APPLICATION FOR AUTHORIZATION TO INJECT

- I. PURPOSE: XXX Secondary Recovery _____ Pressure Maintenance _____ Disposal _____ Storage _____
Application qualifies for administrative approval? _____ Yes _____ No
- II. OPERATOR: APACHE CORPORATION
ADDRESS: 303 VETERANS AIRPARK LANE, SUITE 3000, MIDLAND, TX 79705
CONTACT PARTY: BRIAN WOOD (PERMITS WEST, INC.) PHONE: 505 466-8120
- III. WELL DATA: Complete the data required on the reverse side of this form for each well proposed for injection.
Additional sheets may be attached if necessary.
- IV. Is this an expansion of an existing project? _____ Yes XXX No
If yes, give the Division order number authorizing the project: R-12981 et al
- V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.
- VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.
- VII. Attach data on the proposed operation, including: WEST BLINEBRY DRINKARD UNIT 38, 39, & 42
1. Proposed average and maximum daily rate and volume of fluids to be injected;
 2. Whether the system is open or closed;
 3. Proposed average and maximum injection pressure;
 4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,
 5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).
- *VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.
- IX. Describe the proposed stimulation program, if any.
- *X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted).
- *XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.
- XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.
- XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.
- XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.

NAME: BRIAN WOOD

TITLE: CONSULTANT

SIGNATURE: _____

DATE: JULY 5, 2016

E-MAIL ADDRESS: brian@permitswest.com

- * If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be resubmitted. Please show the date and circumstances of the earlier submittal: _____

III. WELL DATA

A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:

- (1) Lease name; Well No.; Location by Section, Township and Range; and footage location within the section.
- (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
- (3) A description of the tubing to be used including its size, lining material, and setting depth.
- (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District Offices have supplies of Well Data Sheets which may be used or which may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.

- (1) The name of the injection formation and, if applicable, the field or pool name.
- (2) The injection interval and whether it is perforated or open-hole.
- (3) State if the well was drilled for injection or, if not, the original purpose of the well.
- (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
- (5) Give the depth to and the name of the next higher and next lower oil or gas zone in the area of the well, if any.

XIV. PROOF OF NOTICE

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) The intended purpose of the injection well; with the exact location of single wells or the Section, Township, and Range location of multiple wells;
- (3) The formation name and depth with expected maximum injection rates and pressures; and,
- (4) A notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, 1220 South St. Francis Dr., Santa Fe, New Mexico 87505, within 15 days.

NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.

NOTICE: Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

I. Goals are to change the Drinkard injection interval of 3 existing water injection wells and increase the maximum bwpd injected per well from 490 to 3000. All are part of the Eunice; Blinebry-Tubb-Drinkard, North Pool (aka, Eunice; BLI-TU-DR, North and pool code = 22900). Wells and zone (Drinkard) are part of the West Blinebry Drinkard Unit (Cases 14125 and 14126, both Order Number R-12981), formed in 2008 by Apache. There have been 11 subsequent WFX approvals. Injection in these three wells was authorized in the original order. Blinebry perms authorized in original order will be squeezed.

- A. (3) Tubing will be internally plastic coated 2-3/8", J-55, 4.7#. Setting depths will be ≈6450'. (Highest proposed injection perforations will range from 6470' to 6510'.)

APACHE CORPORATION
 WEST BLINEBRY DRINKARD UNIT 38, 39, & 42
 SEC. 9, T. 21 S., R. 37 E.
 LEA COUNTY, NM

- A. (4) A 2-3/8" nickel-plated Arrow-set packer will be set at ≈6450' (or ≤100' above the highest perforation).
- B. (1) Injection zones will be the Drinkard carbonates. That zone is part of the Eunice; Blinebry-Tubb-Drinkard, North Pool. Estimated fracture gradient is ≈0.56 psi per foot.
- B. (2) Wells are, and will be, cased holes. Perforated zone will be Drinkard and intervals will be: #38 = 6480' - 6729', #39 = 6510' - 6762', and #42 = 6470' - 6722'.
- B. (3) Wells were originally drilled and completed as oil wells in 1948 (#38), 1949 (#39), and 1963 (#42). They were converted to water injection wells in 2008 under R-12981.
- B. (4) See table below for perforation and isolation histories.

well	current perfs	status	zone	proposed perfs (all Drinkard)
38	5620' - 6042'	active	Blinebry	6480' - 6729'
	6423' - 6736'	active	Drinkard

 SEC. 9, T. 21 S., R. 37 E.
 LEA COUNTY, NM

B. (5) Next higher oil or gas zone in the area of review is the Tubb. Above the Tubb is the Blinebry. Both are part of the same pool (Eunice; Blinebry-Tubb-Drinkard, North Pool) as the Drinkard. Next pool above that pool is the Hare; San Andres, East (96601). San Andres top is at ≈4007'. Next lower oil or gas zone in the area of review is the Wantz; Abo (62700). Abo top ranges from 6727' (#42) to 6767' (#39). (Abo will not be perforated. However, it will be penetrated to allow for better logging.)

