Application for surface commingle, Vacuum Grayburg San Andres Pool, Lea County, NM (T18S, R34E, Section 1 & 2)

Dear Sirs,

Chevron U.S.A. Inc. respectfully requests administrative approval to surface commingle oil, gas and water production from the Vacuum Grayburg San Andres Pool through Chevron's Vacuum Grayburg San Andres Unit Central Tank Battery. Chevron requests the approval to minimize surface disturbance and future traffic by concentrating activities at one battery. Wells producing to this battery include the Vacuum Grayburg San Andres Unit wells listed in the following page. These wells are located in Section 1 & 2, T 18S, R 34E in Lea County, New Mexico. Chevron U.S.A. would also like to commingle the oil and water from all of the wells located in the current ABO Reef Consolidated Battery with the Vacuum Grayburg San Andres Unit Central Battery. A list of all wells currently routed to the Abo Reef Consolidated Battery can be found on the following pages.

The working interest and federal royalty rate are the same for all leases involved in this request (100% Chevron). These wells were completed in the 1970's. Each lease will be measured continuously through a two-phase metering separator located at the VGSA central tank battery. This two phase separator will be equipped with a Coriolis meter that will quantify the amount of production (oil and water) all of the wells that are not in the test separators make. The water and oil amounts from the two phase separator as well as the water and oil numbers from the two test separators will be added together to obtain the total water and oil produced for the Abo Reef Battery. The gas will be metered and sold the same as it was before to Targa. The gas will come off of the two test separators and will be metered at each and then sent to the gas scrubber. The gas off of the two phase separator will also go to the gas scrubber where it will be commingled with the gas at the test separators. Once the gas leaves the gas scrubber it will be sold to Targa at the gas sales meter.

Two of the wells each day will be diverted to one of the two test separators (A or B) to go through a 24-hour testing period to quantify the amount of production (oil, water, and gas) from each well per day.

Sincerely,

Cindy Herrera-Murillo

See Attachment	See Pages 6-8	See Attachment	VGSAU	1750	37.7	450	926
See Attachment	See Page 7	See Attachment	ABO Reef Dinkard, Blineberry	182	39	350	1364

Oil & Gas metering:

The former ABO Reef Battery will be metered the same way that it was previously in the original commingling agreement for the wells (App No. PTGW 1007537736). The wells will go into a common production header where two wells will be sent to two separate 3-phase test separators for a 24-hour to quantify gas, water, and oil volumes for each well at least once a month. The oil and water from the test separators will be measured through a turbine meter and the gas from the test separators will be measured through an orifice meter and then sold through a sales meter to Targa. The wells that are not in the test separator will be sent to a two-phase separator. The oil and water from the two-phase separator will be measured via a Coriolis meter before being sent to the VGSAU Battery. The gas from the two-phase separator will be measured through an orifice meter and will be sold through a sales meter to Targa. The wells at the former ABO Reef Battery are HOBBS N ST 001, HOBBS N ST 2, HOBBS N ST 5, NM AB ST 02, NM AB ST 09, NM AB ST 09, NM AB ST 10, NM R NCT 4 #3, NM R NCT 4 #4, NM R NCT 4 #5, NM R NCT 4 #6, NM R NCT 4 #7, STATE AN 01 BLN, STATE AN 02 H, STATE AN 03 BLN, STATE AN 04, STATE AN 05 H, STATE AN 06, STATE AN 11B, STATE AN 13, STATE AN 14 BLN, STATE AN 15 BLN.

The VGSAU Satellite 1 location will have the wells going to a common production header and will then have the option to go to a 2-phase test separator or a 2-phase production separator. The well that goes to the test separator will have a 24-hr to quantify the amount of oil, water, and gas. The water and oil coming off of the test separators will be measured through a Coriolis meter. The gas from the test separator will be measured through a Coriolis meter. Each well at VGSAU Sat. 1 will go through the test separator for 24 hours at least once a month. The remaining wells that will not be in the test separator for their monthly test will go to the production separator. The oil and water from the production separator will be measured through a Coriolis meter. The gas coming off of the test separator will go to the gas scrubber as well as the gas from the production separator. The gas from the gas scrubber will go through a sales meter to Targa. The water and oil from Sat. 1 one will go in a common line to the VGSAU Battery. The wells at the VGSAU Satellite 1 are: VGSAU 006, VGSAU 007, VGSAU 021, VGSAU 022, VGSAU 036, VGSAU 037, VGSAU 051, VGSAU 052, VGSAU 053, VGSAU 054, VGSAU 064, VGSAU 066, VGSAU 137, VGSAU 138H, VGSAU 139, VGSAU 152, VGSAU 153, VGSAU 154.

APPLICATION FOR COMMINGLING AT A COMMON CENTRAL TANK BATTERY. CHEVRON USA INC. VACUUM GRAYBURG SAN ANDRES UNITS

remaining wells that will not be in the test separator for their monthly test will go to the production separator. The oil and water from the production separator will be measured through a Coriolis meter. The gas coming off of the test separator will go to the gas scrubber as well as the gas from the production separator. The gas from the gas scrubber will go through a meter to the Chevron Buckeye Gas Plant. The water and oil from Sat.2 one will go in a common line to the VGSAU Battery: VGSAU 040, VGSAU 041, VGSAU 042, VGSAU 043, VGSAU 055, VGSAU 056, VGSAU 057, VGSAU 140, VGSAU 141, VGSAU 142, VGSAU 143, VGSAU 155, VGSAU 156, VGSAU 157, VGSAU 158, VGSAU 159LLW, VGSAU 228, VGSAU 258, and VGSAU 405.

