13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 19.15.7.14 NMAC. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

Oxy USA WTP Limited Partnership respectfully requests permission to surface commingle the three subject wells, Anderson 35 #2H, Anderson 35 #3H and Anderson 35 #5H.

The Anderson 35 Central Tank Battery is located on fee property. Production from each well is allocated by well test using a three phase test separator with outlet meters for gas (T1437903), oil (59827) and water (50834). The oil production is commingled, measured and sold on lease using a LACT Unit at the Central Tank Battery. Produced water flows to either the Red Tank 28-3 or NBR Salt Water Disposal wells. Gas is routed off lease and sold through DCP meter #13135397, located at latitude 32.389530° and longitude -103.608070° after it is measured by Oxy check meter T143795803 prior to leaving the lease. The oil and gas meters will be calibrated on a regular basis per API and NMOC specifications. The OCD will be notified of any future modifications to the facility.

The flow of production is shown in detail on the enclosed facility diagram.

The commingling of production is in the interest of conservation and will result in the most effective economic means of producing the reserves in place from the affected wells and will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce operating expenses as well as reduce the surface facility footprint and overall emissions.

Oxy WTP understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. I hereby certify that the information above is true and complete to the best of my knowledge and belief.
