

ABOVE THIS LINE FOR DIVISION USE ONLY

NEW MEXICO OIL CONSERVATION DIVISION
 - Engineering Bureau -
 1220 South St. Francis Drive, Santa Fe, NM 87505

ADMINISTRATIVE APPLICATION CHECKLIST

THIS CHECKLIST IS MANDATORY FOR ALL ADMINISTRATIVE APPLICATIONS FOR EXCEPTIONS TO DIVISION RULES AND REGULATIONS WHICH REQUIRE PROCESSING AT THE DIVISION LEVEL IN SANTA FE

Application Acronyms:

- [NSL-Non-Standard Location] [NSP-Non-Standard Proration Unit] [SD-Simultaneous Dedication]**
[DHC-Downhole Commingling] [CTB-Lease Commingling] [PLC-Pool/Lease Commingling]
[PC-Pool Commingling] [OLS - Off-Lease Storage] [OLM-Off-Lease Measurement]
[WFX-Waterflood Expansion] [PMX-Pressure Maintenance Expansion]
[SWD-Salt Water Disposal] [IPI-Injection Pressure Increase]
[EOR-Qualified Enhanced Oil Recovery Certification] [PPR-Positive Production Response]

[1] **TYPE OF APPLICATION** - Check Those Which Apply for [A]

- [A] Location - Spacing Unit - Simultaneous Dedication
 NSL NSP SD

Check One Only for [B] or [C]

- [B] Commingling - Storage - Measurement
 DHC CTB PLC PC OLS OLM

- [C] Injection - Disposal - Pressure Increase - Enhanced Oil Recovery
 WFX PMX SWD IPI EOR PPR

- [D] Other: Specify _____

[2] **NOTIFICATION REQUIRED TO:** - Check Those Which Apply, or Does Not Apply

- [A] Working, Royalty or Overriding Royalty Interest Owners
 [B] Offset Operators, Leaseholders or Surface Owner
 [C] Application is One Which Requires Published Legal Notice
 [D] Notification and/or Concurrent Approval by BLM or SLO
U.S. Bureau of Land Management - Commissioner of Public Lands, State Land Office
 [E] For all of the above, Proof of Notification or Publication is Attached, and/or,
 [F] Waivers are Attached

2007 APR 27 AM 10:57

[3] **SUBMIT ACCURATE AND COMPLETE INFORMATION REQUIRED TO PROCESS THE TYPE OF APPLICATION INDICATED ABOVE.**

[4] **CERTIFICATION:** I hereby certify that the information submitted with this application for administrative approval is **accurate** and **complete** to the best of my knowledge. I also understand that **no action** will be taken on this application until the required information and notifications are submitted to the Division.

Note: Statement must be completed by an individual with managerial and/or supervisory capacity.

Patsy Clugston Print or Type Name	 Signature	Regulatory Specialist Title	4/25/07 Date

APPLICATION FOR AUTHORIZATION TO INJECT

- I. PURPOSE: _____ Secondary Recovery _____ Pressure Maintenance XX Disposal _____ Storage
Application qualifies for administrative approval? _____ Yes _____ No
- II. OPERATOR: Burlington Resources Oil & Gas, LP
ADDRESS: 3401 East 30th Street, Farmington, NM 87402
CONTACT PARTY: Patsy Clugston PHONE: 505-326-9518
- III. WELL DATA: Complete the data required on the reverse side of this form for each well proposed for injection.
Additional sheets may be attached if necessary.
- IV. Is this an expansion of an existing project? _____ Yes XX No
If yes, give the Division order number authorizing the project: _____
- V. Attach a map that identifies all wells and leases within two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.
- VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion, and a schematic of any plugged well illustrating all plugging detail.
- VII. Attach data on the proposed operation, including:
1. Proposed average and maximum daily rate and volume of fluids to be injected;
 2. Whether the system is open or closed;
 3. Proposed average and maximum injection pressure;
 4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than reinjected produced water; and,
 5. If injection is for disposal purposes into a zone not productive of oil or gas at or within one mile of the proposed well, attach a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).
- *VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geologic name, thickness, and depth. Give the geologic name, and depth to bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval.
- IX. Describe the proposed stimulation program, if any.
- *X. Attach appropriate logging and test data on the well. (If well logs have been filed with the Division, they need not be resubmitted).
- *XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken.
- XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water.
- XIII. Applicants must complete the "Proof of Notice" section on the reverse side of this form.
- XIV. Certification: I hereby certify that the information submitted with this application is true and correct to the best of my knowledge and belief.
- NAME: Patsy Clugston TITLE: Regulatory Specialist
SIGNATURE:  DATE: 4/24/07
E-MAIL ADDRESS: clugspl@conocophillips.com
- * If the information required under Sections VI, VIII, X, and XI above has been previously submitted, it need not be resubmitted.
Please show the date and circumstances of the earlier submittal: _____

III. WELL DATA

A. The following well data must be submitted for each injection well covered by this application. The data must be both in tabular and schematic form and shall include:

- (1) Lease name; Well No.; Location by Section, Township and Range; and footage location within the section.
- (2) Each casing string used with its size, setting depth, sacks of cement used, hole size, top of cement, and how such top was determined.
- (3) A description of the tubing to be used including its size, lining material, and setting depth.
- (4) The name, model, and setting depth of the packer used or a description of any other seal system or assembly used.

Division District Offices have supplies of Well Data Sheets which may be used or which may be used as models for this purpose. Applicants for several identical wells may submit a "typical data sheet" rather than submitting the data for each well.

B. The following must be submitted for each injection well covered by this application. All items must be addressed for the initial well. Responses for additional wells need be shown only when different. Information shown on schematics need not be repeated.

- (1) The name of the injection formation and, if applicable, the field or pool name.
- (2) The injection interval and whether it is perforated or open-hole.
- (3) State if the well was drilled for injection or, if not, the original purpose of the well.
- (4) Give the depths of any other perforated intervals and detail on the sacks of cement or bridge plugs used to seal off such perforations.
- (5) Give the depth to and the name of the next higher and next lower oil or gas zone in the area of the well, if any.

XIV. PROOF OF NOTICE

All applicants must furnish proof that a copy of the application has been furnished, by certified or registered mail, to the owner of the surface of the land on which the well is to be located and to each leasehold operator within one-half mile of the well location.

Where an application is subject to administrative approval, a proof of publication must be submitted. Such proof shall consist of a copy of the legal advertisement which was published in the county in which the well is located. The contents of such advertisement must include:

- (1) The name, address, phone number, and contact party for the applicant;
- (2) The intended purpose of the injection well; with the exact location of single wells or the Section, Township, and Range location of multiple wells;
- (3) The formation name and depth with expected maximum injection rates and pressures; and,
- (4) A notation that interested parties must file objections or requests for hearing with the Oil Conservation Division, 1220 South St. Francis Dr., Santa Fe, New Mexico 87505, within 15 days.

