RE: Annual Report of Groundwater Remediation Activities
Roswell Station Remediation Site
Chavez County, New Mexico

Enclosed for your review is the Annual Report of Groundwater Remediation Activities for the Roswell Station remediation site. This report includes the results of recent groundwater assessment and remediation work completed at the site.

If you have any questions or comments regarding this report, please contact George Robinson at (281) 797-3420 or me at (713) 989-7458.

Sincerely,

Eric Estopinal
Manager, Remediation
Transwestern Pipeline Company

- 3** Laboratory Reports for Irrigation Water Samples (on CD ROM)
- 4** Laboratory Reports for Groundwater Samples (on CD ROM)

1. Groundwater Monitoring Activities

1.1 Semiannual Groundwater Sampling Events

Two semiannual sampling events have been completed since the last report of groundwater remediation activities. These events were completed in March 23, 2006 and September 19, 2006.

Prior to sampling, the depth to water, and the depth to hydrocarbon where phase separated hydrocarbon (PSH) was present, was determined for each monitor well and recovery well. The measured depths and the corresponding water table elevation for each monitor well and recovery well is presented in Tables 1 and 2.

In the course of each sample event, groundwater samples were collected from selected monitor wells at the site. As a matter of standard operating procedure, samples were not collected from monitor wells with accumulated PSH in the well casing. A summary of field measured groundwater quality parameters obtained in the course of sampling is presented in Table 3. An updated summary of laboratory results for organic compounds is presented in Table 4. A summary of laboratory results for inorganic constituents is presented in Table 5.

A copy of the laboratory reports for the two semiannual groundwater sampling events are included as an Attachment.

1.2 Results/Conclusions from Groundwater Sampling Events

1.2.1 Occurrence and Direction of Groundwater Flow

A water table elevation map based on measurements obtained on September 19, 2006 is included as Figure 2. The information presented in Figure 2 appears to define a complex groundwater system with some areas of low flow and other areas of preferential flow. The apparent direction of groundwater flow is consistent with water table elevation maps previously developed for this site and is also consistent with the distribution of contaminants in the uppermost aquifer.

There is a sharp decline in the water table elevation following startup of the groundwater recovery and treatment system. Hydrographs for selected wells are included as Attachment #1 of this report. The hydrographs indicate about a 2.5 foot decline in the water table during the 34 month period between January 2004 and October 2006. A continued decline in the water table is anticipated and is beneficial to the remediation effort.

1.2.2 Lateral Extent of Phase Separated Hydrocarbon

The lateral extent of PSH is currently defined by the occurrence of PSH at the water table in 21 wells and the absence of PSH in all other wells. The thickness of accumulated PSH in wells is presented in Tables 1 and 2. A figure indicating the estimated area with PSH present at the water table is included as Figure 3.

On May 10, 2006, vapor samples were collected from each of the remediation system wells and delivered to a laboratory for analysis for total petroleum hydrocarbons (TPH) by method 8015mod (GRO). The results from laboratory analyses are presented in Table 9 and in Figures 7 and 8. The area defined by elevated concentrations of TPH in soil vapor corresponds well with

the area defined by PSH measured in wells. A copy of this laboratory report is included as an Attachment.

On May 10, 2006 and September 19, 2006, vapor samples were collected from each of the five remediation system circuits and delivered to a laboratory for analysis for total petroleum hydrocarbons (TPH) by method 8015mod (GRO). The concentrations of TPH found in each circuit correspond well with the area defined by the individual well analyses. The results from laboratory analyses are presented in Table 8 and in Figure 9. A copy of this laboratory report is included as an Attachment.

1.2.3 Condition of Affected Groundwater

The primary constituent of concern is benzene. Additional constituents of concern are 1,1,1-trichloroethane, 1,1-dichloroethane, and 1,1-dichloroethene. A diagram indicating the distribution of these constituents in groundwater is included as Figure 4. Only three organic constituents, benzene, 1,1-dichloroethane and 1,1-dichloroethene have been measured at concentrations above NMWQCC standards.