IV. This is not a horizontal or vertical expansion of an existing injection project. The case file for the unit approval (R-12981) describes the water flood. There have been 10 water flood expansion approvals since then.

V. Exhibit C shows all 114 existing wells (95 oil or gas wells + 17 water injection wells + 1 P&A well + 1 water supply well) + 5 proposed wells in the areas of review, regardless of depth. Exhibit D shows all 917 existing wells (684 oil or gas wells + 117 injection or disposal wells + 86 P & A wells + 29 water wells + 1 brine well) within 2-mile radii.

Exhibit E shows all leases (only BLM, State, and fee) within a half-mile radius. Exhibit F shows all lessors (only BLM, State, and fee) within a two-mile radius. Apache is the Drinkard operator of all dedications within ½ mile of each well. Details on the leases within a half-mile are:

- VII. 1. Average injection rate will be \approx 2500 bwpd per well.
 Maximum injection rate will be \approx 3000 bwpd per well.
2. System will be closed. The wells are tied into the existing unit pipeline system. The system consists of a branched injection system with centrifugal injection pumps.
3. Average injection pressure will be \approx 1100 psi. Maximum injection pressure will be 1120 psi (see item (13) of Order R-12981).
4. Water source will be water pumped from two existing \approx 4000' deep San Andres water supply wells, plus produced water from Blinebry, Tubb, and Drinkard zones. The source water and produced water are collected in separate skim tanks. The two water streams (source and produced) are commingled in a tank before being piped to the injection wells. A comparison of nearby analyses and San Andres follows. No compatibility problems have reported from the 39,054,030 barrels that have been injected to date in the unit since 2009.

 SEC. 9, T. 21 S., R. 37 E.
 LEA COUNTY, NM

5. Apache currently has 130 active or new oil wells and 35 active or new injection wells in the unit. It is the goal of the project to increase production.

VIII. The Unit is on the north end of a north-northwest to south-southeast trending anticline. It is part of the Penrose Skelly trend and parallels the west edge of the Central Basin Platform. Dip is 1° to 2°. The Drinkard is ≈275 million years old, ≈256' thick, and consists of tan to dark gray shallow marine carbonates, many of which have been dolomitized. Core filling and replacement anhydrite are common in the limestone. Nodular anhydrite is common in the dolomite. Five per cent porosity cut off is used to determine pay zones. Impermeable shale and carbonates vertically confine the interval.

There are currently 155 Drinkard injection wells in New Mexico. The West Blinebry Drinkard Unit shares its east border with Apache's Northeast Drinkard Unit. Three other similar water floods, (East Blinebry Drinkard Units, Central Drinkard Unit, and Warren Blinebry Unit) are within a mile of the West Blinebry Drinkard Unit. The Central Drinkard Unit has been under water flood since the 1960s. Formation depths are:

Formation	WBDU 38	WBDU 39	WBDU 42
Quaternary	0'	0'	0'
anhydrite	1280'	≈1310'	1278'
Yates	≈2618'	≈2680'	2614'
Seven Rivers	≈2872'	≈2928'	2865'
Queen	≈3439'	≈3488'	3437'
Grayburg	≈3723'	≈3745'	3740'
San Andres	≈4011'	≈4052'	3958'
Glorieta	≈5169'	≈5220'	5172'
Blinebry	5672'	≈5663'	5657'
Tubb	6150'	≈6200'	6146'
Drinkard	6480'	6510'	6470'
highest proposed perf	6480'	6510'	6470'
lowest proposed perf	6729'	6762'	6722'
Abo	6734'	6767'	6727'
proposed PBTD	6767'	6762'	6770'
proposed TD	6770'	6770'	6780'

State Engineer records (Exhibit I) list three water wells within a mile (1610 meters) radius. Deepest of the water wells is 120'. One water well within a mile was found and sampled. The other two wells were dry. Sampled well CP 00162 & 00163 is in Section 9. A well in Section 15 was sampled, but is not in the State Engineer's database. That well is \approx 200 yards outside the closest mile radius. Their analyses are in Exhibit J. Ogallala aquifer is \approx 6 miles northeast.

