Section 27, T-14S, R-27E
Chaves County, NM
Proration Acreage
S $\frac{1}{2}$ Section 27

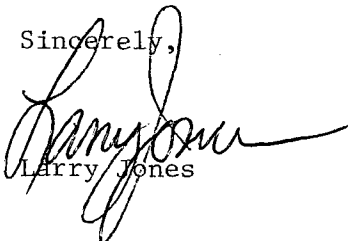

Dear Mr. Stamets:

The above well was originally drilled to the Devonian Formation with a standard location, 660' FSL and 660' FEL; and it was then plugged on October 21, 1952. On May 20, 1984, we reentered this well and completed it in the San Andres Formation.

This letter application is to seek approval to further clean out this well to an approximate depth of 8400', and test the Pennsylvanian Sands which will make this location non standard according to the New Mexico State Oil Conservation Division's Rules and Regulations. Therefore, we are hereby seeking approval under New Mexico Oil Conservation Rule 104F.

Enclosed please find a copy of the plat, lease ownership, etc., outlining the prorated acreage. We certify that we have mailed all operators and lease owners, offsetting the requested prorated acreage, a copy of this application by certified mail.

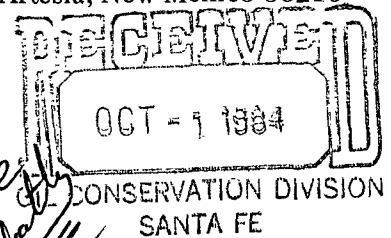

Sincerely,

Larry Jones