Startup of the groundwater recovery system appears to have accelerated the natural attenuation processes and has resulted in a decrease in contaminant concentrations at several sampling locations. It is anticipated that contaminant concentrations will continue to decline with continued operation of the groundwater recovery system.

2. Status of Remediation Activities

2.1 Remediation Activities Completed in 2006

The following remediation activities were completed during 2006:

- 1) Two routine semiannual groundwater sampling events were completed on March 23, 2006 and September 19, 2006.
- 2) The SVE system operated continuously during the year except for temporary shut-downs requiring maintenance.
- 3) Soil vapor samples were collected from each of the SVE circuits on May 10, 2006 and September 19, 2006.
- 4) Soil vapor samples were collected from each of the MPE wells on May 10, 2006.
- 5) The groundwater recovery and irrigation system operated from March 7, 2006 through November 15, 2006 except for temporary shut-downs requiring maintenance. The groundwater recovery and irrigation system was shut-down on November 15, 2006 due to cold weather and remained shut-down for the remainder of 2006. A total of 38,402 gallons (914 bbls) of groundwater was recovered, treated and irrigated on-site during 2006.
- 6) Nine routine monthly irrigation water sampling events were completed during the period that the groundwater recovery and irrigation system was in operation. A copy of these laboratory reports are included as an Attachment.

2.2 Current Status of Remediation Activities

The SVE component of the remediation system is currently in operation. The groundwater recovery, treatment, and irrigation component of the system is currently shut down and is scheduled to be restarted in April 2007.

2.3 Remediation Activities Planned for 2007

The SVE system is expected to operate continuously through December 2007. The groundwater recovery system is expected to operate through late November 2007 when it will be shut-down for the winter months. Routine operation and maintenance of the system will continue throughout 2007.

Proposed Modifications

2.4 Proposed Modifications to the Remediation System

2.4.1 Physical Modifications to the System

There are no proposed physical modifications to the remediation system at this time.

2.4.2 Operational Modifications to the System

There are no proposed operational modifications to the remediation system at this time.

2.5 Proposed Reporting Frequency

Annual reporting will continue with the next scheduled report submitted to the NMOCD by March 31, 2008.

3. Progress Toward Project Completion

The Phase I and Phase II components of the remediation system have been installed and are in operation as described in the "Conceptual Remedial Design and Discharge Plan Modification" document dated September 10, 2002. The SVE component of the system has been in operation since March 2003 and the groundwater recovery system has been in operation since April 2004.

Based upon a review of groundwater sample results, startup of the groundwater recovery system appears to have accelerated natural attenuation processes and has resulted in a decrease in contaminant concentrations at several sampling locations.

	05/07/98		(a)	83.79	(a)	3551.60

NOTES:

PSH - Phase separated hydrocarbon

Corrections to ground water surface elevation for PSH is calculated assuming a specific gravity of 0.76

(NA) Information not available

(a) Not applicable since no measurable thickness of PSH is present

(b) Elevation based on survey by Wagener Engineering dated 5/6/98

(c) Elevation based on survey by Wagener Engineering dated 9/17/98

(d) Elevation based on survey by Wagener Engineering dated 11/29/00

(e) Elevation based on survey by Wagener Engineering dated 10/03/01

(f) Elevation based on survey by Cypress Engineering dated 03/14/03

	09/19/06		(a)	33.30	(a)	NA

NOTES:

PSH - Phase separated hydrocarbon

(NA) Information not available

(a) Not applicable since no measurable thickness of PSH is present

NOTES:

All results reported above the NMWQCC Standards are shown in bold type.

(a) NA - A result for this constituent is not available

(b) Results represent total metals analysis

(c) Results represent dissolved metals analysis on samples filtered in the lab

(d) Analyte present in method blank

**Table 10. Summary of Water Treatment System Analyses
Compressor Station No. 9 - Roswell, NM**

NOTES:
Only constituents detected in one or more groundwater samples are shown in this table.

