Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			
If a Watercourse was Impacted, Describe Fully.*					

Describe Cause of Problem and Remedial Action Taken:

In July 2009, Fasken discovered a historical release along the Denton Salt Water Disposal (SWD) flowline. The release was attributed to failure of a section of an old steel flowline, which had been replaced with a fiberglass line several years prior to the discovery of the release. Failure of the steel flowline resulted in the release of an unknown volume of produced water. Following vertical delineation, the historical release was reported to the NMOCD Hobbs District Office on July 31, 2009, in a remediation plan entitled *Proposed Cleanup of Historical Salt Water Spill Sites*.

Describe Area Affected and Cleanup Action Taken.

The release affected an area of pastureland measuring approximately 91,205 square feet, as well as an oil lease access road. The release was remediated as per NMOCD approval. Please reference the attached *Remediation Summary & Risk-Based Site Closure Request* for remediation details.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases, which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

1.0 INTRODUCTION & BACKGROUND INFORMATION

Basin Environmental Service Technologies, LLC (Basin), on behalf of Fasken Oil & Ranch, Ltd. (Fasken), has prepared this *Remediation Summary & Risk-Based Site Closure Request* for the release site known as Denton SWD Historical Site #7. The legal description of the release site is Unit Letter "C" (NE/NW), Section 11, Township 15 South, Range 37 East, in Lea County, New Mexico. The geographic coordinates of the release site are 33.0373° North latitude and 103.1717° West longitude. The property affected by the release is owned by Mr. Darr Angell. A "Site Location Map" is provided as Figure 1.

In July 2009, Fasken discovered a historical release along the Denton Salt Water Disposal (SWD) flowline. The release was attributed to failure of a section of an old steel flowline, which had been replaced with a fiberglass line several years prior to the discovery of the release. Failure of the steel flowline resulted in the release of an unknown volume of produced water. The historical release was reported to the New Mexico Oil Conservation Division (NMOCD) Hobbs District Office on July 31, 2009. General photographs of the release site are provided as Appendix A.

In July 2009, a previous consultant advanced three (3) soil borings at the release site to delineate the vertical extent of impacted soil.

On July 31, 2009, Fasken submitted a risk-based site closure proposal, *Proposed Cleanup of Historical Salt Water Spill Sites*, to the NMOCD Hobbs District Office, presenting laboratory analytical results from the drilling event and summarizing remedial activities to-date. Based on laboratory analytical results, Fasken requested and received NMOCD approval to remove heavily chloride-impacted soil from above the hard rock layer at the site [approximately three feet (3') below ground surface (bgs)], install an impermeable liner in the floor of the excavation, and backfill the excavation with non-impacted material.

2.0 NMOCD SITE CLASSIFICATION

A search of the New Mexico Water Rights Reporting System (NMWRRS) database maintained by the New Mexico Office of the State Engineer (NMOSE) indicated the depth to water in Section 11, Township 15 South, Range 37 East ranges from approximately thirty-seven feet (37') to sixty-five feet (65') bgs. A depth-to-groundwater reference map utilized by the NMOCD indicates groundwater should be encountered at approximately fifty-five feet (55') bgs at the release site. Based on the NMOCD ranking system, ten (10) points will be assigned to the site as a result of this criterion.

A search of the NMWRRS database indicated there are water supply wells within 1,000 feet of the release. Based on the NMOCD ranking system, twenty (20) points will be assigned to the site as a result of this criterion.

There are no surface water bodies within 1,000 feet of the release. Based on the NMOCD ranking system, zero (0) points will be assigned to the site as a result of this criterion.

NMOCD guidelines indicate the Denton SWD Historical Site #7 release site has an initial ranking score of thirty (30) points. The soil remediation levels for a site with a ranking score of thirty (30) points are as follows:

- Benzene – 10 mg/Kg (ppm)
- BTEX – 50 mg/Kg (ppm)
- TPH – 100 mg/Kg (ppm)

The New Mexico Administrative Code (NMAC) does not currently specify a remediation level for chloride concentrations in soil. Chloride remediation levels are set by the NMOCD on a site-specific basis.

3.0 SUMMARY OF SOIL REMEDIATION ACTIVITIES

On February 1, 2012, excavation of impacted soil commenced at the site. Hach Quantab Chloride Low Range (30-600 mg/Kg) Titrators were used to field-screen the horizontal extent of impacted soil and to guide the excavation. Due to the presence of an oil lease access road and a barbed wire fence which bisect the release site north to south and east to west, respectively, the excavation was divided into four sections to facilitate remediation: Sections A, B, C, and D. Excavated soil was stockpiled on-site, pending final disposition.

From February 1 through February 28, 2012, approximately ten thousand, one hundred cubic yards (10,100 yd³) of impacted soil was excavated and transported to Gandy Marley, Inc. (NMOCD Permit # DP-1041), for disposal. A representative sample of soil disposal manifests is included as Appendix C.

