Re: Key Energy Services, Inc.
State S Brine Station

Dear Mr. Price:

Enclosed you will find documentation of the reseed activities at the State S Brine Station. I have included a copy of the C-141 form for your convenience along with the invoices from B&H Maintenance & Construction for the work at this site.

If you have any questions, please let me know.

Sincerely,

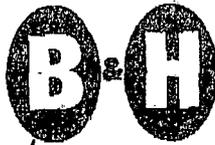

A handwritten signature in black ink that reads "Ed D. Philley".

NATURE OF RELEASE

Type of Release	Brine	Volume of Release	300bbbls	Volume Recovered	275bbbls
Source of Release	Load line valve left open by unidentified 3 rd party driver.	Date and Hour of Occurrence	11/24/07 09:00	Date and Hour of Discovery	11/24/07 09:00, Clarence Fyfe (Chevron)
Was Immediate Notice Given?	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> Not Required	If YES, To Whom?	Pat Richards, OCD		
By Whom?	Edward (Ted) Philley, Key Energy Services	Date and Hour	11/26/07 10:25		
Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
Brine valve was left open at load line at east end of water station by 3rd party, line drained into diked area. Dike gave way and ran down lease road onto Chevron well location.

Describe Area Affected and Cleanup Action Taken.*
Affected lease road, Chevron State S #1 Unit D, Sec15-T21S-R37E well site and area surrounding. Recovered 275bbbls with vacuum trucks. Terracon removed and disposed of 1762 cubic yards of brine affected soils on behalf of Key Energy Services. Excavated areas were backfilled with landowner provided top soil (1,010 cubic yards) and landowner provided caliche (300 cubic yards) to repair affected roads. Remedial actions documented in Terracon report dated February 20, 2008 (Attached). Disturbed topsoil will be reseeded at the landowner's direction with a landowner selected seed mix.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

3 miles north of Eunice, NM off County Road 207**

Terracon Project Number A4077179

1.0 INTRODUCTION

The Key Energy Services, Inc. State "S" Brine Station release site is located approximately three miles north of Eunice, New Mexico on Lea County Road 207. The release occurred on November 24, 2007. An initial New Mexico Oil Conservation Division (NMOCD) Form C-141 was completed and filed with the Hobbs, New Mexico NMOCD office on November 26, 2007 by Key personnel. The site is located on property owned by the Deck Estate.

An estimated 300 barrel release of brine water occurred at the station and flowed north-easterly along a lease road and pasture land. Vacuum trucks were utilized to remove an estimated 275 barrels of brine water from the road and pasture land. The cause of the spill was reported to Pat Richards at the NMOCD on November 26, 2007 as a brine loading valve left open by a third-party driver. The brine water release flowed east to northeast and impacted approximately 1,000 linear feet of the surface and subsurface soils with chlorides.

1.1 Site Description

Site Name	State "S" Brine Station
Site Location	NW/4, NW/4, Section 15, T21S, R37E, Unit Letter D Eunice, Lea County, New Mexico
General Site Description	The area of concern is a caliche pad on the north side of the brine station. The impacted area extends down a caliche road and through pasture land. The surrounding area is an active oil field.

A topographic map (Figure 1) and a site map (Figure 2) are included in Appendix A.

1.2 Scope of Services

The proposed scope of work was to provide remedial efforts to satisfy the NMOCD requirements.

The scope of work of the remedial efforts included:

- Excavation of the chloride-impacted soils near the surface (0-5 feet bgs) above the NMOCD approved cleanup level of <3,000 milligrams per kilogram (mg/kg);
- Subdivision of the impacted area into individual sampling areas and collection of confirmation samples to determine adherence to approved cleanup standards for chlorides of less than 3,000 mg/kg. Based on laboratory results, additional excavation, as needed, of areas exceeding 3,000 mg/kg chlorides was performed;
- The disposal of excavated soil at an approved landfill under manifest; and
- Backfill and site restoration of the excavation using backfill soil and caliche subsequent to compaction.

1.3 Regulatory Framework

As previously stated to Terracon by Mr. Wayne Price – NMOCD, Santa Fe, NM, there are no current published cleanup standards for chloride affected soils in the State of New Mexico. Mr. Price further stated that soils with elevated concentrations (in the general range of 1,000 to 3,000 mg/kg) could be left in place. Such efforts would be acceptable in the state of New Mexico to provide groundwater protection and remediate the site to the satisfaction of the NMOCD. This cleanup standard was used at this site for remediation that occurred on January 26, 2006.