NO ACTION WILL BE TAKEN ON THE APPLICATION UNTIL PROPER PROOF OF NOTICE HAS BEEN SUBMITTED.

NOTICE: Surface owners or offset operators must file any objections or requests for hearing of administrative applications within 15 days from the date this application was mailed to them.

BURLINGTON

RESOURCES Oil & Gas, LP

Application for Authorization to Inject

Vasaly Com #2 SWD

~~Unit #1 (SENE) 1450' PNL & 1190' FEL~~

Section ~~16~~, T30N, R11W

San Juan County, New Mexico

I. Purpose is water disposal

II. Operator: Burlington Resources Oil & Gas, LP

Operator phone Number: (505) 326-9700

Operator address: 3401 East 30th Street

Farmington, New Mexico 87402

Contact: Patsy Clugston, Regulatory Specialist

Phone: (505) 326-9518

III. A. (1) Lease: FEE - Kratzke, Leonard C, ET AL

Lease Size: 40 Acres

Lease Area: T30N, R11W, Sec. 22 NWNE

Closest Least Line: ~120 feet

Well Name and Number: Vasaly Com #2

Well Location: ~~Unit #1 (SENE) 1450' PNL & 1190' FEL~~

~~Section 16~~, T30N, R12W - See Exhibit A (plat)

A. (2) Surface Casing - 13-3/8", 68#, J-55 BTC casing set @ 390' with a 17-1/2" hole. Cemented with 700 SX (Class H Premium w/2% Bentonite, (833cf) Circ. 60 bbls cement to surface. PT casing to 1900 #/30 min. OK.

Intermediate Casing - 9-5/8", 47#, L-80 LT&C casing set @ 6994' w/DV tool @ 3829' with a 13-1/2" hole. Cemented 1st stage with 1570 sx Class H 50/50 POZ w/25gel, 0.25#/sx Flocele, 5#/sx Gilsonite, 0.4% Halad-344, 0.15% HR-5, 0.2% CFR-3 (1994 cf). Circ. 50 bbls cement to surface. 2nd Stage - cemented w/1340 sx Class B 65/35 POZ w/6% gel, 0.25#/sx Flocele, 5#/sx Gilsonite (2412 cf). Circ. 50 bbls cement to surface. PT casing to 4800#/30 min. OK.

Production Casing - 7", 26#, P-110- LT&C casing & set @ 13085' w/DV tool @ 11473' w/liner top set @ 6498' with 9-5/8" hole. Cemented - 1st stage with 500 sx Class H 50/50 POZ wq/0.5% Halad-413, 0.4% HR-5, 0.2% HR-25, 35% SSA-1, 0.2% Super CBL, 0.2% Suspent HT (725 cf). 2nd stage cemented w/900 sx Class B 50/50 blended Silicalite w/6% Bentonite, 0.5#/sx Flocele, 5#/sx Gilsonite, 0.4% Halad-344, 0.2% HR-5, 6#/sx Lime - 2349 cf. Log indicated no cement to top of liner. Squeezed liner top @ 6498' w/250 sx Class G 50/50 POZ w/2% gel, 0.4% HALad-344, 0.2% CFR-3, 0.2% Super CBL, 0.1% HR-5 (318 cf). Tailed w/150 sx Class H 50/50 POZ w/2% gel, 0.4% Halad-344, 0.2% Super CBL, 0.3% Versa-set (191 cf).

Production casing - from 6507' to surface - cemented w/825 sx Class H 50/50 POZ w/0.5% Halad-344, 0.15% HR-5, 0.2% CFR-3, 2% gel, 0.2% Suspent HT (1039 cf). Circ 10 bbls cement to surface.

- A. (3) **Tubing** will be 4-1/2", 10.5# J-55 IPC injection string. It is set @ 7430' (disposal interval @ 7524' - 7868').
- A. (4) **Packer** - Haliburton - 7", 23-32# BWS Permanent packer w/W-4" seal bore Packer has been set @ 7430' 94' above the top perforation.
- B. (1) **Disposal zone** will be Morrison Bluff Entrada. Fracture gradient is expected to be a normal 0.64 psi per foot.
- B. (2) **Disposal interval** will be 7524' - 7868'. Upper Entrada was perforated w/ .47" holes @ 3 spf from 7784' - 7868' (84' w/252 holes. Bluff was perforated w/.40" holes @ 2 spf from 7524' - 7650' (126' w/252 holes).
- B. (3) **The original purpose** of this well was to test deep Pennsylvanian potential.
- B (4) Alkali Gulch, Akah, Lwr Ismay were plugged and abandoned in April 2000. Lower Akali Gulch perms from 12685' - 12699'; CIPB set @ 12500' with TOC @ 12440' - Pumped 2.3 bbls Class H cement w/.3% HR-5, 0.15% GR-25. Akah perms from 12136' - 12217'; CIBP set @ 12090' - TOC @ 12030' pumped 2.3 bbls Class H cement w/3% HR-5, 0.15% HR-25. Lwr Ismay perms from 11844' - 11883'; CIBP @ 11800' TOC 11688' - cemented w/4.3 bbls Class H cement w/0.3% HR-5, 0.15% HR-25.

Morrison - Since cement from original completion only reached 8000' behind 7" casing was squeezed before Morrison was completed. 26 bbls 50/50 Class H POZ. Then squeezed w/120 sx Class H cement w/2% CaCl. Morrison completed, not productive. Perfs from 7018' - 7028'. Temporarily plugged back w/CIBP set @ 6985' & pumped 15 sx Cement on CIBP. TOC @ 6934'. Then 1/2007 D/O CIBP @ 6985', set 7" CIPB @ 8950' and plugged back Morrison perms w/698 sx 50/50 POZ (881 cf) and then perf'd and tested the Upper Entrada and Bluff for injection capabilities, which we are now submitted the permit for.

- B (5) The depth of the Dakota, next higher gas or oil zone in the area 6682' - 6925'. The top of the Lower Ismay, the next lower gas or oil zone in the area is 11844' and is plugged back (see B (4) above.

IV. Is this an expansion of an existing project? _____ YES XX NO
If yes, give the Division order number authorizing the Project: _____ N/A _____

V. Attach a map that identifies all wells and leases with two miles of any proposed injection well with a one-half mile radius circle drawn around each proposed injection well. This circle identifies the well's area of review.

