Oil & Gas Metering:

The production from all wells will flow to the Warren McKee Unit Central Tank Battery. The Warren McKee wells will flow through a 6' x 15' production separator, and the production from the M J Raley and Fred Turner Jr. wells will flow through a 10' x 20' production heater treater. The oil will flow to three tanks and then will be sold through a LACT meter (S/N 195214) and sent down a Holly EP sales pipeline.

Gas from the Warren McKee wells is sent from the production separator to Targa sales meter (S/N 118500123). Gas from the M J Raley and Fred Turner Jr. wells is sent from the production separator to Targa sales meter (S/N 1181123).

All water will be sent to three water tanks on location and pumped to Warren McKee #1 SWD.

All wells have been on production for at least 10 years and are in Range 3 of decline. The wells can be reasonably expected to have a decline rate of less than 5 percent, as specified in Hearing Order R-14299. Therefore, wells will be tested at least once per month for a minimum of 24 hours through a 4' x 10' three-phase test separator with turbine meters for oil (S/N 366527), water (S/N 396241) and an orifice meter for gas (S/N 314513).

The oil and gas meters will be calibrated on a regular basis per API and OCD specifications. The OCD will be notified of any future changes to the facility.

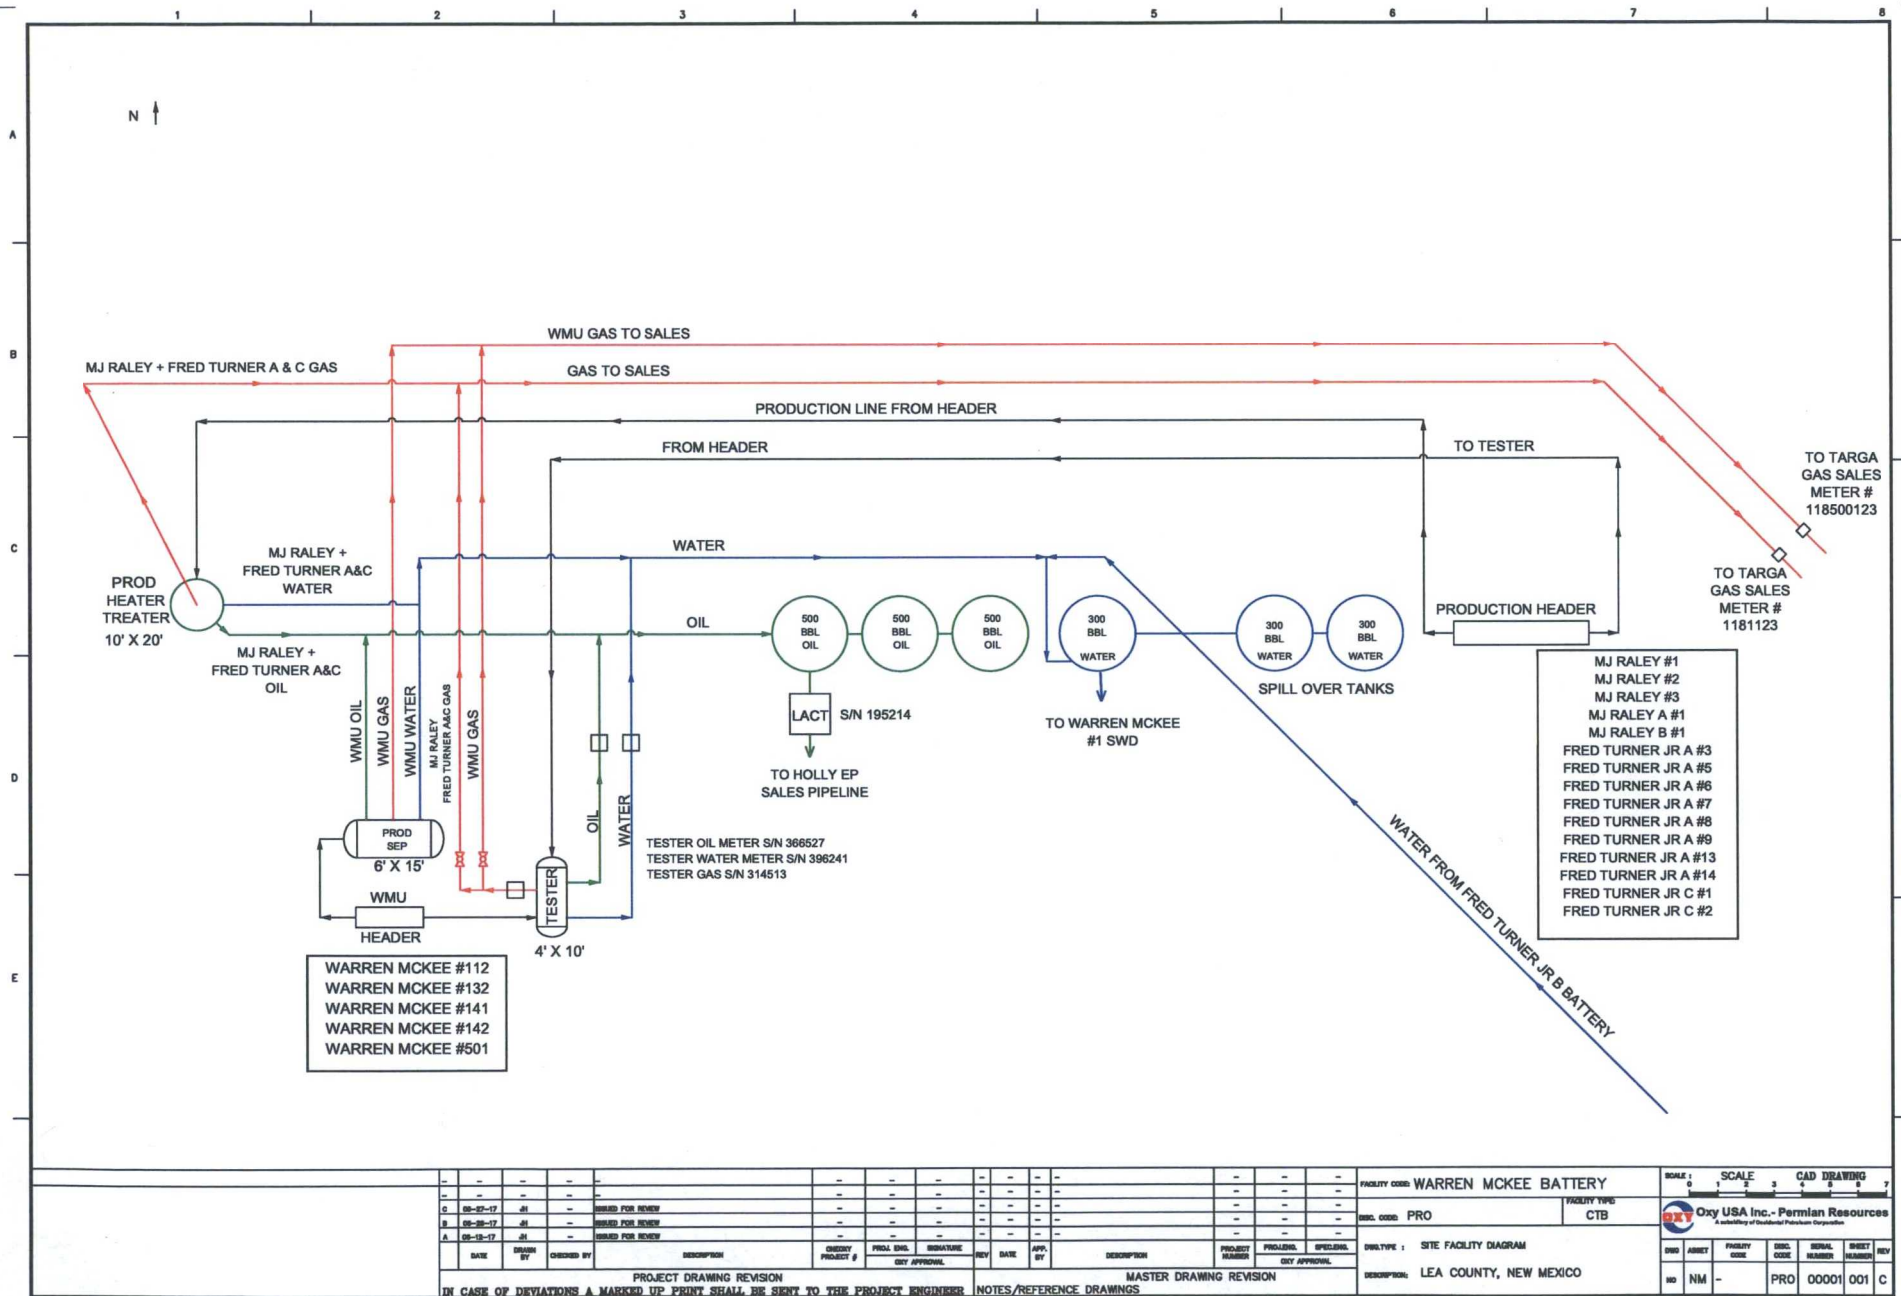

Process and Flow Descriptions:

The flow of production is shown in detail on the enclosed facility diagram. Also enclosed is a map showing the locations of wells and facilities. The commingling of this production is the most effective means of producing the reserves and will reduce the surface facility footprint.