The web site for the New Mexico Office of the State Engineer was utilized to research the average depth to groundwater in Lea County, T21S, R37E, Sections 9, 10, 11, 14, 15, 16, 21, 22, and 23. There is no recordable groundwater for section 15. The nearest recordable groundwater appears to be in excess of one mile away, to the west (Section 16) and south, (Sections 22 and 23) ranging from 53 to 70 feet bgs in depth. A visual search of the area showed no surface water or wells within a ½ mile radius of the site.

2.0 FIELD ACTIVITIES

2.1 Site Investigation and Spill Response

In an effort to minimize migration of brine impact to the environment, the decision was made to excavate all visually brine impacted areas in the flow path prior to the initial investigative soil sampling. RWI, Inc. of Hobbs, NM completed a utility notification (One-Call) for excavation and subsequent excavation of the brine impacted soil commenced on December 5, 2007. The visually impacted migration pathway of the spill (approximately two to 30 feet in width) through the pasture land was excavated to depths ranging from 18-inches to 8-feet below ground surface (bgs). Brine impacted soil along the lease road was excavated to depths ranging from 18 to 36 inches bgs. A total of 1,762 cubic yards of brine impacted soil was excavated and transported to Sundance Disposal in Lea County NM.

A total of 19 initial conformation soil samples collected. Five additional soil samples were collected in areas where chloride concentrations exceeded 3,000 mg/kg following additional excavation. Excavation activities were considered complete when chloride concentrations in confirmation samples were below 3,000 mg/kg. Soil samples collected from the excavated areas were delivered under chain-of-custody to Environmental Lab of Texas, a Xenco Laboratories Company, for analysis of chlorides using EPA Method 300.0. A site map showing sample locations is included in the Appendix A.

2.2 Soil Excavation

During the site investigation, the visually brine-impacted soil in the pastureland was initially excavated to a depth of approximately 18-inches to 48-inches below ground surface (bgs). These areas are noted as sample points PS-1 through PS-11 on the site map. Based on the laboratory results from the site investigation samples collected at these depths, excavation of brine-impacted soil continued down to the caliche layer, with terminus depths from approximately 55 inches bgs. Confirmation samples were collected and submitted for analysis of chlorides using EPA method 300.0. Based on the laboratory results, excavation of brine impacted soil continued in the area of sample points PS-2 and PS-7 to a terminus depth of approximately five feet bgs in the sample point of PS-2 and approximately eight feet bgs (total) in sample point area PS-7. Confirmation samples were collected and submitted for analysis of chlorides and based on the laboratory results excavation of the pasture land soils was terminated.

During the site investigation, the visually brine-impacted road base material was excavated to a depth of approximately 18 to 24 inches bgs. These areas are noted as sample points RD-1 through RD-5 on the site map. Based on the laboratory results from site investigation samples collected at these depths, further excavation of the brine impacted road base material in areas RD-1 and RD-3

continued to terminus depths from approximately 24 inches to 36 inches bgs. Confirmation samples were collected and submitted for analysis of chlorides. Based on the laboratory results excavation of the road base materials was terminated.

During the site investigation, the brine impacted caliche pad, associated with the Brine Station, was excavated to a depth of approximately 18 to 36 inches bgs. These areas are noted as sample points CP-1 through CP-3 on the site map. Based on the laboratory results from site investigation samples collected at these depths, further excavation of the brine impacted caliche pad material in the sampling area of CP-1 continued to terminus depths from approximately 36 inches to 48 inches bgs. Confirmation samples were collected and submitted for analysis of chlorides and based on the laboratory results excavation of the caliche pad materials was terminated.

2.3 Soil Remediation

The excavated topsoil from the pasture land, the road base material, and the caliche soil were transported to Sundance Disposal facility in Lea County, NM for disposition. A documented 1,762 cubic yards of soil were transported to the disposal facility using 12- and 14-cubic yard dump trucks from or subcontracted under RWI, Inc. The waste disposal receipts from Sundance Disposal are included in Appendix D: Regulatory Documents/Landfill Disposal Documentation.

2.4 Soil Sampling

Terracon's soil sampling program included the collection of 24 soil samples from the brine impacted area. The soil samples were analyzed for chlorides using EPA method 300.0.

The soil samples collected were placed in laboratory prepared glassware and placed on ice in a cooler. The samples and completed chain-of-custody form was relinquished to Environmental Lab of Texas, a Xenco Laboratories Company, in Odessa, Texas for analysis. Chain-of-custody forms and laboratory data sheets are provided in Appendix B. Soil sampling equipment was decontaminated between sampling locations using an Alconox® wash and a fresh water rinse.