See Attached A1 (wells) & A2 (leases)

VI. Attach a tabulation of data on all wells of public record within the area of review which penetrate the proposed injection zone. Such data shall include a description of each well's type, construction, date drilled, location, depth, record of completion and a schematic of any plugged well illustrating all plugged detail.

See Attachment B1 (spreadsheet) & B2 (completion reports)

- VII. Attach data on the proposed operation, including: (see Attachment C (analysis for injection fluid).
1. Proposed average and maximum daily rate and volume of fluids to be injected: 4000 bpd average, 7000 bpd maximum
 2. Whether the system is open or closed: The system will be closed. Will utilize tanks for water storage and the water will be piped to the facility.
 3. Proposed average and maximum injection pressure: 1000psi at the surface will be the average pressure, the maximum injection pressure will be 1690 psi at the surface with equates to approx. 5023 psi bottomhole pressure.
 4. Sources and an appropriate analysis of injection fluid and compatibility with the receiving formation if other than re-injected produced water:
 5. If injection is for disposal purposes into a zone not productive of oil or gas within one mile of the proposed well, attached a chemical analysis of the disposal zone formation water (may be measured or inferred from existing literature, studies, nearby wells, etc.).

Water analysis for the Entrada was not available from the current well. However, the following tabulation gives dissolved solids on several wells which penetrate the Entrada formation. In addition, information obtained from the document Hydrology and Water Resources of San Juan Basin, New Mexico, Hydrology Report #6, New Mexico Bureau of Mines and Minerals, 1983 also reports generally water from the Entrada formation is not suitable for drinking in the area of the proposed well.

Well Name and Number	Location	Date Tested	TDS
Filon #21-1 Federal	SW, 21-20-5	8-20-76	10,726
Dome#20-1 Santa Fe	NE 20-21-8	2-10-77	11, 114

- VIII. Attach appropriate geologic data on the injection zone including appropriate lithologic detail, geological name, thickness and depth. Give the geologic name, and depth to the bottom of all underground sources of drinking water (aquifers containing waters with total dissolved solids concentrations of 10,000 mg/l or less) overlying the proposed injection zone as well as any such sources known to be immediately underlying the injection interval (**see Attachment D**).
- IX. Describe the stimulation program, if any: We received permission from the Aztec NMOCD office to first test this well for injectivity, therefore the well has been stimulated as follows:
- Perforated Upper Entrada interval @ 3 spf - .47" holes - 7784' - 7868'. Frac'd Upper Entrada w/33,000# 20/40 sand & 218,000# 16/30 sand w/2960 bbls gel.
- Perforated Bluff interval @ 2 spf - .40" holes from 7524' - 7650 w/126' w/252 holes. Frac'd Bluff w/2200 bbls 30# Linear & 26,000# 20/40 sand & 174,000# 16/30 sand.
- X. Attach appropriate logging and test data on the well. (if well logs have been filed with the Division, they need not be resubmitted) (**see Attachment E**).
- XI. Attach a chemical analysis of fresh water from two or more fresh water wells (if available and producing) within one mile of any injection or disposal well showing location of wells and dates samples were taken) (**see Attachment F**).
- XII. Applicants for disposal wells must make an affirmative statement that they have examined available geologic and engineering data and find no evidence of open faults or any other hydrologic connection between the disposal zone and any underground sources of drinking water (**see Attachment G**).
- XIII. PROOF of NOTICE (**see Attachment H** - newspaper affidavit of publication and **Attachment I** - interested party certified mailing proof)
- XIV. Additional Information. **Attachment J** - Approved sundry from NMOCD where we converted the Vasaly Com #2 - TA'd well to a SWD which is now ready to take produced water. **Attachment K** - completion report for the Morrison Bluff Entrada.
- XV. Additional Information. **Attachment L** - Current wellbore schematic.

INJECTION WELL DATA SHEET

Tubing Size 4-1/2", 10.5# J-55 IPC Lining Material: _____

Type of Packer: Haliburton - 7" 23-32# BWS Permanent Packer

Packer Setting Depth: 7430'

Other Type of Tubing/Casing Seal (if applicable): W-4" seal bore

Additional Data

1. Is this a new well drilled for injection? Yes XX No _____

If no, for what purpose was the well originally drilled? Originally drilled to test the Pennsylvania

Oil / gas production

2. Name of the Injection Formation: Bluff and Entrada

3. Name of Field or Pool (if applicable): Morrison Bluff Entrada

4. Has the well ever been perforated in any other zone(s)? List all such perforated intervals and give plugging detail, i.e. sacks of cement or plug(s) used. _____

