ranging from 1.0' to 7.0' below surface to remove the elevated chlorides. The area of AH-2 (spill #5) was excavated to a depth of 4.0' below surface and lined with 40 mil plastic liner.

TETRA TECH

Once approved for backfilling, all of the excavations were then brought to grade with additional clean soil. Approximately 820 cubic yards of soil were excavated and transported to the R360 facility for proper disposal.

Based on the remedial activities performed, COG request closure of the site. Copies of the C-141s (Final) are included in Appendix A. If you have any questions or comments concerning the remedial activities, please call at (432) 682-4559.

Respectfully submitted,
TETRA TECH

Ike Tavarez, PG

Summary Report

Ike Tavarez
Tetra Tech
1910 N. Big Spring Street
Midland, TX 79705

Report Date: September 24, 2012

Work Order: 12091436

Project Location: Lea Co., NM
Project Name: COG/BC Fed. #1 Tank Battery
Project Number: 114-6400671