2.5 Site Restoration

The topsoil, road base material, and the caliche soil used for backfill and site restoration activities, were obtained from the landowner, Deck Estate. This material was transported to the site using dump trucks, spread in four to six inch lifts, and compacted using heavy equipment and water. The excavated areas in the pasture land was restored, as near as possible, to the natural grade of the surrounding landscape. The road base material was leveled and compacted in six inch lifts and slightly rounded to provide adequate migration of surface waters during precipitation events.

**Closure Compliance Report
State "S" Brine Station
Eunice, Lea County, New Mexico
Terracon Project #A4077179
February 20, 2008**

Approximately 1,010 cubic yards of topsoil and 300 cubic yards of caliche were used for site restoration.

Photographs documenting the remediation activities and final site restoration are included in Appendix C.

3.0 DATA EVALUATION

Confirmation soil samples of the impacted areas were collected during the excavation activities until the target cleanup level of less than 3,000 mg/kg chlorides had been achieved. The laboratory results indicate final chloride concentrations in the pasture land (PS-1 through PS-11) range from 33.2 mg/kg to 915 mg/kg. The laboratory results indicate final chloride concentrations in the road base material (RD-1 through RD-5) range from 213 mg/kg to 1,750 mg/kg. The laboratory results indicate final chloride concentrations at the caliche pad associated with the Brine Station (CP-1 through CP-3) range from 191 mg/kg to 2,250 mg/kg.