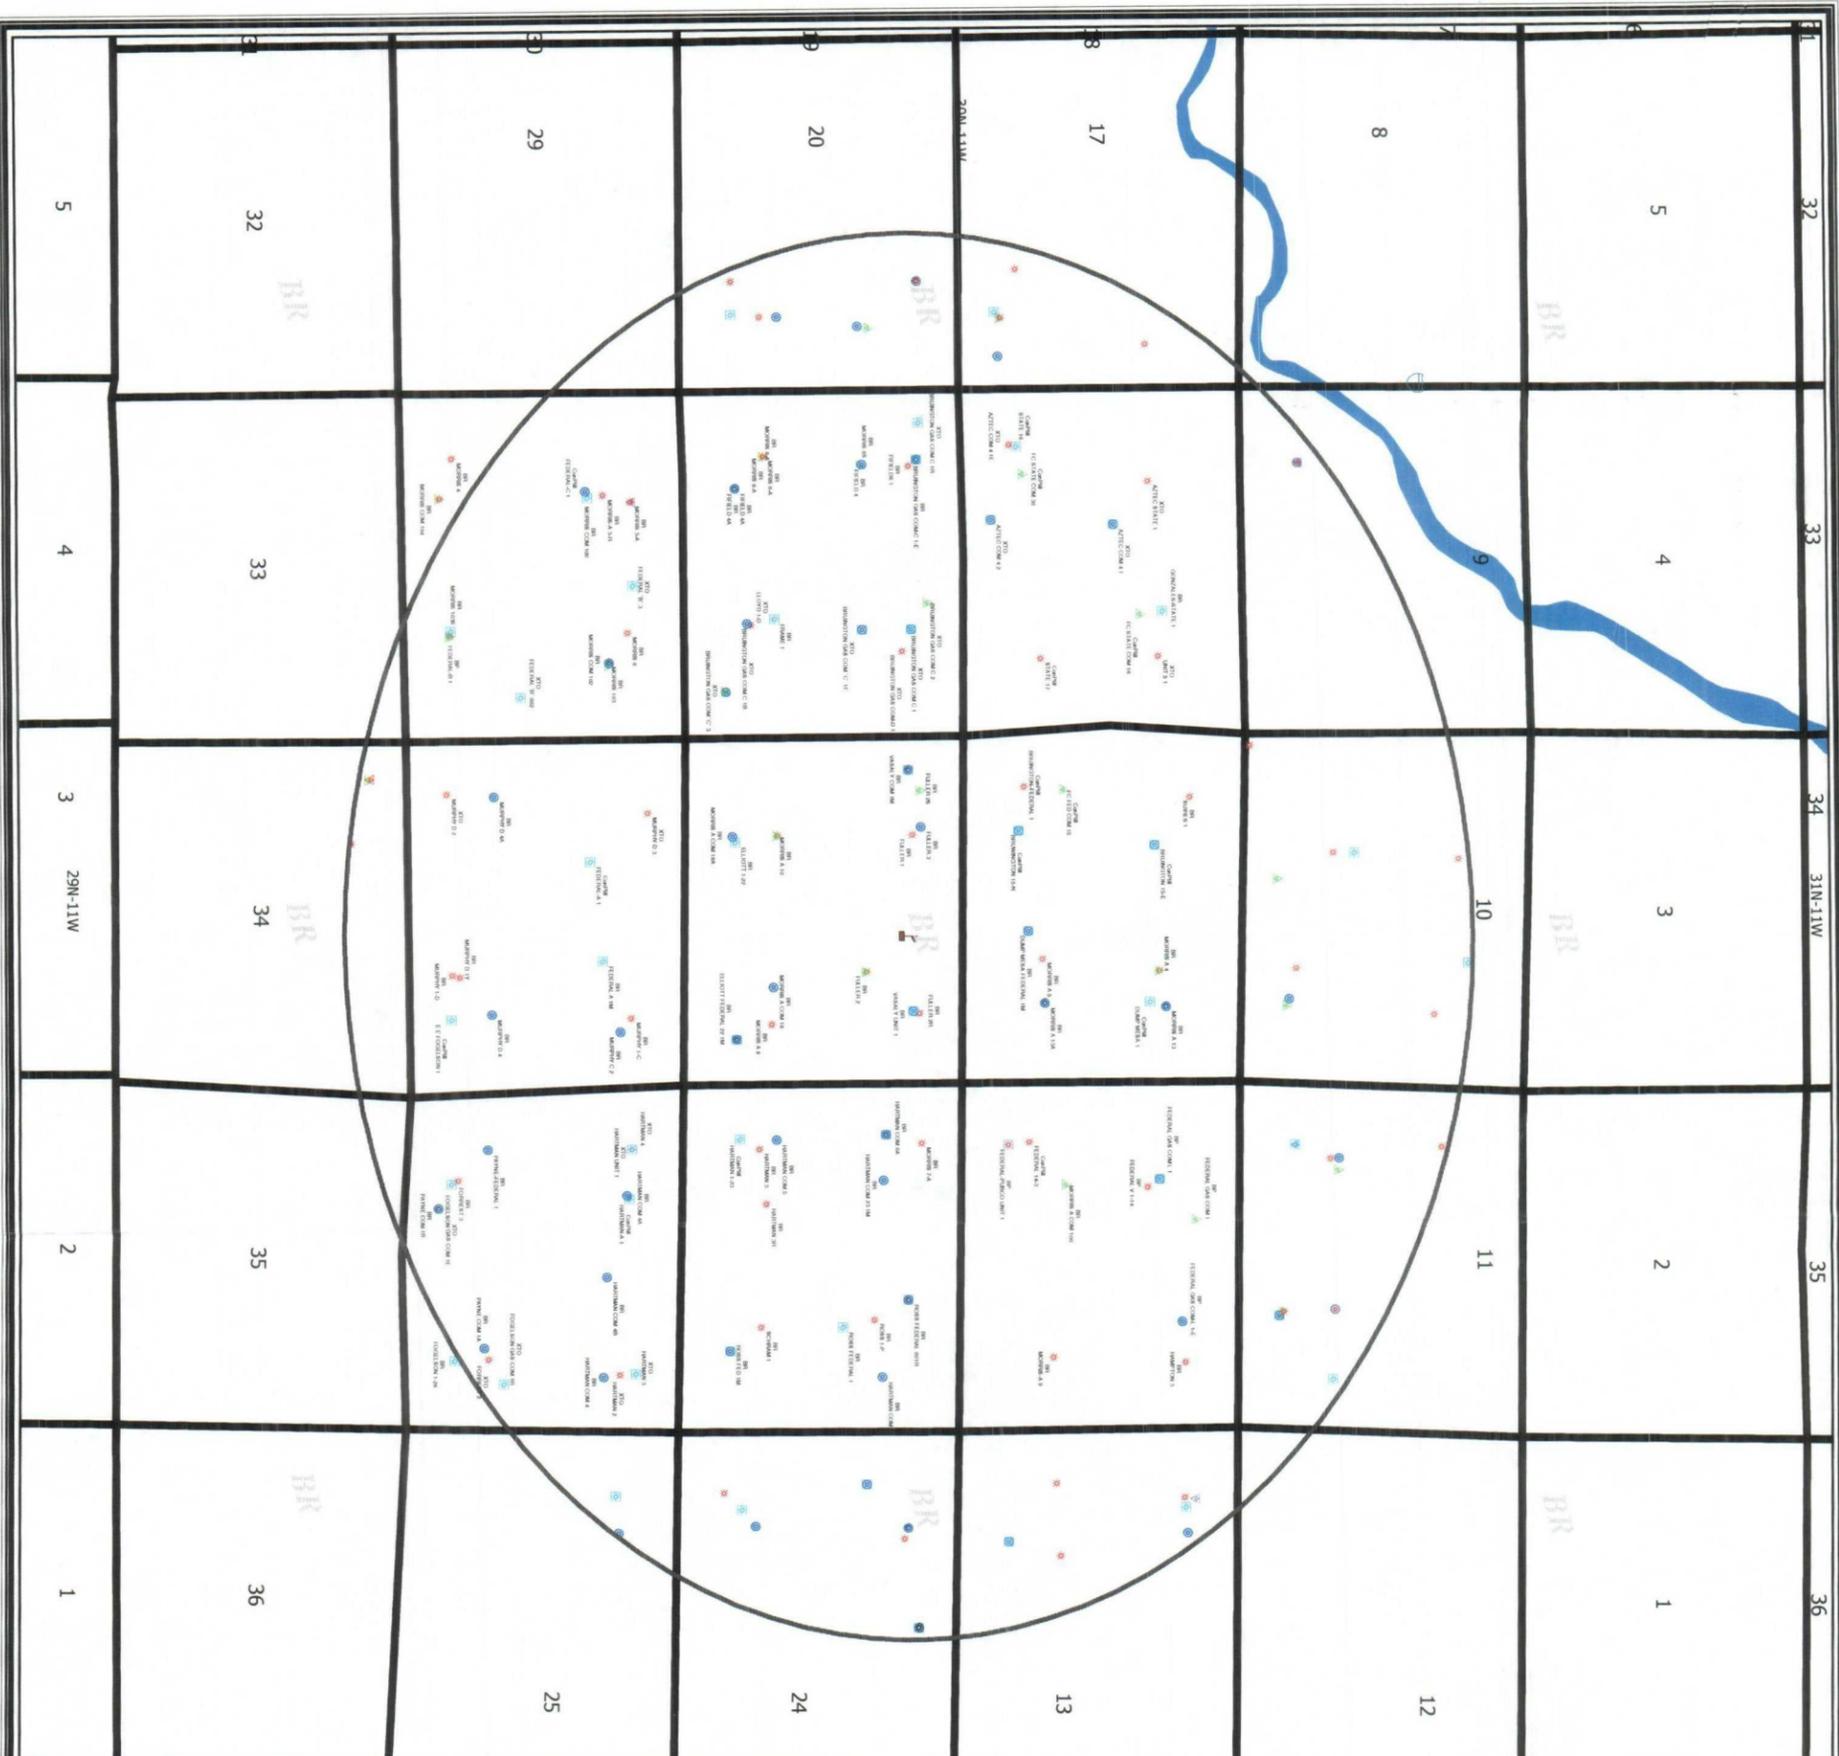

See attached

5. Give the name and depths of any oil or gas zones underlying or overlying the proposed injection zone in this area: Kirtland - 1,010' - 2,001'; Fruitland - 2,001' - 2,271'; Pictured Cliffs

2,271' - 2,418'; Cliffhouse - 4,000' - 4,135'; Menefee - 4,135' - 4,588'; Pt Lookout - 4,588' - 4,726'

Gallup - 5,938' - 6,572'; Dakota - 6,682' - 6,925'; Lwr Ismay - 11,844' - 11, 883'; Akai - 12,136'

- 12,217'; Alkali Gulch - 12,685' - 12,699'

Review

Attachment D

Regarding the question about the depth of the base of potable water; a search of the water database on the website of the New Mexico State Engineer Office returned results indicating that the deepest water well within 50,000' of the Vasaly Com #2 is 300' deep and had a water column of 200'. Most wells in the area are less than 100' deep because they are near the Animas River and therefore water is encountered at shallow depths. The water is produced from undifferentiated Tertiary sandstone and Quaternary river gravel. Based on the above information, we can use a depth of 300' as the base of potable water. The surface casing of the Vasaly Com #2 is set at 390' which is more than adequate to protect the fresh water sands.

ATTACHMENT F

According to the State Engineers Office there was only one water well registered in the area of interest. This water well belonged to Carl Bannowsky. We went and visited Mr. Bannowsky and were told that the well never good and was plugged, therefore there are no water wells in the area of interest. The City of Aztec provides water to the residence in the area. See Attachment F2 (Map showing the plugged water well in reference to the Vasaly Com #2).

Aztec, NM; Scale: 1" = 0.261Mi 421M; 1,380Ft, 1 Mi = 3.826", 1 cm 166M

Attachment F2

ATTACHMENT G

Regarding the evidence of open fractures/faults that could connect the disposal zone to the fresh water sands; the disposal zone (Bluff - Entrada) lies below 5 separate producing formations each of which had adequate seal to trap gas, thus we can conclude indirectly that no such open fracture exists or the gas would have escaped to the surface.

Notice
