Oil & Gas metering:

Oil production from the Cypress 34 Federal #1 Battery will be separated and measured at the facility and then sent to the Cypress 33 Federal #1 Battery. Oil from the Cypress 33 Federal #1 Battery and Goodnight 27 Federal #1 Battery will be separated and measured at their respective facility and then sent to the Goodnight 27 Federal #4 Battery and combined into oil storage tanks at the Goodnight 27 Federal #4 Battery. All oil will be sold through a LACT from tanks located at the Goodnight 27 Federal #4 Battery. Production will be allocated back to individual wells based on well tests.

All gas production from the Goodnight 27 Federal #1 Battery, Goodnight 27 Federal #4 Battery, Cypress 34 Federal #1 Battery and Cypress 33 Federal #1 Battery will be separated, measured and sent to sales from their respective facility.

All water from the Cypress 34 Federal #1 Battery, Goodnight 27 Federal #1 Battery and Goodnight 27 Federal #4 Battery is sent to the Cypress 33 Federal #1 Battery before being sent to the Cedar Canyon water disposal distribution system.

The oil and gas meters will be calibrated on a regular basis per API, NMOCD and BLM specifications. The BLM and OCD will be notified of any future changes to the facility.

Cypress 34 Federal #1 Battery The production from each well will flow through a common two-phase 6'x 20' production separator then flow to a production heater treater. The oil will flow to four tanks and then will be sent through a turbine meter (S/N *) to the Cypress 33 Federal #1 Battery. Gas is sent from the production separator and heater treater to a check meter (S/N 83217) then offsite to Energy Transfer sales meter (S/N 57325).

All wells have been on production for over a year and are in Range 3 of decline. The wells can be reasonably expected to have a decline rate of less than 5 percent, as specified in Hearing Order R-14299. Therefore, wells will be tested at least once per month for a minimum of 24 hours through a three phase 4'x 10' test separator with turbine meters for oil (S/N 389717), water (S/N 389718) and an orifice meter for gas (S/N 83218T).

Gas vapors coming off the oil tanks will be sent through a vapor recovery unit and recombined into the gas stream before going through previously referenced gas check meter.

Cypress 33 Federal #1 Battery The production from each well will flow through a common three phase 6'x 20' production separator and a heater treater. The oil will flow to four tanks and be sent through a Coriolis meter (S/N 14156064) and then sent to the Goodnight 27 Federal #4 Battery. Gas is sent through Energy Transfer sales meter (S/N 57211). Water from all facilities will flow through transfer meter (S/N 66002) or meter (S/N 07480) before being sent to the Cedar Canyon water disposal distribution system.

All wells except the Cypress 33 Federal Com #10H have been on production for over a year and are in Range 3 of decline. The wells can be reasonably expected to have a decline rate of less than 5 percent, as specified in Hearing Order R-14299. Therefore, wells will be tested at least once per month for a minimum of 24 hours through three-phase 4'x 10' test separator with turbine meters for oil (S/N 12029239921), water (S/N 62015-71) and an orifice meter for gas (S/N T144403260).

The Cypress 33 Federal Com #10H will have its own dedicated separation and measurement equipment and tested daily prior to Range 1 of decline, will be tested at least three times per month for a minimum of 24 hours during Range 1 of decline, will be tested at least twice per month for a minimum of 24 hours during Range 2 of decline, and will be tested at least once per month for a minimum of 24 hours during Range 3 of decline, as specified in Hearing Order R-14299. Meter S/N's are TBD after well completion.

Gas vapors coming off the oil tanks will be sent through a vapor recovery unit and metered (S/N 65807R) before being recombined into the gas lift stream.

✓ **Goodnight 27 Federal #1 Battery** The production from each well will flow through a common three phase 5'x 10' production separator then flow to a production heater treater. The oil will flow to three tanks and then sent through a Coriolis meter (S/N 3167117) before being sent to the Goodnight 27 Federal #4 Battery. Gas is sent from the production separator and heater treater through check meter (S/N 83242P) then to Energy Transfer sales meter (S/N 57324). Gas from the Goodnight 26 Federal #1H, Goodnight 27 Federal #2H, 3H, 4H and 5H is separated and measured at their respective well pads before recombining at the battery prior to the sales point.

