Re: T-24-S, R-29-E
Section 7: N/2
Eddy County, New Mexico

TO THE ATTACHED LIST
OF OFFSET OPERATORS

Gentlemen:

I am representing Collins & Ware, Inc. of Midland, Texas.

Collins & Ware, Inc. propose to drill an Atoka test to be located 660 FNL and 1980 FWL of Section 7, T-24-S, R-29-E, Eddy County, New Mexico, immediately.

Upon staking the above location the BLM inspector in Carlsbad, New Mexico, disapproved the 660 FNL and 1980 FWL location as it falls in the Harroun Lake (attached plat of lake and approved location).

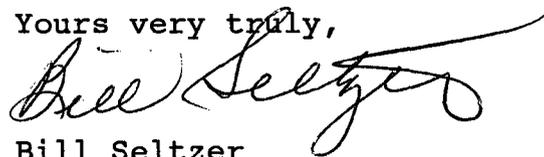

The BLM advised they would approve a location of 200 FNL and 1980 FWL of Section 7. This location is an unorthodox location and we must have approval of the Oil Conservation Division, Santa Fe, New Mexico.

We are requesting the OCD, State of New Mexico, for an administrative approval of an unorthodox gas well, location to be located 200 FNL and 1980 FWL of Section 7, T-24-S, R-29-E.

We request each of you to execute the attached Waiver and return same in the enclosed envelop.

Your immediate attention will be appreciated.

Yours very truly,

Bill Seltzer

*RE: Unorthodox Gas Well Location Application
Fort "7" Well No. 1, 534' FNL - 1414' FWL (Unit C)
Section 7, T-24-S, R-29-E, NMPM, Malaga Atoka
Gas Pool, Eddy County, New Mexico.*

Dear Mr. Seltzer:

In reviewing the subject applications, it would appear that there exist drillable locations in NE/4 of said Section 7, your filing did not adequately cover the possibility of drilling in the corresponding quarter section. Also, your application failed to address the possibility of drilling directionally to a standard bottom-hole location in the NW/4 of the section.

Should geological reasons be a factor in this unorthodox location, please submit additional data pursuant to Division General Rule 104.F.III.

I have attached a copy of NMOCD Memorandum 1-90 dated March 21, 1990 which outlines the procedures for administrative approval of unorthodox locations.

Should you have any questions, please contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Michael E. Stogner", written over a horizontal line.

MICHAEL E. STOGNER

No. 1-90

MEMORANDUM

TO: All Operators

FROM: William J. LeMay, Director *WJL*

SUBJECT: Administrative Applications for Unorthodox Locations

DATE: March 21, 1990

Division Memorandum No. 3-89, dated March 24, 1989, advised the industry that the OCD would no longer automatically approve unopposed unorthodox location applications. Unorthodox locations can be approved administratively in accordance with the Rules and Regulations or applicable special pool rules if surface conditions truly prevent the use of a legal location and if directional drilling to a legal location is not feasible.

Topographic conditions which will be considered to justify an unorthodox location include such traditional factors as terrain features (steep slopes, arroyos, etc.) which make drilling impractical. In addition, approval may be given to avoid archeological sites which may not be disturbed without substantial mitigation, incompatible surface uses such as buildings, recreation areas, etc. Applications should fully document the reason an unorthodox location is required.

The attached guidelines state the minimum information which should be submitted with applications for administrative approval of unorthodox locations. Failure to provide the necessary information will probably result in processing delays.

If the surface of the proration unit or proposed drill site is controlled by a Federal Surface Management Agency, a copy of the application must be sent to the appropriate agency office.

If there are legal locations within the proration unit which are drillable, but the operator chooses not to drill those locations for geological reasons the application cannot be approved administratively and a hearing will be required.

NEW MEXICO OIL CONSERVATION DIVISION

**SUBMITTAL GUIDELINES FOR ADMINISTRATIVE APPROVAL
OF NON-STANDARD LOCATION APPLICATIONS**

- I. If the well is located on Federal or Indian Lands, the Federal Surface Management Agency must be notified and an on-site inspection conducted prior to filing the application. If an Application for Permit to drill or a Notice of Staking has been prepared, a copy must be submitted.
- II. Completed C-102 showing the well location, proration unit, leases within the unit and other required information.
- III. Land plat showing offset operators and working interest owners and any offsetting wells producing from the same pool or formation.
 - A. This information may be shown on the topo map if it does not impair the readability of the map.
 - B. The operator should certify that the information is current and correct.
- IV. Original or clear copy of topographic map, preferably 7.5 minute quad, showing contours and other mapped features impacting the location, with the following information marked thereon (In order to be able to adequately show all of the necessary surface conditions it may be necessary to enlarge the relevant portion of the topo map to provide room for detail):
 - A. The proposed well location and proration unit;
 - B. An outline of the orthodox drilling windows as provided in the applicable rules for the subject application;
 - C. The location of any wells to any formation within the area of the proration unit and a statement as to whether an existing pad can be used to drill the proposed well;
- V. An enlargement of the topo map showing the subject area with the applicable additional information:
 - A. Terrain features not shown on the map which make an orthodox location unusable;
 - B. Proposed access roads and pipelines if they affect the location selection;
 - C. The location of any surface uses which prevent use of a legal location;

- D. The location of any archeological sites identified in the archeological survey;
 - E. The location and nature of any other surface conditions which prevent the use of an orthodox location.
- VI. If archeological sites are a reason for the unorthodox location request, a copy of the archeological survey, or a summary, identifying sites which cannot be disturbed or which must have any disturbance mitigated. In addition, the location of such areas should be marked on the enlarged topo so they can be clearly identified.
- VII. A narrative report of any on-site inspection of the potential locations. If such on-site has resulted in elimination of legal locations due to surface conditions, such information should also be noted on the enlarged topo.
- VIII. A statement of why directional drilling to reach a legal bottom-hole location is not feasible.
- IX. An affidavit that notice has been sent to all parties entitled thereto, under the Divisions Rules and Regulations with return receipt cards showing date of receipt of notice.