Burlington Resources Oil & Gas, LP (a subsidiary of ConocoPhillips) is applying to complete the Vasaly Com #2 SWD as a water disposal well. The Vasaly Com #2 is located at 1200' FNL & 2390' FEL, Sec. 22, T30N, R11W, San Juan County, NM. The well will dispose of water produced from oil and gas wells into the Entrada and Bluff sandstone at a depth of 7524' - 7868' at a maximum rate of 7000 bpd maximum bbls of water per day and at a maximum pressure of 5023 psi. Interested parties must file objection or requests for hearing with NM Oil Conservation Division, 1220 South St. Francis Drive, Santa Fe, NM 87505 within 15 days. Additional information can be obtained by contacting Patsy Clugston, Burlington Resources, 3401 East 30th Street, Farmington, NM 87402. Phone number is (505) 326-9518.

Angelene Frazzin Trust
 151 Quail Run
 Aztec, NM 87410

Dear Angelene Frazzin Trust,

As required by New Mexico Oil Conservation Division rules, I am notifying you of the following proposed water disposal well. The letter is a notice only. No action is needed unless you have questions or objections.

Burlington Resources Oil & Gas, LP is applying (see attached application) to recomplete the Vasaly Com #2 into a water disposal well.

Well Name: Vasaly Com #2 TD is 13275' with PBD @ 8950'
Proposed Disposal Zone: Entrada - 7784' - 7868; and Bluff - 7524' - 7650'; both are intervals of the Morrison Bluff Entrada Pool (pool code - 96162).
Location: Unit B (NWNE), 1200' FNL & 2390' FEL, Sec. 22, T30N, R11, San Juan Co., NM
Approx. location: approx. 2-1/2 miles south of Aztec, New Mexico
Applicant: Burlington Resources Oil & Gas, LP (505) 326-9700
Applicant's Address: 3401 E. 30th Street, Farmington, NM 87402

Submittal Information: Application for a water disposal well will be filed with the NM Oil Conservation Division. If they determine the application complies with the applicable regulations, then it will be approved. The New Mexico Oil Conservation Division address is 1220 South St. Francis Drive, Santa Fe, NM 87505. Their phone number is (505) 476-3440.

Please call me at (505) 326-9518 if you have any questions.

Respectfully,

Patsy Clugst

Laurie Wattenburger
12450 Darkwood Rd
San Diego, CA 92129

Dear Laurie Wattenburger,

As required by New Mexico Oil Conservation Division rules, I am notifying you of the following proposed water disposal well. The letter is a notice only. No action is needed unless you have questions or objections.

Burlington Resources Oil & Gas, LP is applying (see attached application) to recomplete the Vasaly Com #2 into a water disposal well.