On February 7, 2012, seven (7) soil samples (North Wall #1, North Wall #2, North Wall #3, North Wall #4, North Wall #5, North Wall #6, and North Wall #7) were collected from the sidewalls of Section A. The soil samples were submitted to Cardinal Laboratories in Hobbs, New Mexico, for analysis of chloride concentrations using EPA Method 4500 Cl-B. Table 1 summarizes the “Concentrations of Chloride in Soil”. Soil sample locations are depicted in Figure 2, “Site & Sample Location Map”. Laboratory analytical reports are provided as Appendix B.

Laboratory analytical results indicated chloride concentrations ranged from 48 mg/Kg in soil sample North Wall #4 to 3,760 mg/Kg in soil sample North Wall #5. Review of laboratory analytical results indicated the chloride concentrations in soil samples North Wall #1 and North Wall #5 exceeded the regulatory remediation action level (RRAL) established for the site by the NMOCD.

Based on laboratory analytical results, further delineation and/or remediation was required in the areas defined by soil samples North Wall #1 and North Wall #5.

On February 8, 2012, one (1) soil sample (North Wall #8) was collected from the sidewall of Section A, and one (1) soil sample (South Wall #4) was collected from the sidewall of Section B. The soil samples were submitted to the laboratory for analysis of chloride concentrations. Laboratory analytical results indicated chloride concentrations ranged from 736 mg/Kg in soil

sample North Wall #8 to 1,540 mg/Kg in soil sample South Wall #4. Review of laboratory analytical results indicated the chloride concentration in soil sample South Wall #4 exceeded the RRAL established for the site.

Based on laboratory analytical results, further delineation and/or remediation would be required in the area defined by soil sample South Wall #4.

On February 8, 2012, Basin representatives met with a representative of the NMOCD Hobbs District Office to request permission to leave the oil lease access road and the soil underneath the barbed wire fence bisecting the release site in place. The request was approved by the NMOCD representative.

On February 9, 2012, four (4) soil samples (South Wall #3, South Wall #5, South Wall #6, and South Wall #7) were collected from the sidewalls of Section B and submitted to the laboratory for analysis of chloride concentrations. Laboratory analytical results indicated chloride concentrations ranged from less than the laboratory method detection limit (MDL) of 16.0 mg/Kg in soil sample South Wall #3 to 80.0 mg/Kg in soil sample South Wall #7. Review of laboratory analytical results indicated the chloride concentrations in all submitted soil samples were less than the RRAL established for the site.

On February 10, 2012, one (1) soil sample (East Wall #1) was collected from the sidewall of Section C, and two (2) soil samples (East Wall #4 and East Wall #5) were collected from the sidewalls of Section D. The soil samples were submitted to the laboratory for analysis of chloride concentrations. Laboratory analytical results indicated chloride concentrations ranged from less than the laboratory MDL of 16.0 mg/Kg in soil samples East Wall #1 and East Wall #5 to 960 mg/Kg in soil sample East Wall #4. Review of laboratory analytical results indicated the chloride concentrations in all submitted soil samples were less than the RRAL established for the site.

On February 15, 2012, four (4) soil samples (West Wall #1, West Wall #2, West Wall #3, and West Wall #4) were collected from the sidewalls of Section A, and one (1) soil sample (North Wall #9) was collected from the sidewall of Section C. The soil samples were submitted to the laboratory of analysis of chloride concentrations. Laboratory analytical results indicated chloride concentrations ranged from 16.0 mg/Kg in soil sample North Wall #9 to 5,800 mg/Kg in soil sample West Wall #2. Review of laboratory analytical results indicated the chloride concentrations in soil samples West Wall #1, West Wall #2, West Wall #3, and West Wall #4 exceeded the RRAL established for the site.

Further excavation in the areas represented by soil samples West Wall #1, West Wall #2, West Wall #3, and West Wall #4 was precluded by the presence of active pipelines immediately adjacent to the sample locations.

On February 16, 2012, two (2) soil samples (North Wall #1B and North Wall #5B) were collected from the sidewalls of Section A, one (1) soil sample (South Wall #4B) was collected from the sidewall of Section B, two (2) soil samples (East Wall #2 and East Wall #3) were collected from the sidewalls of Section C, and two (2) soil samples (South Wall #8 and East Wall #6) were collected from the sidewalls of Section D. Laboratory analytical results indicated chloride concentrations ranged from less than the laboratory MDL of 16.0 mg/Kg in soil sample North Wall #5B to 800 mg/Kg in soil sample East Wall #6. Review of laboratory analytical

results indicated chloride concentrations in all submitted soil samples were less than the RRAL established for the site.

On February 21, 2012, a Basin representative contacted a representative of the NMOCD Hobbs District Office to request permission to backfill the excavation and to leave soil represented by soil samples West Wall #1, West Wall #2, West Wall #3, and West Wall #4 in place. The requests were approved by the NMOCD representative on March 1, 2012, with the caveat that soil exhibiting contamination above the RRAL established for the site will be remediated upon decommission or abandonment of the currently active pipelines and/or the oil lease access road.

