NATURE OF RELEASE

Type of Release.	Produced Water	Volume of Release:	20 Bbls	Volume Recovered:	20 Bbls
Source of Release	Transfer pump	Date and Hour of Occurrence	2/16/2017	Date and Hour of Discovery	2/16/2017 - 12:00 hrs MT
Was Immediate Notice Given?	<input type="checkbox"/> Yes <input type="checkbox"/> No <input checked="" type="checkbox"/> Not Required	If YES, To Whom?	NMOCD Crystal Weaver & Michael Bratcher, BLM Shelly Tucker		
By Whom?	Karolina Blaney	Date and Hour:	2/17/2017 - 7:20 hrs MT		
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.	N/A		

If a Watercourse was Impacted, Describe Fully.* N/A

Describe Cause of Problem and Remedial Action Taken.*
The spill was caused by faulty design of the automation system; transfer pump didn't have a low lever shut off and was running dry causing the seal to fail from the heat. Approximately 20 bbls of water was spilled inside lined SPCC containment which allowed for 100% fluid recovery. This spill did not impact the environment.

Describe Area Affected and Cleanup Action Taken.*
The containment liner has been inspected immediately after the spill has occurred. Based on the inspection, there is no evidence that the spilled fluids have left the containment. Therefore, the environment was not impacted by this spill.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Subject: WPX North Brushy Draw 35-2H - initial spill notification

Good morning,
WPX had a spill yesterday, 2/16/17, at the North Brushy 35-2 well pad. API # 30-015-40006; A-35-25S-29E. The spill was caused by faulty design of the automation system; transfer pump didn't have a low lever shut off and was running dry causing the seal to fail from the heat. Approximately 20 bbls of water was spilled inside lined SPCC containment which allowed for 100% fluid recovery. This spill did not impact the environment. The C 141 report will be submitted within the next 15 days.
Please let me know if you have any questions.

I hope this is the last spill I'm reporting today.

Thank you and have a great weekend