OXY USA WTP LP understands the requested approval will not constitute the granting of any right-of-way or construction rights not granted by the lease instrument. These applications will be submitted separately for approval per NMOCD regulations.

Pursuant to Statewide rule 19.15.12.10(C)(4)(g) OXY USA WTP LP requests the option to include additional pools or leases within the defined parameters set forth in the order for future additions.

The working interest, royalty interest and overriding royalty interest owners have been notified of this proposal by certified mail (see attached).

Just in case the geologist finds some upside potential and we want to work on the well rather than P&A, I'd like to keep it in the application. Thanks for asking.

I see that the Warren McKee Well No. 112 API 30-025-07796 Has 0 BOPD and 0 MCFPGD.
Do you still want this well to be included in the application?

Thanks
Mike

Subject: Warren McKee Unit Commingle Permit PLC-142 Amendment

Hello Mike,
Attached is the application to amend commingling order PLC-142 due to modifications at the batteries.

Please note:

- 1). Warren McKee Unit #112 (API 30-025-07796) is being evaluated for P&A.
- 2). Many of the wells were drilled in the 1950's. 9 of 20 total wells in the package did not have C-102 forms in NMOCD online well files. I included C-101 or C-128 forms as substitutes.
- 3). 7 of 264 owners had unknown addresses. The affidavit of newspaper publication of commingle notice is included. The tracking numbers for notification to all other owners are also included. The notifications were placed in the mail today.
- 4). The application will be sent to you by Fedex today.

Please let me know if you require additional information or have any questions.

Thanks,
Sandra Musallam