Well Name: Vasaly Com #2 TD is 13275' with PBD @ 8950'
Proposed Disposal Zone: Entrada - 7784' - 7868; and Bluff - 7524' - 7650'; both are intervals of the Morrison Bluff Entrada Pool (pool code - 96162).
Location: Unit B (NWNE), 1200' FNL & 2390' FEL, Sec. 22, T30N, R11, San Juan Co., NM
Approx. location: approx. 2-1/2 miles south of Aztec, New Mexico
Applicant: Burlington Resources Oil & Gas, LP (505) 326-9700
Applicant's Address: 3401 E. 30th Street, Farmington, NM 87402

Submittal Information: Application for a water disposal well will be filed with the NM Oil Conservation Division. If they determine the application complies with the applicable regulations, then it will be approved. The New Mexico Oil Conservation Division address is 1220 South St. Francis Drive, Santa Fe, NM 87505. Their phone number is (505) 476-3440.

Please call me at (505) 326-9518 if you have any questions.

Respectfully,

Thanks Will,

I did have an answer to your second question also. The leaseholder for the all of the area of interest is BR and COPC. Thanks again. Patsy

Patsy:

Thanks for the quick turnaround on this!

Barring any protest in the next few days - I will release this to Mark on Monday.

Tell Erick "thank you" also for the analysis and answers - you have some real engineers there at ConocoPhillipsBurlington or whatever you are calling the merged company.

Regarding the Step Rate Test run:

What is the size of the workstring used to run the test?

The step rate test was done through 2-7/8" tubing N-80. The gauges were hung below the perforated sub on the bottom of the string placed directly below the bottom perf.

Regarding the Step Rate Test run:

What is the size of the workstring used to run the test?

The step rate test was done through 2-7/8" tubing N-80. The gauges were hung below the perforated sub on the bottom of the string placed directly below the bottom perf.

The plot sent with the application shows a break of approximately 5000 psi. Is this surface pressure or bottom hole pressure as I am assuming?

Bottom-hole pressure, which was acquired with bottom hole gauges on the string.

What was the ISIP after the test?

Approximately 5000 psi

Did your engineers analyze the falloff portion after the test? If so, what results did they get?

Fall off analysis was done on the two injections intervals prior to the stimulations along with the step rate analysis comparing surface pressure readings and bottom pressure data. Attached is that analysis.

Based on this test, which maximum surface injection pressure limit do you request?

1600 psi @ 17.8 BPM

~1600= 5023psi - (.433 psi/ft * 7868 ft) (calculation excludes frictional effects which are minimal with rates and size of injection string)

Hi Erick,

5/9/2007

We need your help to answer all the parts of question #3 below. The NMOCD is working on the application as we speak and it would be nice if you could put a priority on getting me the answers we need as soon as possible. They don't like to review everything and have to wait for something that doesn't come for a while and then have to review everything all over again when all the information comes in. Call me if you have questions. Thanks.
Patsy

Hello Patsy:

After reviewing your application on behalf of COP/Burlington, I have the following questions:

- 1) Is the entire 1/2 mile area of review within the Morrison-Bluff-Dakota leased by Burlington/ConocoPhillips? Due to the numerous notices sent out, can we assume that there is acreage that is not leased? Rule 701.B(2) is the new notice rule. Have you had any protests?
- 2) Is Mr. Kratzke the surface owner of the well site and the tank battery? Was he noticed?
- 3) Regarding the Step Rate Test run:
 - What is the size of the workstring used to run the test?
 - The plot sent with the application shows a break of approximately 5000 psi. Is this surface pressure or bottom hole pressure as I am assuming?
 - What was the ISIP after the test?
 - Did your engineers analyze the falloff portion after the test? If so, what results did they get?
 - Based on this test, which maximum surface injection pressure limit do you request?

Thank You,

Formation Testing Summary on the Vasaly SWD #2

Erick Estrada

Summary

Since very little data is available on the formation characteristics of the Bluff and Entrada intervals, injection testing was performed in conjunction with the completion of the injection well. The testing was also done to possibly show regulatory in the future from having to perform the step rate test.

From the pressure falloff analysis, permeability and frac gradient could be estimated. This was used in conjunction with the results on the step rate test to verify that numbers can be attained either by surface or bottom-hole pressures. The matching frac gradients show that since the injection is performed using a simple incompressible fluid (water), bottom-hole gauges are not necessary to acquire a fracture pressure. These results can be presented in the future to get away from performing a step rate test, resulting in cost savings.

Future work that could be done is building a tank model using the attained permeability to predict at what rate the formation would reach the frac pressure. This work would then be tested to match the step rate. The result of this work would predict the deliverability of the injection well without having to perform an injection test (step-rate test).

Nolte-Smith Plot Entrada Frac 7784' - 7868'

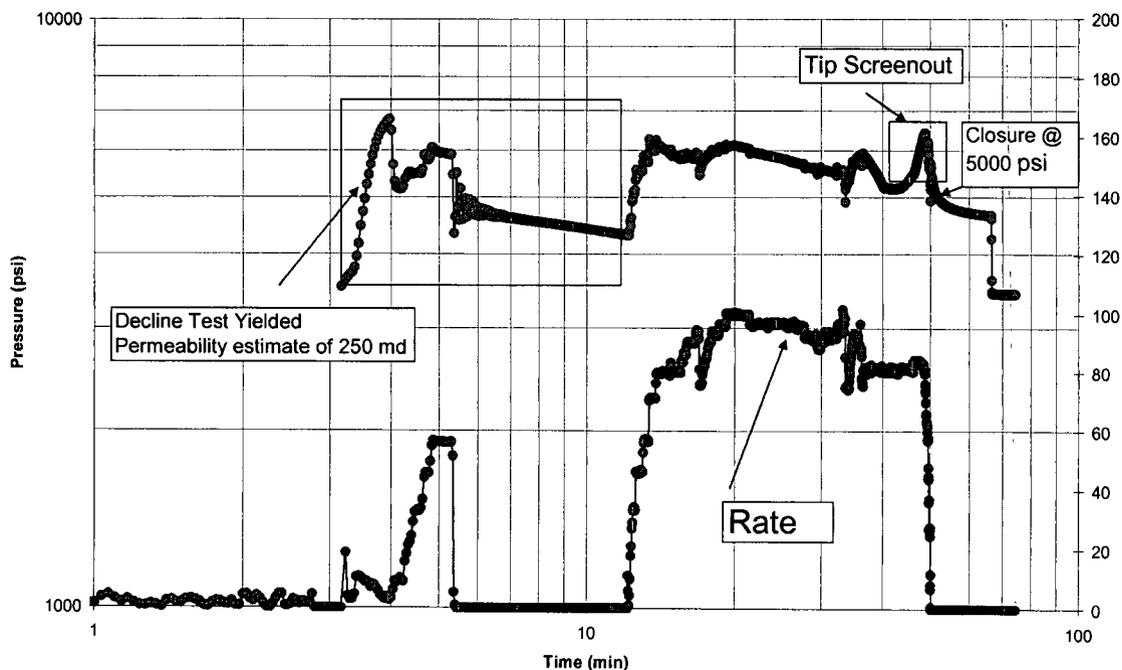

Figure 1 shows the minifrac testing as well as the treatment data on the frac. Calculated frac gradient is 0.64 psi/ft. Decline analysis yielded a permeability of approximately 250 md.