No existing underground drinking water source is below the injection interval within a mile radius.

There will be >5000' of vertical separation and layers of salt and anhydrite between the bottom of the only likely underground fresh water source (red beds) and the top of the injection zone. (No water sands were reported in the red beds penetrated by these wells.) Produced water is currently being injected (194 wells) or disposed (9 wells) into the Blinebry-Tubb-Drinkard, San Andres, Grayburg, Queen, Seven Rivers, and Yates within T. 21 S., R. 37 E.

IX. The wells will be stimulated with acid.

X. No log is on file with NMOCD from #38. A gamma ray neutron log is on file with NMOCD from #39. Guard resistivity and acoustic velocity logs are on file with NMOCD from #42. GR/CBL/CCL logs will be run in each well and filed with NMOCD.

XI. One fresh water well is within the three 1-mile radii. It, and an additional well 200 yards beyond the radii, were sampled. Analyses from those wells are attached as Exhibit J.

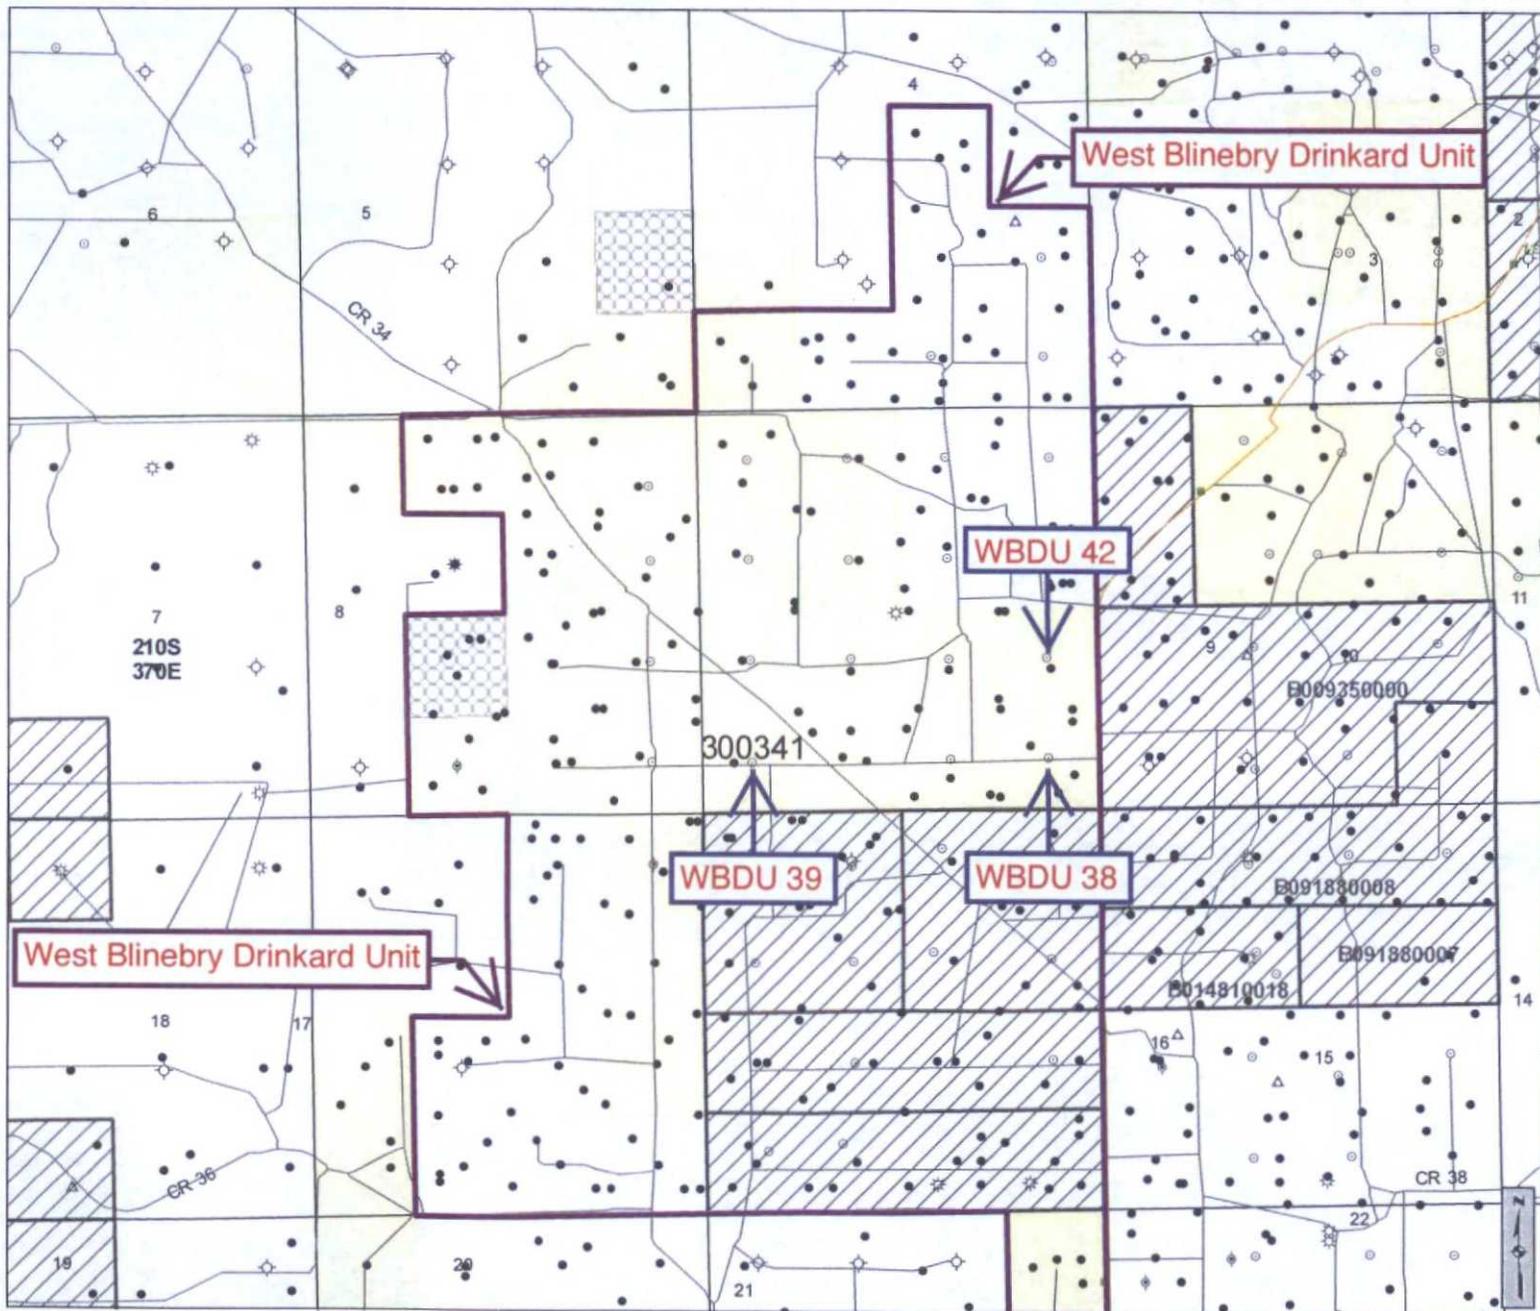

XII. Apache (Exhibit K) is not aware of any geologic or engineering data that may indicate the injection interval is in hydrologic connection with any underground sources of water. Closest Quaternary faults are >100 miles west and southwest. There are 155 Drinkard injection wells in New Mexico. Previously

approved water flood expansions (WFX-) in the unit include 854, 857, 913, 921, 922, 923, 924, 948, 952, 954, and 955.

XIII. A legal ad (see Exhibit L) was published June 9, 2016. Notice (this application) has been sent (Exhibit M) to the surface owner (Millard Deck Estate 4193), lessor (BLM), lessees (Chevron, ConocoPhillips, ExxonMobil, & Occidental Permian), operating rights holders (Chevron, ConocoPhillips, Devon, Energen, Barbara Hannifin, Mark Hannifin, Patrick Hannifin, Robert Hannifin, John H. Hendrix Corp., Kerr-McGee (Anadarko), Lanexco, Robert Lansford, NM Co. Inc., Oxy USA WTP, Penroc Oil Corp., Petro Strategies, Tommy Phipps, Six Aeches, & St. Croix Corp.), and non-Drinkard operators (Breck, Chevron, & XTO) in the areas of review. Apache operates all Drinkard wells in the areas of review.

