Re: Request for Administrative approval for non-standard Dakota Location

Rosa Unit #166B API # 30-039-29841 NE4 Sec. 30, T31N, R5W 2,305' FNL & 2,305' FEL

Dear Mr. Fesmire:

Williams Production Co., LLC, is requesting administrative approval to construct the Rosa Unit #166B as a dual Mesaverde/Dakota with the Dakota being non-standard. Section 30, T31N, R5W was established as a non-standard spacing unit by Order No. R-2046-B dated July 18, 2007. Pursuant to Order No. R-10987-B(2), spacing requirements allow for up to 4 Dakota wells in a standard GPU and they shall be located not closer than 660 feet to the outer boundary of the GPU and not closer than 10 feet to any interior quarter or quarter-quarter section line or subdivision inner boundary. Given these requirements, this location is non-standard to the south by 335 feet.

Williams has already been issued an APD for drilling a standard infill Mesaverde well by the BLM. A copy of the front page of the APD is enclosed for your review.

Williams intends to make the well a dual well thereby capturing the reserves from the Dakota with a single well bore. By itself the Dakota in this area is at best very marginal economically and a dual completion helps capture additional reserves from the Dakota that otherwise would not be able to be economically developed. Utilizing a single well bore for a dual completion would also negate the need for additional disturbance of another wellpad, road, and pipeline.

Mark E. Fesmire August 6, 2007 Page 2 of 2

The surface location was picked by considering drainage patterns from the offset Mesaverde wells. In particular, the drainage patterns we are trying to avoid are from the Rosa Unit #166 in the northeast of 30, the Rosa Unit #162B in the southeast of 30, the Rosa Unit #162A in the southeast of 30, the Rosa Unit #166A in the northwest of 30, the Rosa Unit #162 in the southwest of 30 and the Rosa Unit #159 in the southeast of 19. See drainage map.

As the Unit Operator of the Rosa Unit, Williams Production is the only offset operator, thereby this proposed non-standard location would not affect any other operators.

The offset unit's working interest and mineral owners to the east are common with the subject unit therefore there are no "affected persons."

Enclosed for your reference are copies of the Participating Area maps for the Mesaverde and Dakota Formations. All of section 30 is in the PA for the Mesaverde. Section 30 is not in the PA in the Dakota formation.

The spacing unit for the Mesaverde is the north half and the other Mesaverde wells in the spacing unit are the Rosa Unit #166 and #166A.

The spacing unit for the Dakota is the north half and there are no other Dakota wells in the spacing unit.

Should you have any questions or concerns, please don't hesitate to contact me at the phone numbers listed above. You can also contact Vern Hansen at our Tulsa office at (918) 573-6169.

Sincerely,

Heather Riley

Regulatory Specialist

Subject: NSL Application - Williams - Rosa Unit No. 166B

Ms. Riley

There is not sufficient with this application to determine if notices are required.

Specifically, the application does not state whether or not working interest ownership is identical between the N/2 and the S/2 of Section 30. This does not matter as to the Mesa Verde, since the entire section is in the PA, but it is an issue for the Dakota.

Please advise if the WI ownership is identical throughout Section 30. If not, please notify the WI owners in the S/2 30, and furnish proof of notice.

Thanks

David K. Brooks Legal Examiner

Heather,

BP is the Working Interest Owner of all of Section 30. As to the Minerals they are all Federal. The Ownership is common throughout.

Will you forward this on to Mr. Brooks?

Thanks, Vern