Only constituents detected in one or more groundwater samples are shown in this table. All results reported above the NMWQCC standard are shown in bold type.

(---) A result for this constituent is not available
 (a) Analyte present in method blank

**Table 11. Summary of Water Recovery and Water Irrigation Rates
TWP Roswell Compressor Station Remediation Site**

Date	Time	Inspector	Meter reading (x100 gallons)	Irrigated Volume (gallons)	Cumulative Irrigated Volume (gallons)	Elapsed Time (days)	Cumulative Elapsed Time (days)	Average Recovery Rate (GPD)	Average Recovery Rate (GPM)	Reporting Month	Monthly Irrigation Volume (gallons)	Average Irrigation Rate for Reporting Month (GPD)
------	------	-----------	---------------------------------	----------------------------------	--	---------------------------	---	-----------------------------------	-----------------------------------	--------------------	---	---

NOTES:

(a) Replaced meter on 04/07/05 (initial reading = 746 gallons)

Meter Reading (x100gallons) = Reading taken on site up to 04/07/05

Irrigated Volume (gallons) = Difference between prior meter reading and current meter reading (gallons)

Cumulative Irrigated Volume (gallons) = Cumulative sum of irrigated volume (gallons) calculated for all prior periods

Elapsed Time (days) = Calculated number of days from the prior date and time

Cumulative Elapsed Time (days) = Cumulative sum of Elapsed Time (days)

Average Recovery Rate (GPD) = Irrigated Volume (gallons) / Elapsed Time (days)