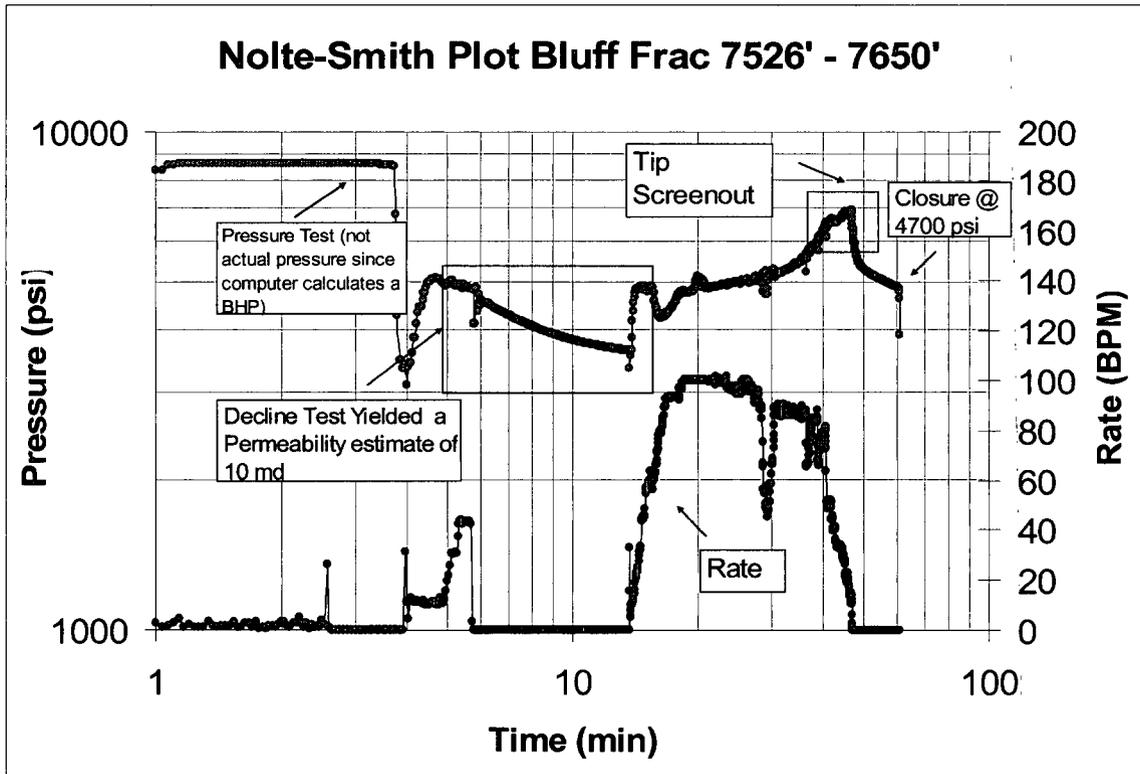

Figure 2 showing minifrac testing on Bluff as well as the treatment data on the frac. Calculated frac gradient is 0.62 psi/ft. Decline analysis yielded a permeability of 10 md

Time	Pres	PRate
8316.22	3521.60	0.00
8316.22	3521.60	0.00
12346.81	3567.55	1.00
13230.50	3636.81	2.00
14115.60	3725.85	3.00
15034.04	3894.47	5.30
15912.77	4123.55	7.30
16929.79	4390.70	10.00
17837.59	4769.10	15.00
18739.72	5091.19	20.00
19300.00	5359.31	25.00
19593.62	5443.69	26.00

Rate Variable:

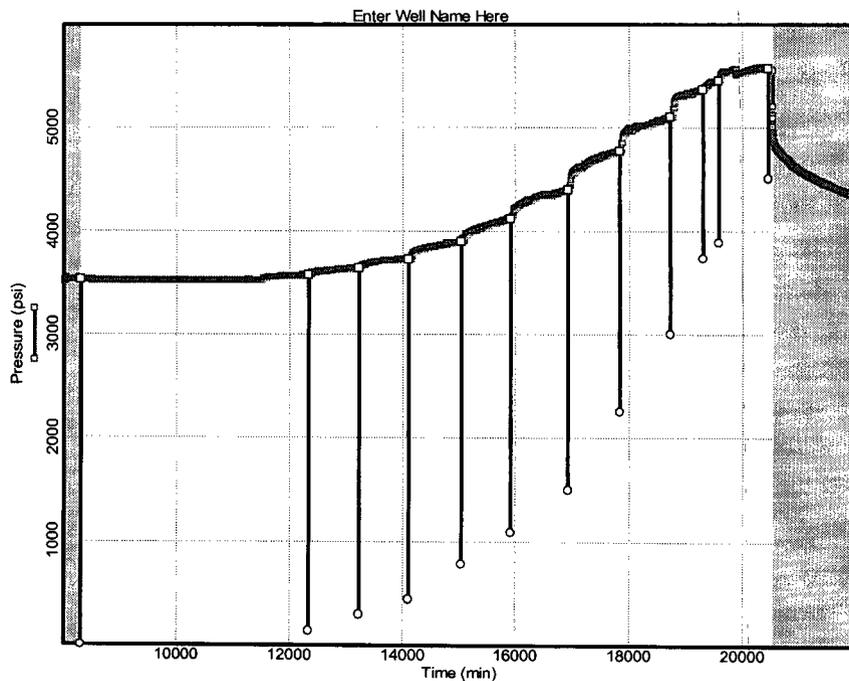

Figure 3 shows the Step Rate test data (Pressure is from bottom-hole pressure gauges)