Based on laboratory analytical results, and with NMOCD approval, from March 26 through April 5, 2012, the excavations were backfilled with approximately six thousand, one hundred and seventy-five cubic yards (6,175 yd³) of topsoil purchased from the landowner, compacted, and contoured to fit the surrounding topography. Prior to backfilling, an impermeable clay liner was placed in the floor of the excavation, compacted, and leveled. Final dimensions of Section A were approximately three hundred and thirty-two feet (332') in length, ranging in width from approximately eighty-two feet (82') to approximately two hundred and six feet (206'), and approximately three feet (3') in depth. Final dimensions of Section B were approximately two hundred and forty-five feet (245') in length, ranging in width from approximately eighty-eight feet (88') to approximately one hundred and twenty-eight feet (128'), and approximately three feet (3') in depth. Final dimensions of Section C were approximately one hundred and twenty feet (120') in length, ranging in width from approximately sixteen feet (16') to approximately one hundred and seven feet (107'), and approximately three feet (3') in depth. Final dimensions of Section D were approximately one hundred and thirty-four feet (134') in length, ranging in width from approximately twenty-one feet (21') to approximately forty-six feet (46'), and approximately three feet (3') in depth.

The Denton SWD Historical Site #7 release site will be seeded with an NMOCD-approved seed mixture during the 2012 calendar year.

4.0 QA/QC PROCEDURES

4.1 Soil Sampling

Soil Samples were delivered to Cardinal Laboratories in Hobbs, New Mexico, for analysis of chloride concentrations in accordance with EPA Method 4500 Cl-B. Soil samples were analyzed for chloride concentrations within fourteen (14) days following the collection date.

4.2 Decontamination of Equipment

Cleaning of the sampling equipment was the responsibility of the environmental technician. Prior to use, and between each sample, the sampling equipment was cleaned with Liqui-Nox® detergent and rinsed with distilled water.

4.3 Laboratory Protocol

The laboratory was responsible for proper QA/QC procedures after signing the chain-of-custody form(s). These procedures were either transmitted with the laboratory analytical reports or are on file at the laboratory.

5.0 SITE CLOSURE REQUEST

Soil samples collected from the sidewalls of the Denton SWD Historical Site #7 excavation were analyzed by an NMOCD-approved laboratory, and chloride concentrations were below the regulatory remediation action levels established for the site. The activities conducted at the site met the objectives set forth in the *Proposed Cleanup of Historic Salt Water Spill Sites*, dated July 31, 2009. Basin recommends Fasken provide the NMOCD Hobbs District Office a copy of this *Remediation Summary & Risk-Based Site Closure Request* and request the NMOCD grant site closure to the Denton SWD Historical Site #7 release site.

6.0 LIMITATIONS

Basin Environmental Service Technologies, LLC, has prepared this *Remediation Summary & Risk-Based Site Closure Request* to the best of its ability. No other warranty, expressed or implied, is made or intended. Basin has examined and relied upon documents referenced in the report and on oral statements made by certain individuals. Basin has not conducted an independent examination of the facts contained in referenced materials and statements. Basin has presumed the genuineness of these documents and statements and that the information provided therein is true and accurate. Basin has prepared this report in a professional manner, using the degree of skill and care exercised by similar environmental consultants. Basin notes that the facts and conditions referenced in this report may change over time, and the conclusions and recommendations set forth herein are applicable only to the facts and conditions as described at the time of this report.

This report has been prepared for the benefit of Fasken Oil & Ranch, Ltd. The information contained in this report, including all exhibits and attachments, may not be used by any other party without the express consent of Basin Environmental Service Technologies, LLC, and/or Fasken Oil & Ranch, Ltd.

Re: Denton SWD Historical Site #7

Enclosed are the results of analyses for samples received by the laboratory on 02/08/12 7:00.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.2	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Thank you

Celey D. Keene
Laboratory Director/Quality Manager

RE: DENTON SWD HISTORICAL SITE #7

Enclosed are the results of analyses for samples received by the laboratory on 02/10/12 8:25.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Celey D. Keene,

Lab Director/Quality Manager

RE: DENTON SWD HISTORICAL SITE #7

Enclosed are the results of analyses for samples received by the laboratory on 02/16/12 9:00.

Cardinal Laboratories is accredited through Texas NELAP under certificate number T104704398-11-3. Accreditation applies to drinking water, non-potable water and solid and chemical materials. All accredited analytes are denoted by an asterisk (*). For a complete list of accredited analytes and matrices visit the TCEQ website at www.tceq.texas.gov/field/qa/lab_accred_certif.html.

Cardinal Laboratories is accredited through the State of Colorado Department of Public Health and Environment for:

Method EPA 552.2	Haloacetic Acids (HAA-5)
Method EPA 524.2	Total Trihalomethanes (TTHM)
Method EPA 524.4	Regulated VOCs (V1, V2, V3)

Accreditation applies to public drinking water matrices.

This report meets NELAP requirements and is made up of a cover page, analytical results, and a copy of the original chain-of-custody. If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Hope Moreno

Inorganic Technical Director