All wells have been on production for over a year and are in Range 3 of decline. The wells can be reasonably expected to have a decline rate of less than 5 percent, as specified in Hearing Order R-14299. Therefore, wells will be tested at least once per month for a minimum of 24 hours through a three phase 30"x 10' test separator and test heater treater with turbine meters for oil (S/N 10267), water (S/N 371661) and an orifice meter for gas (S/N 83242).

Gas vapors coming off the oil tanks will be sent through a vapor recovery unit and metered (S/N 83242V) before being recombined into the gas stream prior to the previously referenced sales meter.

Goodnight 27 Federal #4 Battery The production from each well will flow through a common three phase 8'x 20' production separator. The oil will flow to three tanks where it will be combined with the oil production from the other 3 facilities stated above. Oil will be recirculated through a heater treater and then to a fourth oil tank. All oil will be sent through pipeline LACT meter (S/N*) to be sold or truck LACT meter (S/N *) as a contingency. Gas production will be metered by one of two Oxy check meters (S/N 14922PS or S/N 14922P) and sent to Energy Transfer Sales Meter (S/N 57324).

During testing phase production will be sent through three phase 6'x 20' test separator with turbine meters for oil (S/N 64086), water (S/N 64079) and an orifice meter for gas (S/N 14922T) or three phase 6'x 20' test separator with turbine meters for oil (S/N 440482), water (S/N 442065) and an orifice meter for gas (S/N 696922TT).

All wells except the Cypress 33 Federal #9H and the Cypress 34 Federal #12H have been on production for over a year and are in Range 3 of decline. The wells can be reasonably expected to have a decline rate of less than 5 percent, as specified in Hearing Order R-14299. Therefore, wells will be tested at least once per month for a minimum of 24 hours. The Cypress 33 Federal #9H and the Cypress 34 Federal #12H have been on production for at least 3 months after peak production and are in Range 2 of decline, and therefore will be tested at least twice per month for a minimum of 24 hours until entering Range 3 of decline.

Process and Flow Descriptions:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map detailing the lease boundaries and well locations as well as a plat showing the right-of-way for each battery. Commingling this production is the most effective means of producing the reserves. OXY USA INC understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. These applications will be submitted separately for approval per NMOCD and BLM regulations.

Pursuant to Statewide rule 19 15 12 10(C)(4)(g) OXY USA INC requests the option to include additional pools or leases within the defined parameters set forth in the order for future additions.

The working interest, royalty interest and overriding royalty interest owners have been notified of this proposal by certified mail (see attached).

ADMINISTRATIVE POOL/LEASE COMMINGLING ORDER

Administrative Order PLC-385
Administrative Application Reference No. pPRG1326656098

OXY USA WTP LP
Attn: Ms. Jennifer Duarte

Pursuant to your application received on September 20, 2013, OXY USA, INC. (OGRID 16696) is hereby authorized to surface commingle oil and gas production from the following pools located in Eddy County, New Mexico.

South Laguna Salado; Bone Spring	(96857)
Cedar Canyon; Bone Spring	(11520)
Northeast Harroun Ranch; Delaware	(96887)
Southwest Nash Draw; Delaware	(97148)

and from the diversely owned wells identified on Exhibit A hereto.

Each well will produce only from the pool identified with such well on Exhibit A. No downhole commingling is authorized.

Oil and gas production will be commingled and measured at three central tank batteries, located, respectively, at the well sites of the **Cypress 33 Federal Well No. 1H** in Unit P of Section 33-23S-29E, Eddy County; the **Cypress 34 Federal Well No. 1H** in Unit P of Section 34-23S-29E, Eddy County; and the **Goodnight 27 Federal Well No. 1H** in Unit N of Section 27-23S-29E, Eddy County. Production from each well will be transported to the battery identified with such well on Exhibit A.

All oil production will be sold from the Cypress 33-1 Battery via a LACT unit. Gas production gathered at each facility location will be sent through a volume transfer meter at the facility location. All gas production will then be sent to DCP for further processing.

All production measured at each battery will be allocated back to the individual wells delivering to that battery based on periodic well tests.

November 8, 2013

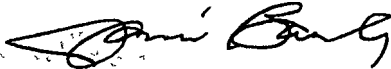

Page 2

The operator shall notify the transporter of this commingling authority.
