

Application of Apache Corporation for administrative
approval of an unorthodox well location:

40 acres – 1210' FNL & 1470' FEL
Section 9, Township 21 South, Range 37 East, NMPM
Lea County, New Mexico

PRIMARY OBJECTIVE: Blinebry, Tubb and Drinkard

In support:

1. Apache Corporation (Apache) is the operator of the proposed **Southland Royalty A #16** well (**Exhibit 1**).
2. The proposed unorthodox location encroaches toward the following wells which are, or have been productive from various combinations of the Blinebry, Tubb, and Drinkard (**Exhibit 2**). All four units are contained within one oil and gas lease, with common working and revenue interest owners. The unit in which it is proposed has a noncommercial Blinebry, Tubb, and/or Drinkard well.

OPER	WELL	LOC	RESRVR	CUM B-T-D O/G/W	DAILY B-T-D O/G/W	CURRENT POOL

3. The proposed **Southland Royalty A #16** unorthodox Blinebry, Tubb, and Drinkard location of 1210' from north line and 1470' from east line is necessitated by geological and drainage considerations, as well as to prevent waste:

a. **Blinebry, Tubb and Drinkard**

The Blinebry, Tubb, and Drinkard Formations are members of the Yeso Group, Permian Leonardian in age. Portions of the Eunice area were

unitized by Shell in 1987 into the Northeast Drinkard Unit for waterflood operations. The unit is governed by the North Eunice Blinebry-Tubb-Drinkard Field Rules. The stratigraphic relationships, specifically top of Blinebry being 75' above the Blinebry Marker, and fluid contacts, specifically Blinebry GOC at -2255 and Drinkard OWC at -3225, employed by Shell have also been used here.

All three formations are shallow marine carbonates, consisting primarily of dolomite. The Tubb can have appreciable clastic content and the Drinkard becomes limey toward its base. Anhydrite can occur throughout the interval. Structure is significant in that it controls the fluid distribution. Any oil water contacts in these formations occur miles from this location.

Apache approached its evaluation by mapping the following on each of the four major reservoirs (Blinebry Gas Cap, Blinebry Oil Leg, Tubb, and Drinkard):

1. Structure (primarily to locate fluid contacts on logs and cross sections),
2. Clean carbonate (less than 40 APIU gamma ray),
3. Net to gross ratio using only modern logs from which a cross plotted porosity could be calculated,
4. Net pay (h) which was either picked from modern logs or calculated by multiplying the clean carbonate grid by the net to gross ratio grid (thus estimating net pay for wells without modern logging suites),
5. Average porosity (Φ_{IA}), using only modern logs from which a average porosity could be calculated,
6. Porosity*Feet (Φ_{IH}) which was either calculated from modern logs or calculated by multiplying the net pay (h) grid by the average porosity (Φ_{IA}) grid.

Reservoir engineering used the four Φ_{IH} maps to estimate drainage of each offsetting well in each reservoir. Recoverable reserves for this location are calculated as the volumetrics under a 20 A radius (less if the direct offsets were not capable of draining 20 A) with reduced reservoir pressure where drainage has occurred. Drainage offsetting this location is as follows:

SEC	LEASE NAME	WELL	PROD ZONE NAME	EUR			DRAINED ACRES
				OIL	WATER	GAS	
9	SOUTHLAND ROYALTY A	1	BLINEBRY GAS CAP	96,377	10,048	1,039,642	16
9	SOUTHLAND ROYALTY A	2	BLINEBRY GAS CAP	77,263	23,302	587,096	5
9	SOUTHLAND ROYALTY A	6	BLINEBRY GAS CAP	179,988	35,325	5,267,507	110
9	SOUTHLAND ROYALTY A	7	BLINEBRY GAS CAP	119,219	13,566	1,042,548	8
9	SOUTHLAND ROYALTY A	1	BLINEBRY OIL LEG	96,377	10,048	1,039,642	21
9	SOUTHLAND ROYALTY A	2	BLINEBRY OIL LEG	77,263	23,302	587,096	17
9	SOUTHLAND ROYALTY A	6	BLINEBRY OIL LEG	179,988	35,325	5,267,507	26