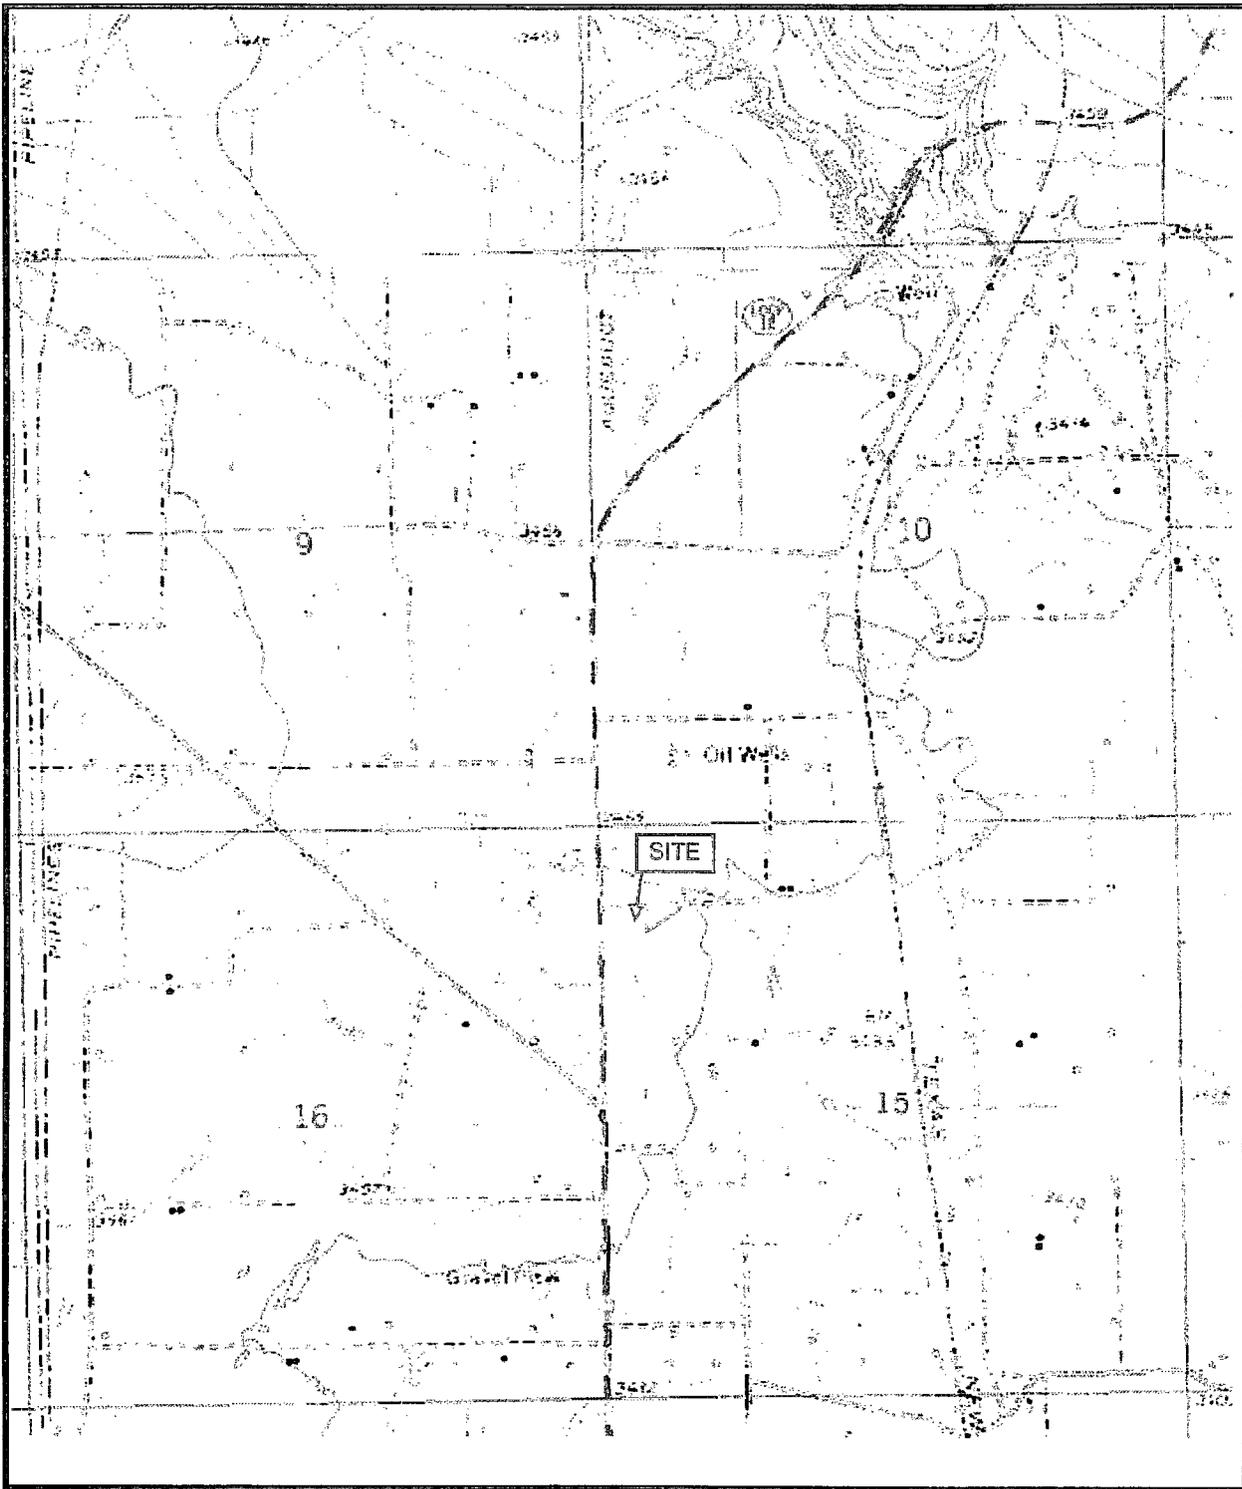

4.0 FINDINGS AND RECOMMENDATIONS

Terracon respectfully submits this closure compliance report to Key Energy Services, Inc. Based on the results of our field activities and laboratory analyses, the State "S" Brine Station cleanup standard for chlorides less than 3,000 mg/kg has been achieved. Terracon further recommends the submittal of this closure report to the New Mexico Oil Conservation Division, as documentation of the cleanup and site restoration activities at the State "S" Brine Station in Eunice, Lea County, New Mexico.

Project Address:

Brandon Wilson:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 293985. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 293985 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

A handwritten signature in black ink, appearing to read "Brent Barron, II", is written over a horizontal line.

This analytical report, and the entire data package it represents, has been made for your exclusive and confidential use. The interpretations and results expressed throughout this analytical report represent the best judgment of NENCO Laboratories. NENCO Laboratories assumes no responsibility and makes no warranty to the extent of the data hereby presented. Our liability is limited to the amount invoiced for this work order unless otherwise agreed to in writing.

