Describe Cause of Problem and Remedial Action Taken.*

On Tuesday September 18, 2007 at 09:15 am a leak was discovered on a 2" buried steel flowline from the EVGSAU well #2271-001 due to external corrosion. The flowline leak was found by a COPC employee. Chloride concentration is 53,000 for this lease.

Describe Area Affected and Cleanup Action Taken.*

The spill was not contained and affected approximately 760 sq/ft of road and pasture. The MSO shut in the well and called for a vacuum truck to pick up the free liquids. The well is still shut in until the bad section of flowline can be replaced. The area will be delineated and remediated in accordance with NMOCD guidelines

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