9	SOUTHLAND ROYALTY A	7	BLINEBRY OIL LEG	119,219	13,566	1,042,548	25
9	SOUTHLAND ROYALTY A	1	TUBB	6,387	1,071	683,573	45
9	SOUTHLAND ROYALTY A	2	TUBB	38,101	19,031	3,423,424	166
9	SOUTHLAND ROYALTY A	7	TUBB	931	656	12,444	1
9	SOUTHLAND ROYALTY A	1	DRINKARD	184,617	8,870	2,552,272	48
9	SOUTHLAND ROYALTY A	2	DRINKARD	302,112	34,523	943,428	106
9	SOUTHLAND ROYALTY A	6	DRINKARD	90,933	16,735	1,031,126	21
9	SOUTHLAND ROYALTY A	7	DRINKARD	81,770	8,811	913,742	27

Volumetrics for the proposed location are as follows:

		PROD ZONE NAME	RESERVOIR	DRAINAGE	EUR	
					OIL	GAS
SOUTHLAND ROYALTY A	16	BLINEBRY GAS CAP	900	20	960	96
		BLINEBRY OIL LEG	2200	20	104,148	677
		TUBB	700	20	340	34
		DRINKARD	900	20	22,318	145
		TOTAL			127,766	952

Exhibit 3 is a stratigraphic cross section, hung on the top of the Blinebry, trending north to south; passing near several wells Apache is considering drilling. It illustrates several critical points:

1. Wireline logging suites vary greatly. Many wells do not have reliable gamma ray or porosity logs.
2. Tops are easily correlated, but the presence of tight dolomite/anhydrite and shale **compartmentalizes** the reservoir.
3. All the reservoirs are low porosity.

b. Blinebry Gas Cap (Exhibit 4)

Thickness of the Blinebry Gas Cap is related to the subsea top of the Blinebry. The higher the top, the thicker the gas cap. Using a 5% threshold, porosity averages 10.2% in 118 wells selected for analysis. PhiH at this location is expected to be 5.0'.

c. Blinebry Oil Leg (Exhibit 5)

Thickness of the Blinebry Leg is related to the subsea top of the Blinebry, the higher the top, the thinner the gas cap. Using a 5% threshold, porosity averages 8.4% in 146 wells selected for analysis. PhiH at this location is expected to be 10.9'.

c. Tubb (Exhibit 6)

Thickness of the Tubb varies little in the area, ranging mostly from 300' to 360'. Using a 5% threshold, porosity averages 8.4% in 145 wells selected for analysis. PhiH at this location is expected to be 3.6'.

d. Drinkard (Exhibit 7)