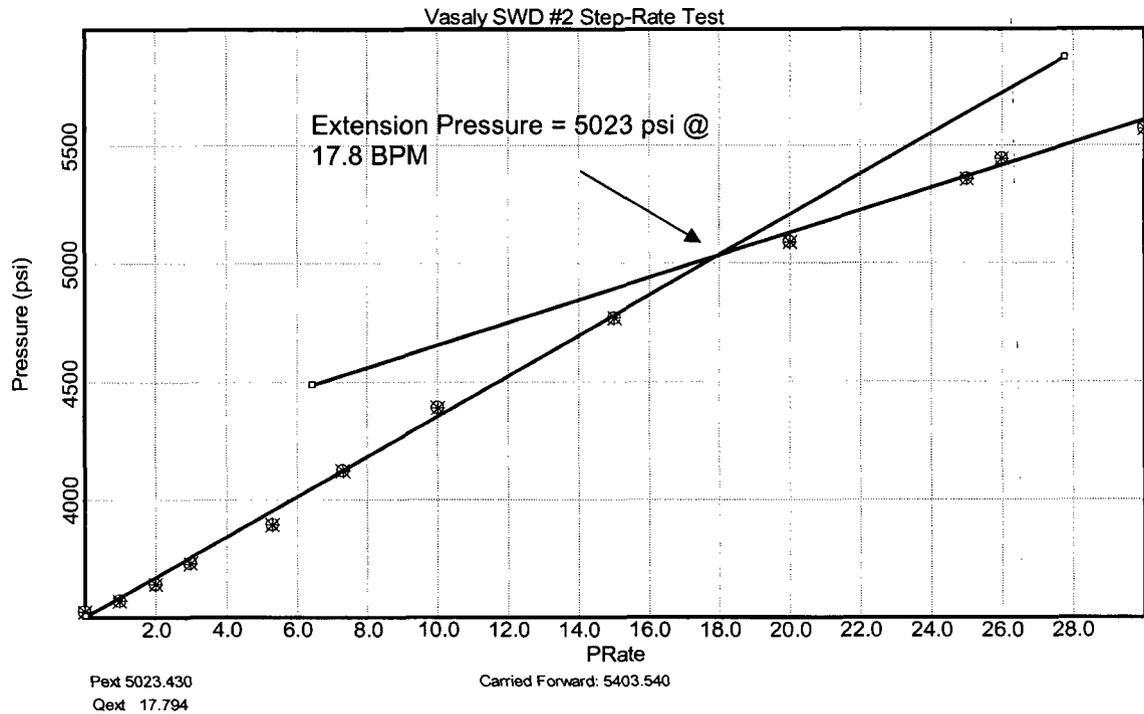

Figure 4 shows the resulting plot of pressure versus rate. The resulting intersection gives extension pressure which was 5023 psi. The resulting frac gradient is 0.64 psi/ft as verified from decline analysis

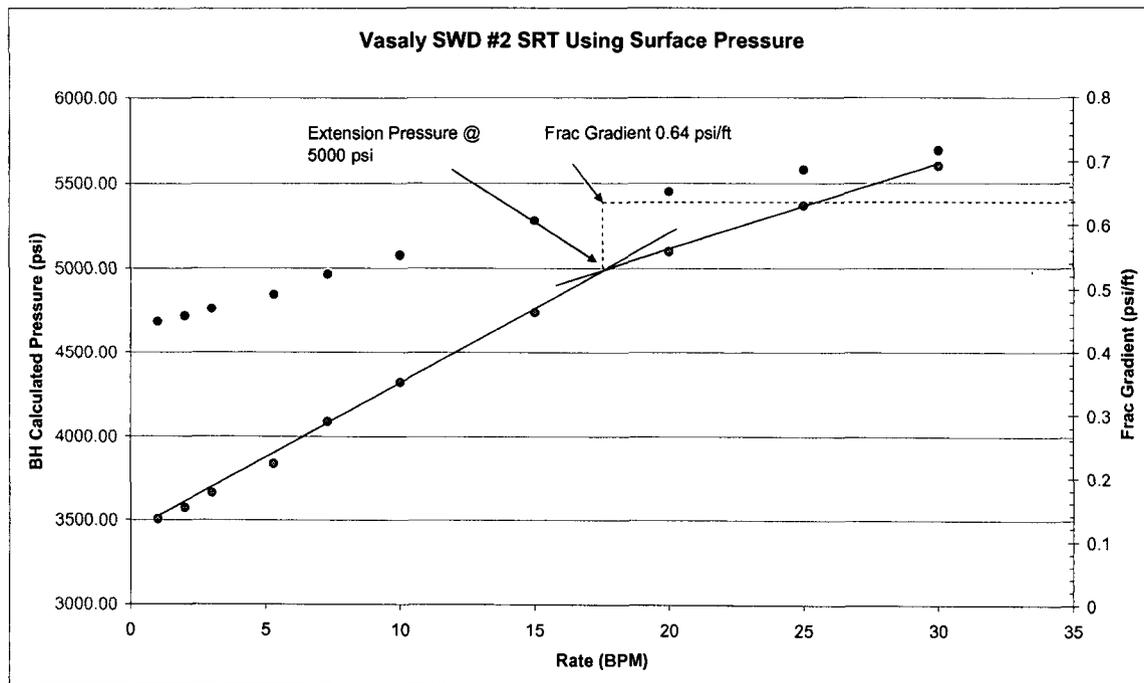

Figure 5 showed the step-rate test using pressure readings from surface. As can be seen the frac gradient is 0.64 psi/ft and the extension pressure is 5000 psi. Red dots are calculated bottom-hole pressure and blue is a calculated frac gradient pertaining to that pressure.

I just found out that we purchased the property that the well is on from Mr. Martinez and that all the documentation shows that the land will be used for oil and gas activity. He is aware of what the well will be used for, it just that the paperwork doesn't say the well will be used to as a disposal well for produced water. We were wondering if we could get him to sign a waiver for the 20 day period so that you could proceed with the approval. He has known about the project for months now and our agent is sure they can get a waiver sign fairly quickly.

Hello Patsy:
He was supposed to get a copy of the injection application.

I just need something for the file that shows he was noticed that saltwater from multiple wells and pools would be injected into a well on his land.

If the SOA has language to this effect that he recently signed off on, then send a copy and I can run this by David Brooks on Monday.

I'll have to answer you in stages on these questions.

1. I will find out about the 1/2 area of review being leased by COPC. There were numerous notices sent out because the tank battery and the well are approx. 2 miles apart so the notices had to go to all affected landowners. We had lots of calls where we had to explain what was going on, but I have not heard of any protests. I was assuming that the any protests would be addressed directly to the NMOCD since the phone number and address for the NMOCD were given in our letter.

2. The Surface owner for the tank battery is ConocoPhillips and the surface owner for the well is Ray Martinez. Mr. Kratzke was not identified by our land department as needing a notice, therefore no notice was sent to him.

3. Regarding the Step Rate Test. I will find out this information for you and get back with you on this.

I will try to find out the answers to questions 1 & 3 for you today, if my contacts are here to help me out. Thanks for your patience. Patsy