Form C-102
Supersedes C-128
Effective 1-1-65

All distances must be from the outer boundaries of the Section.

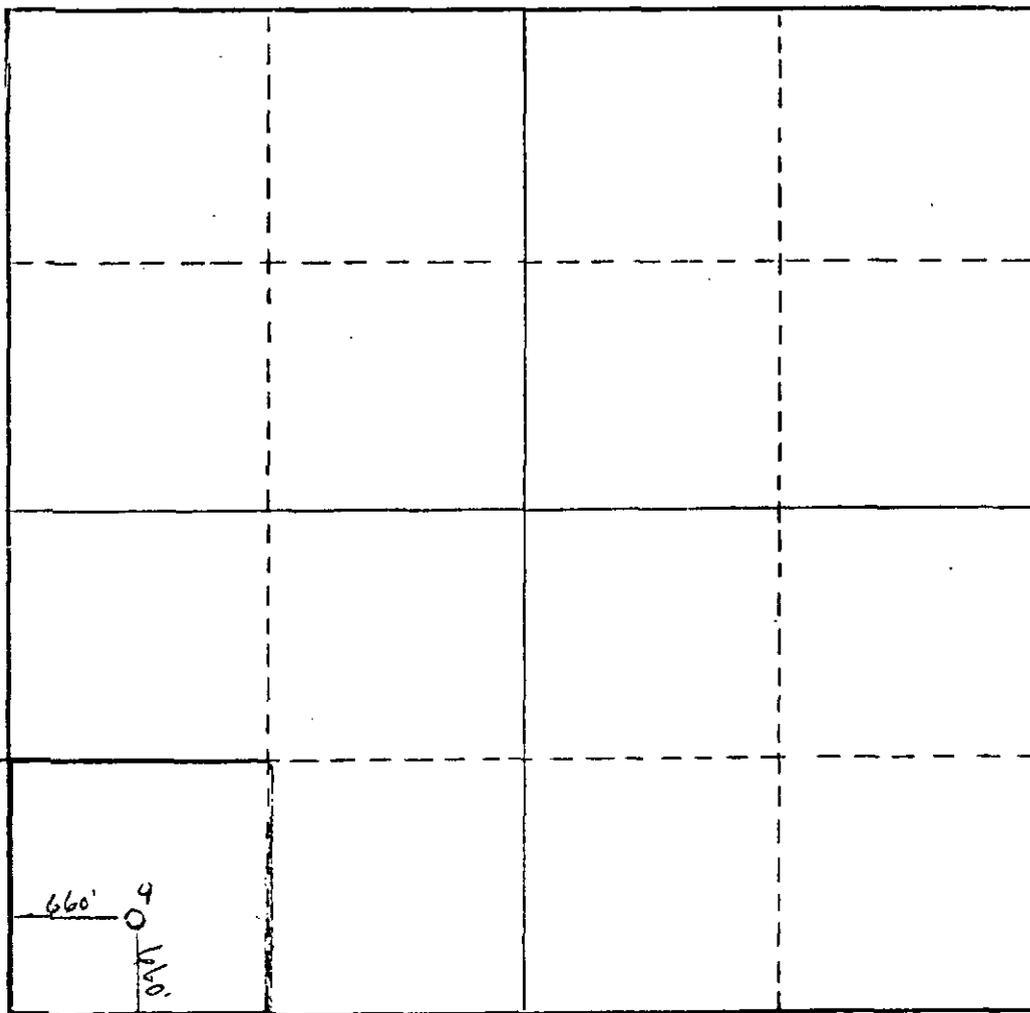

Operator Continental Oil Company		Lease Hawk B-1 now WBDU 39		Well No. 9
Unit Letter H	Section 9	Township 20	Range 37	County Lea
Actual Footage Location of Well: 660 feet from the South line and 660 feet from the West line				
Ground Level Elev. 3519	Producing Formation Blinebry	Pool Blinebry Gas	Dedicated Acreage: 40 Acres	

1. Outline the acreage dedicated to the subject well by colored pencil or hachure marks on the plat below.
2. If more than one lease is dedicated to the well, outline each and identify the ownership thereof (both as to working interest and royalty).
3. If more than one lease of different ownership is dedicated to the well, have the interests of all owners been consolidated by communitization, unitization, force-pooling, etc?