Since 1999 Houston - Dallas - San Antonio - Austin - Tampa - Miami - Latin America

Brent Barron
 Odessa Laboratory Director

Flagging Criteria

- X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
 - B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
 - D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
 - E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
 - F RPD exceeded lab control limits.
 - J The target analyte was positively identified below the MQL and above the SQL.
 - U Analyte was not detected.
 - L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
 - H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
 - K Sample analyzed outside of recommended hold time.
- * Outside XENCO'S scope of NELAC Accreditation

Project Address:

Brandon Wilson:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 293993. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 293993 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

State "S" Brine Station
Project Address:

Brandon Wilson:

We are reporting to you the results of the analyses performed on the samples received under the project name referenced above and identified with the XENCO Report Number 294214. All results being reported under this Report Number apply to the samples analyzed and properly identified with a Laboratory ID number. Subcontracted analyses are identified in this report with either the NELAC certification number of the subcontract lab in the analyst ID field, or the complete subcontracted report attached to this report.

Unless otherwise noted in a Case Narrative, all data reported in this Analytical Report are in compliance with NELAC standards. Estimation of data uncertainty for this report is found in the quality control section of this report unless otherwise noted. Should insufficient sample be provided to the laboratory to meet the method and NELAC Matrix Duplicate and Matrix Spike requirements, then the data will be analyzed, evaluated and reported using all other available quality control measures.

The validity and integrity of this report will remain intact as long as it is accompanied by this letter and reproduced in full, unless written approval is granted by XENCO Laboratories. This report will be filed for at least 5 years in our archives after which time it will be destroyed without further notice, unless otherwise arranged with you. The samples received, and described as recorded in Report No. 294214 will be filed for 60 days, and after that time they will be properly disposed without further notice, unless otherwise arranged with you. We reserve the right to return to you any unused samples, extracts or solutions related to them if we consider so necessary (e.g., samples identified as hazardous waste, sample sizes exceeding analytical standard practices, controlled substances under regulated protocols, etc).

We thank you for selecting XENCO Laboratories to serve your analytical needs. If you have any questions concerning this report, please feel free to contact us at any time.

Respectfully,

Brent Barron, II

Brent Barron
Odessa Laboratory Director

Flagging Criteria

- X In our quality control review of the data a QC deficiency was observed and flagged as noted. MS/MSD recoveries were found to be outside of the laboratory control limits due to possible matrix /chemical interference, or a concentration of target analyte high enough to effect the recovery of the spike concentration. This condition could also effect the relative percent difference in the MS/MSD.
 - B A target analyte or common laboratory contaminant was identified in the method blank. Its presence indicates possible field or laboratory contamination.
 - D The sample(s) were diluted due to targets detected over the highest point of the calibration curve, or due to matrix interference. Dilution factors are included in the final results. The result is from a diluted sample.
 - E The data exceeds the upper calibration limit; therefore, the concentration is reported as estimated.
 - F RPD exceeded lab control limits.
 - J The target analyte was positively identified below the MQL and above the SQL.
 - U Analyte was not detected.
 - L The LCS data for this analytical batch was reported below the laboratory control limits for this analyte. The department supervisor and QA Director reviewed data. The samples were either reanalyzed or flagged as estimated concentrations.
 - H The LCS data for this analytical batch was reported above the laboratory control limits. Supporting QC Data were reviewed by the Department Supervisor and QA Director. Data were determined to be valid for reporting.
 - K Sample analyzed outside of recommended hold time.
- * Outside XENCO'S scope of NELAC Accreditation

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*

Brine valve was left open at load line at east end of water station by 3rd party, line drained into diked area. Dike gave way and ran down lease road onto Chevron well location.

Describe Area Affected and Cleanup Action Taken.*

Affected lease road, Chevron State S #1 Unit D, Sec15-T21S-R37E well site and area surrounding. Recovered 275bbbls with vacuum trucks. Ferrona developing workplan.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC D rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC D marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC D acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

Was a Watercourse Reached?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	If YES, Volume Impacting the Watercourse.			

If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken.*
Brine valve was left open at load line at east end of water station by 3rd party, line drained into diked area. Dike gave way and ran down lease road onto Chevron well location.

Describe Area Affected and Cleanup Action Taken.*
Affected lease road, Chevron State S #1 Unit D, Sec15-T21S-R37E well site and area surrounding. Recovered 275bbbls with vacuum trucks. Terracon removed and disposed of 1762 cubic yards of brine affected soils on behalf of Key Energy Services. Excavated areas were backfilled with landowner provided top soil (1,010 cubic yards) and landowner provided caliche (300 cubic yards) to repair affected roads. Remedial actions documented in Terracon report dated February 20, 2008 (Attached). Disturbed topsoil will be reseeded at the landowner's direction with a landowner selected seed mix.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