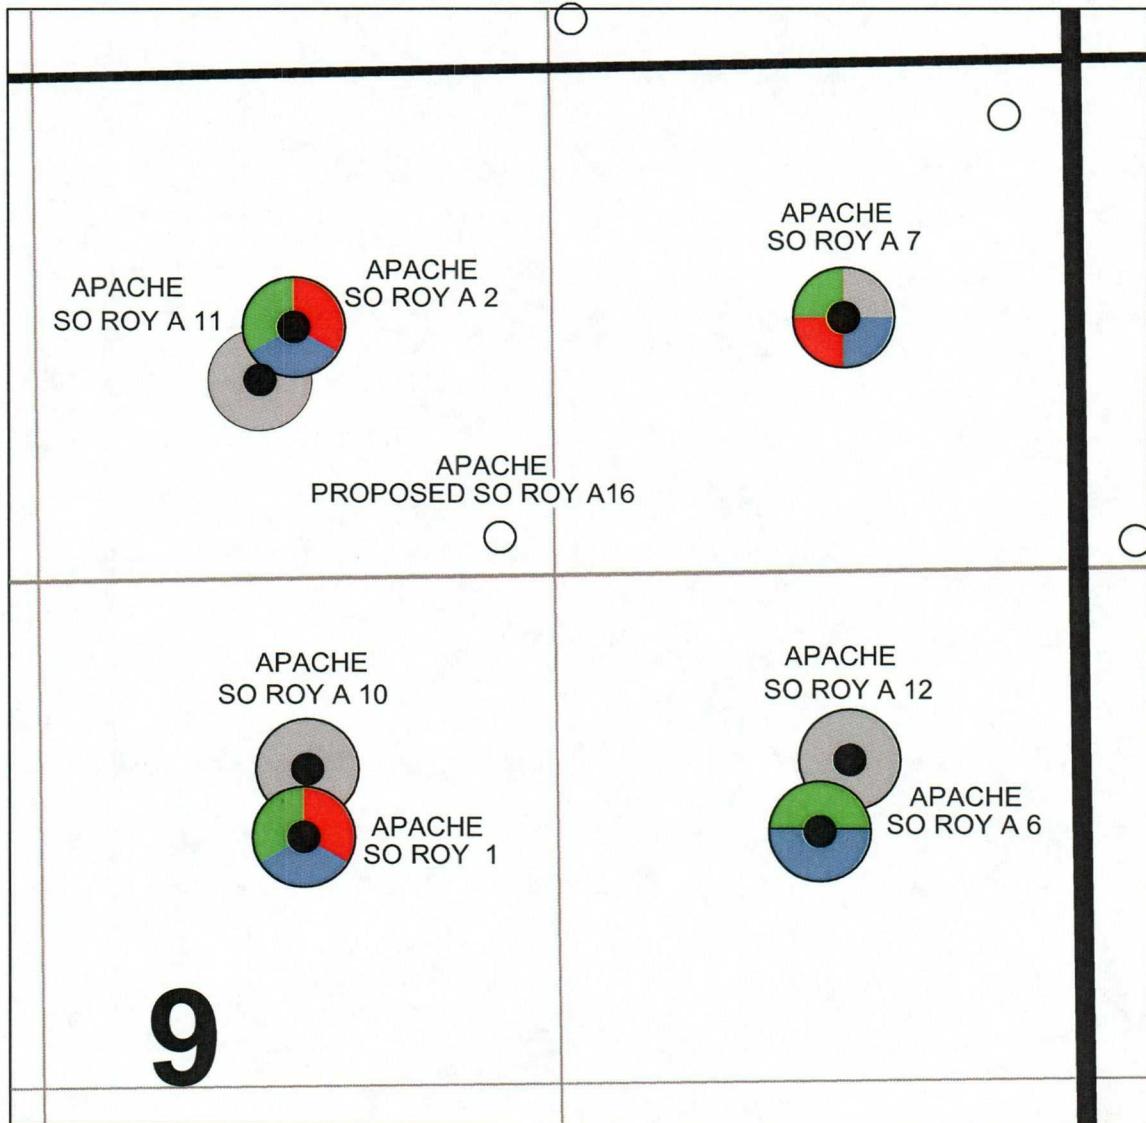

The thickness of the Drinkard is also related to its subsea position, the higher the top, the thicker the interval. Using a 5% threshold, porosity averages 9.3% in 128 wells selected for analysis. PhiH at this location is expected to be 6.1'.

e. B-T-D (Exhibit 8)

The expected PhiH in the combined interval is 25.7'.

4. Notice

5. Approval of this application will afford the interest owners in this spacing unit an opportunity to recover oil and gas which would not otherwise be recovered and to do so without violating correlative rights.

*Southland Royalty "A" No. 1
API No. 30-025-06442
Unit G, Section 9, Township 21 South, Range 37 East, NMPPM,
Lea County, New Mexico.
Blinebry Oil & Gas (Oil - 06660),
Tubb Oil & Gas (Oil - 60240),
Drinkard (Oil - 19190) and
Wantz-Abo (Oil - 62700) Pools*

Dear Ms. Anderson:

Reference is made to your recent application for an amendment to Division Order No. R-7537, which order authorized the downhole commingling of Blinebry Oil & Gas, Tubb Oil & Gas, and Drinkard Pool production within the Southland Royalty "A" Well No. 1. It is our understanding that the Wantz-Abo Pool is proposed to be added as the fourth commingled zone within the wellbore.

It appearing that the subject well qualifies for approval for such amendment pursuant to the provisions of Rule 303.C., and that reservoir damage or waste will not result from such downhole commingling, and correlative rights will not be violated thereby, you are hereby authorized to commingle the production as described above and any Division Order which authorized the dual completion and required separation of the zones is hereby placed in abeyance.

In accordance with the provisions of Rule 303.C., the daily allowable producing rates from the well are hereby established as follows:

Oil 107 B/D

Gas 428 MCF/D

Water 214 B/D

Assignment of allowable to the well and allocation of production from the well shall be on the following basis:

*Administrative Order DHC-2477**Apache Corporation**October 12, 1999**Page 2*

Blinebry Oil & Gas Pool	Oil-44%	Gas-15%
Tubb Oil & Gas Pool	Oil-13%	Gas-12%
Drinkard Pool	Oil-43%	Gas-7%
Wantz-Abo Pool	Oil-0%	Gas-66%

REMARKS: The operator shall notify the Hobbs District Office of the Division upon implementation of the commingling process.

Pursuant to Rule 303.H., the commingling authority granted herein may be rescinded by the Division Director if conservation is not being best served by such commingling.

Approved at Santa Fe, New Mexico on this 12th day of October, 1999.