Yes No If answer is "yes," type of consolidation Not Applicable

If answer is "no," list the owners and tract descriptions which have actually been consolidated. (Use reverse side of this form if necessary.) _____

No allowable will be assigned to the well until all interests have been consolidated (by communitization, unitization, forced-pooling, or otherwise) or until a non-standard unit, eliminating such interests, has been approved by the Commission.

CERTIFICATION

I hereby certify that the information contained herein is true and complete to the best of my knowledge and belief.

Water Column/Average Depth to Water

(A CLW##### in the POD suffix indicates the POD has been replaced & no longer serves a water right file.)

(R=POD has been replaced,
O=orphaned,
C=the file is closed)

(quarters are 1=NW 2=NE 3=SW 4=SE)
(quarters are smallest to largest)

(NAD83 UTM in meters)

(In feet)

Subject: FW: shallow faulting in the vicinity of WBDU
Date: January 11, 2016 at 4:27 PM
To: brian@permitswest.com
Cc: Shapot, Bret Bret.Shapot@apachecorp.com

Brian,

As per Mark's comments below, our G&G staff has taken a look at the potential issue of shallow faulting in the WBDU area and have concluded there is none present across the area and no danger of shallow faulting as a conduit to groundwater contamination.

Regards,

MARTIN J. OLDANI

Subject: shallow faulting in the vicinity of WBDU

Martin:

In reference to the meeting this morning where we discussed the possibility of shallow faulting in the WBDU area and its potential impact on the permitting of the injection well(s) into the Drinkard, I submit to you the attached slide set from me and Justin. You will see that we have done several extractions on the seismic data and there is no indication of faulting above the Glorieta which is well above the Drinkard and below the younger evaporites. Also, as we suspected, there are no surface faults mapped in the area – the nearest being more than 50 miles away.

Please contact me or Justin if you have further questions.

Sincerely,

DR. MARK PASLEY

LEGAL NOTICE June 9, 2016

Apache Corporation is applying to change the injection interval and injection rate of 3 existing water injection wells in the West Blinberry Drinkard Unit in Section 9, T. 21 S., R. 37 E., Lea County, NM. Injection will be in the Drinkard zone. Maximum injection rate will be 3,000 bwpd per well. Maximum injection pressure will be 1,120 psi. The wells are 3 miles NNW of Eunice, NM. Well locations and injection intervals are:

WBDU Well	Location	Injection Interval
38	660 FSL & 1980 FEL	6480' - 6729'
39	660 FSL & 660 FWL	6510' - 6762'
42	1980 FSL & 660 FEL	6470' - 6722'

Interested parties must file objections or requests for hearing with the NM Oil Conservation Division, 1220 South Saint Francis Dr., Santa Fe, NM 87505 within 15 days. Additional information can be obtained by contacting: Brian Wood, Permits West, Inc., 37 Verano Loop, Santa Fe, NM 87508. Phone number is (505) 466-8120.

 3903 Bellaire Blvd.
 Houston TX 77025

Apache Corporation is applying (see attached application) to change the water injection interval in 3 of its existing West Blinebry Drinkard Unit wells 3 miles NNW of Eunice, NM. As required by NM Oil Conservation Division (NMOCD) Rules, I am notifying you of the following project. This letter is a notice only. No action is needed unless you have questions or objections.

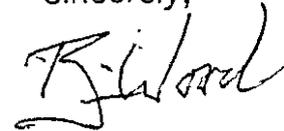

WBDU Well	9-21s-37e Lea County NM	Proposed Drinkard Injection Interval	Proposed TD
38	660 FSL & 1980 FEL	6480' - 6729'	6770'
39	660 FSL & 660 FWL	6510' - 6762'	6770'
42	1980 FSL & 660 FEL	6470' - 6722'	6780'

Applicant Name: Apache Corporation (432) 818-1062
Applicant's Address: 303 Veterans Airpark Lane, #3000, Midland, TX 79705

Submittal Information: Application for injection will be filed with the NMOCD. If you have an objection, or wish to request a hearing, then it must be filed with the NMOCD within 15 days of receipt of this letter. NMOCD address is 1220 South St. Francis Dr. Santa Fe, NM 87505. NMOCD phone is (505) 476-3440.

Please call me if you have any questions.

Sincerely,

Brian Wood

The Sundries on line are incorrect.

This morning's attachment revises the Sundries that are on line.
