NATURE OF RELEASE

Type of Release	Sweet Crude Oil	Volume of Release	75 bbls.	Volume Recovered	60 bbls.
Source of Release:	At the Crossroads-Texas State line, on the 8" crude oil gathering line into Gladiola.	Date and Hour of Occurrence	01/18/08	Date and Hour of Discovery	01/18/08 at 2:30 pm
Was Immediate Notice Given?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom?	Chris Williams		
By Whom?	Becky Moore	Date and Hour	01/19/08 at 10 am		
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse			

RECEIVED

If a Watercourse was Impacted, Describe Fully.*

JAN 25 2008

Describe Cause of Problem and Remedial Action Taken.*

Internal corrosion caused a leak at the Crossroads-Texas State Line System on the 8" Gathering Line into Gladiola. Emergency Action response included stopping the source of the leak with a temporary clamp; also trucks were immediately called in to vacuum the oil. A third party remediation company was called in to assist with emergency response and for assistance in remediation and clean up efforts. The area was contained until an emergency one call was cleared with the State of NM on 8/22/08 (due to state office closure during holiday). Excavation of the contaminated soil was being completed on 8/23/08. Affected soil was brought to the surface and staged on plastic at the site. Samples from the bottom of the excavation and from the stock piles were taken 8/23/08 for lab analysis to ensure NM State clean up levels are met.

Describe Area Affected and Cleanup Action Taken.*

Area affected at the source of the leak is apx. 40' x 50' and apx. 10' in depth. Also an area of apx. 250' in length along the pipeline ROW and 12" deep were affected. Estimated 1200 Cu. Yds. of contaminated soil is currently being hauled offsite to Gandy Landfill West of Tatum. At the request of the landowner clean soil will be used from the Landowner's orchard which is within proximity of the affected site. The pipeline is being replaced with 300' of new pipeline from the source of the corrosion. A final C-141 will be submitted and accompanied with a final report including lab analysis, pictures, and all associated closure documentation as required.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
