Describe Cause of Problem and Remedial Action Taken.*

Fill valve left open on a full crude oil tank, caused crude oil tank to overflow.

Describe Area Affected and Cleanup Action Taken.* An approximate area of 100' X 30' was impacted within the steel containment of the battery. All released crude oil was recovered by vacuum truck(s). Due to the steel containment collecting all released crude oil and allowing for all the released crude oil to be recovered, a C-141 Initial/Final is submitted to the OCD requesting closure. Depth to Ground Water: >100' (approximately 105', Section 8, T19S-R25E, per Trend Map), Wellhead Protection Area: No, Distance to Surface Water Body: >1000', SITE RANKING IS 0. Yates Petroleum Corporation requests closure.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