The VGSAU Satellite3 location will have the wells going to a common production header and will then have the option to go to a 2-phase test separator or a 2-phase production separator. The well that goes to the test separator will have a 24-hr to quantify the amount of oil, water, and gas. The water and oil coming off of the test separators will be measured through a Coriolis meter. The gas from the test separator will be measured through a Coriolis meter. Each well at VGSAU Sat. 3 will go through the test separator for 24 hours at least once a month. The remaining wells that will not be in the test separator for their monthly test will go to the production separator. The oil and water from the production separator will be measured through a Coriolis meter. The gas coming off of the test separator will go to the gas scrubber as well as the gas from the production separator. The gas from the gas scrubber will go through a sales meter to Targa. The water and oil from Sat.3 one will go in a common line to the VGSAU Battery. The wells at VGSAU Satellite 3 are: VGSAU 008, VGSAU 009, VGSAU 010, VGSAU 012H, VGSAU 013H, VGSAU 024H, VGSAU 025, VGSAU 026, VGSAU 039, VGSAU 110H, VGSAU 126H, VGSAU 128H, VGSAU 212, VGSAU 227, and VGSAU 327.

The VGSAU Battery will meter its oil through a LACT sales unit after it is separated from the water and placed into the oil stock tanks. The water will be separated from the two gun barrels in the battery and will then be transferred to a 10k bbl water tank and metered before it is reinjected into the VGSAU field or disposed in an SWD. The gas from the VGSAU battery will be sent through a VRU or GRU and then pass through a meter before it is sent to the Chevron Buckeye Gas Plant.

Process and Flow Descriptions:

The flow of production is shown in detail on the enclosed facility flow diagram and map which shows the lease boundaries, location of wells, and locations of the flow lines, facility, and gas sales meter. The commingling of this will not result in reduced royalty or improper measurement of production. The proposed commingling will reduce the surface facility footprint and overall emissions.

Chevron U.S.A. Inc. understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument.

The VGSAU Central tank battery is located at: Lot 3 of Section 2, Township 18 South, Range 34 East, N.M.P.M., Lea County, New Mexico

The ABO Reef Battery is located at: Lot B of Section 7, Township 18 South, Range 35 East, N.M.P.M., Lea County, New Mexico

All royalty and overriding interest owners will be notified. Chevron is the only working interest owner.

**Economic Justification Work Sheet
 VGSA UNIT Central Tank Battery**

Unit	Royalty Rate	Federal Tract Percentage of Total Unit Area	BOPD	Oil Gravity (@60 deg)	Value / BBL	MCFPD	DRY BTU	Value / MCF
VGSAU	12.5%	0%	1750	37.7	36.40	300	926	1.62
ABO Reef Consolidated Battery	12.5%	0%	182	39	36.4	350	1364	1.62

Economic combined gas production	BOPD	Oil Gravity (@60 deg)	Value / BBL	MCFPD	DRY BTU	Value / MCF
	1930	38.4	36.40	750	1145	1.62

The commingling of gas between the captioned wells will not have an impact on the value of the production, as the oil to be commingled has similar APIs (36-38). The oil, gas, and water from the VGSAU wells have been comingled already and come from a common pool.

Application for surface commingling, Vacuum Grayburg San Andres Pool, Lea County, NM (T18S, R34E, Section 1 & 2)

Dear Sirs,

Chevron U.S.A. Inc. respectfully requests administrative approval to surface commingle oil, gas and water production from the Vacuum Grayburg San Andres Pool through Chevron's Vacuum Grayburg San Andres Unit Central Tank Battery. Chevron requests the approval to minimize surface disturbance and future traffic by concentrating activities at one battery. Wells producing to this battery include the Vacuum Grayburg San Andres Unit wells listed in the following page. These wells are located in Section 1 & 2, T 18S, R 34E in Lea County, New Mexico.

The working interest and federal royalty rate are the same for all leases involved in this request (100 Chevron,). These wells were completed in the 1970's. This lease will be monitored at three satellite locations. Each satellite location is equipped with a production separator that measures oil and water via a Coriolis meter and the gas is sent to a gas scrubber. Each satellite location is also equipped with a test separator measuring the oil, water, and gas from one well for 24 hours once a month. The gas from the test separator and production separator will be sent to a gas scrubber which will send the gas to a sales meter at two of the locations and to the Chevron Buckeye Plant at the third location. The gas will be metered after the gas scrubber at each location. The oil and water will then be sent from the satellite locations to the VGSAU Battery. The oil will be measured by an oil LACT Unit and the water will be measured via turbine meters before it is sent to a water tank used for reinjection. The remaining gas that breaks off in the vessels at the VGSAU battery will be captured by a Gas Recovery Unit and sent through a sales meter. The remaining gas that breaks off in the tanks at the VGSAU Battery will be captured by a Vapor Recovery Unit and sent down a sales meter for measurement.

Sincerely,

Cindy Herrera-Murillo

Re: VGSAU Surface Commingle

Dear Mike,

Please find attached current C102's for the wells pertaining to the VGSAU surface commingle.

There should be 75 current C102's. If you have any questions, please give me a call.

Thanks,

Cindy Herrera-Murillo