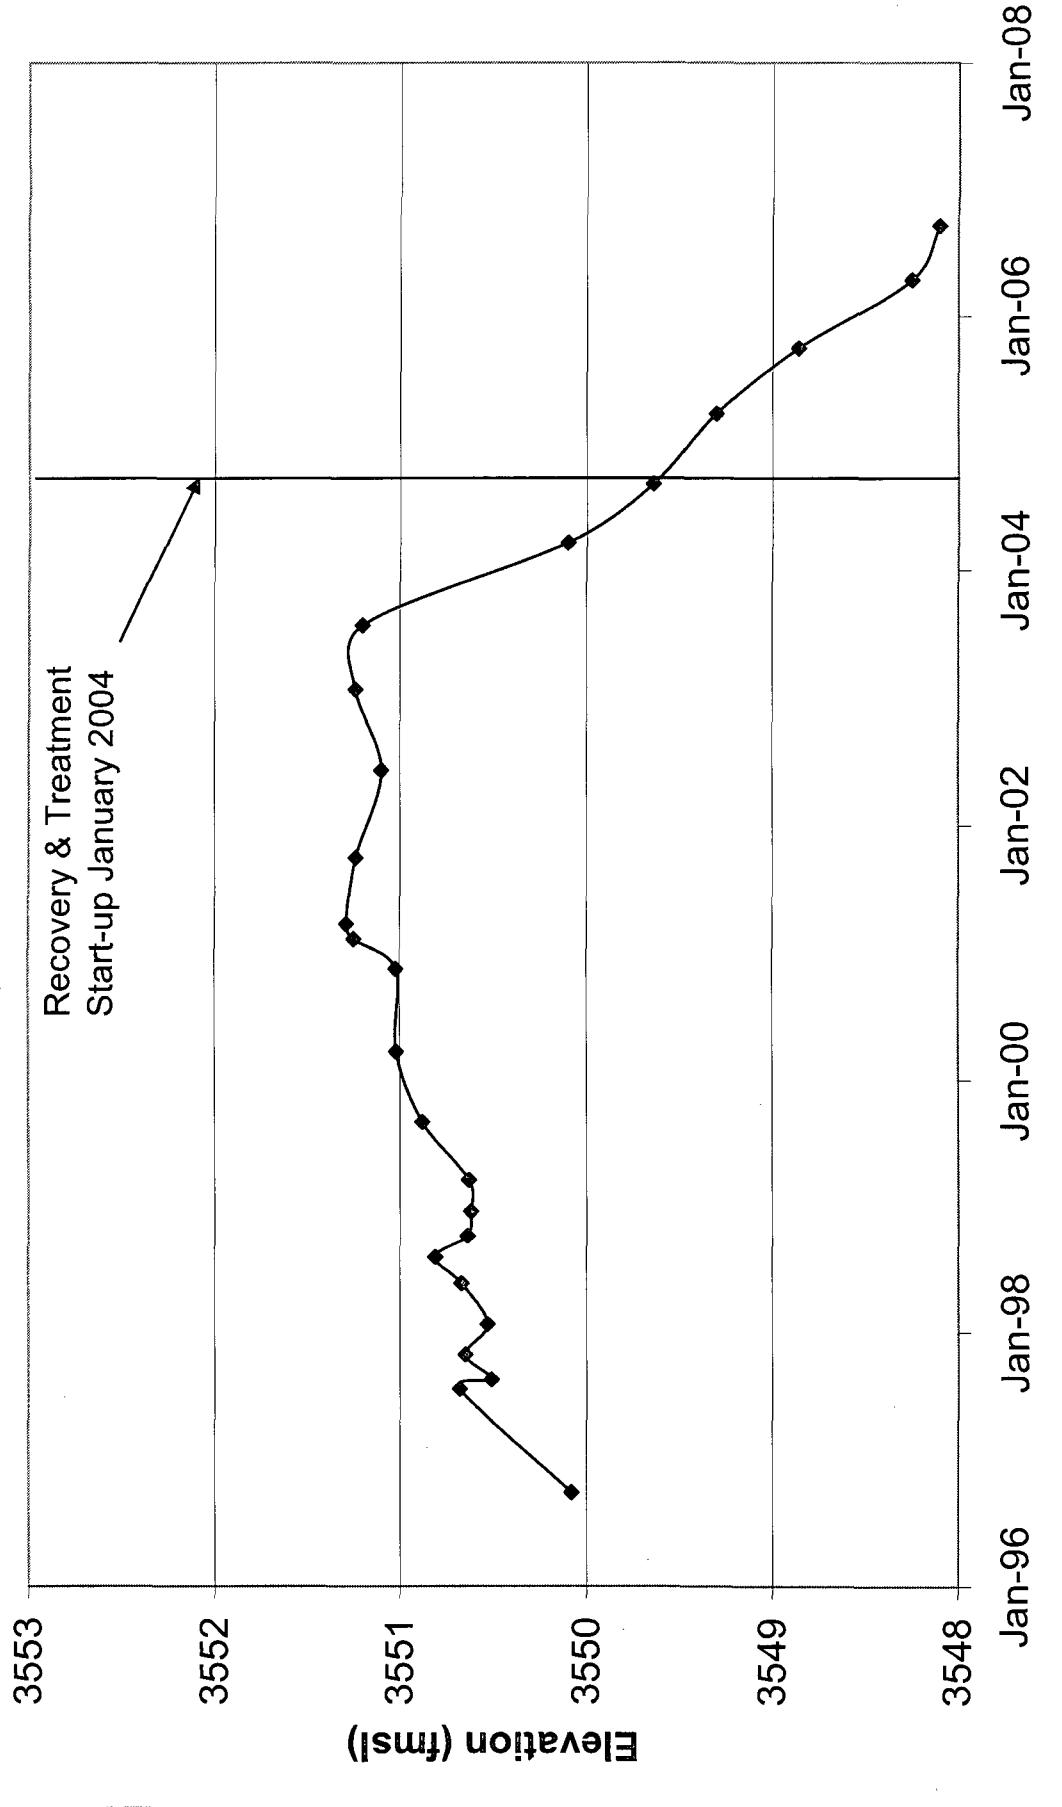

Average Recovery Rate (GPM) = Average Recovery Rate (GPD) / 24 (hours/day) / 60 (minutes/hour)

Reporting Month = Calendar month for which the Average Irrigation Rate for Reporting Month (GPD) is calculated

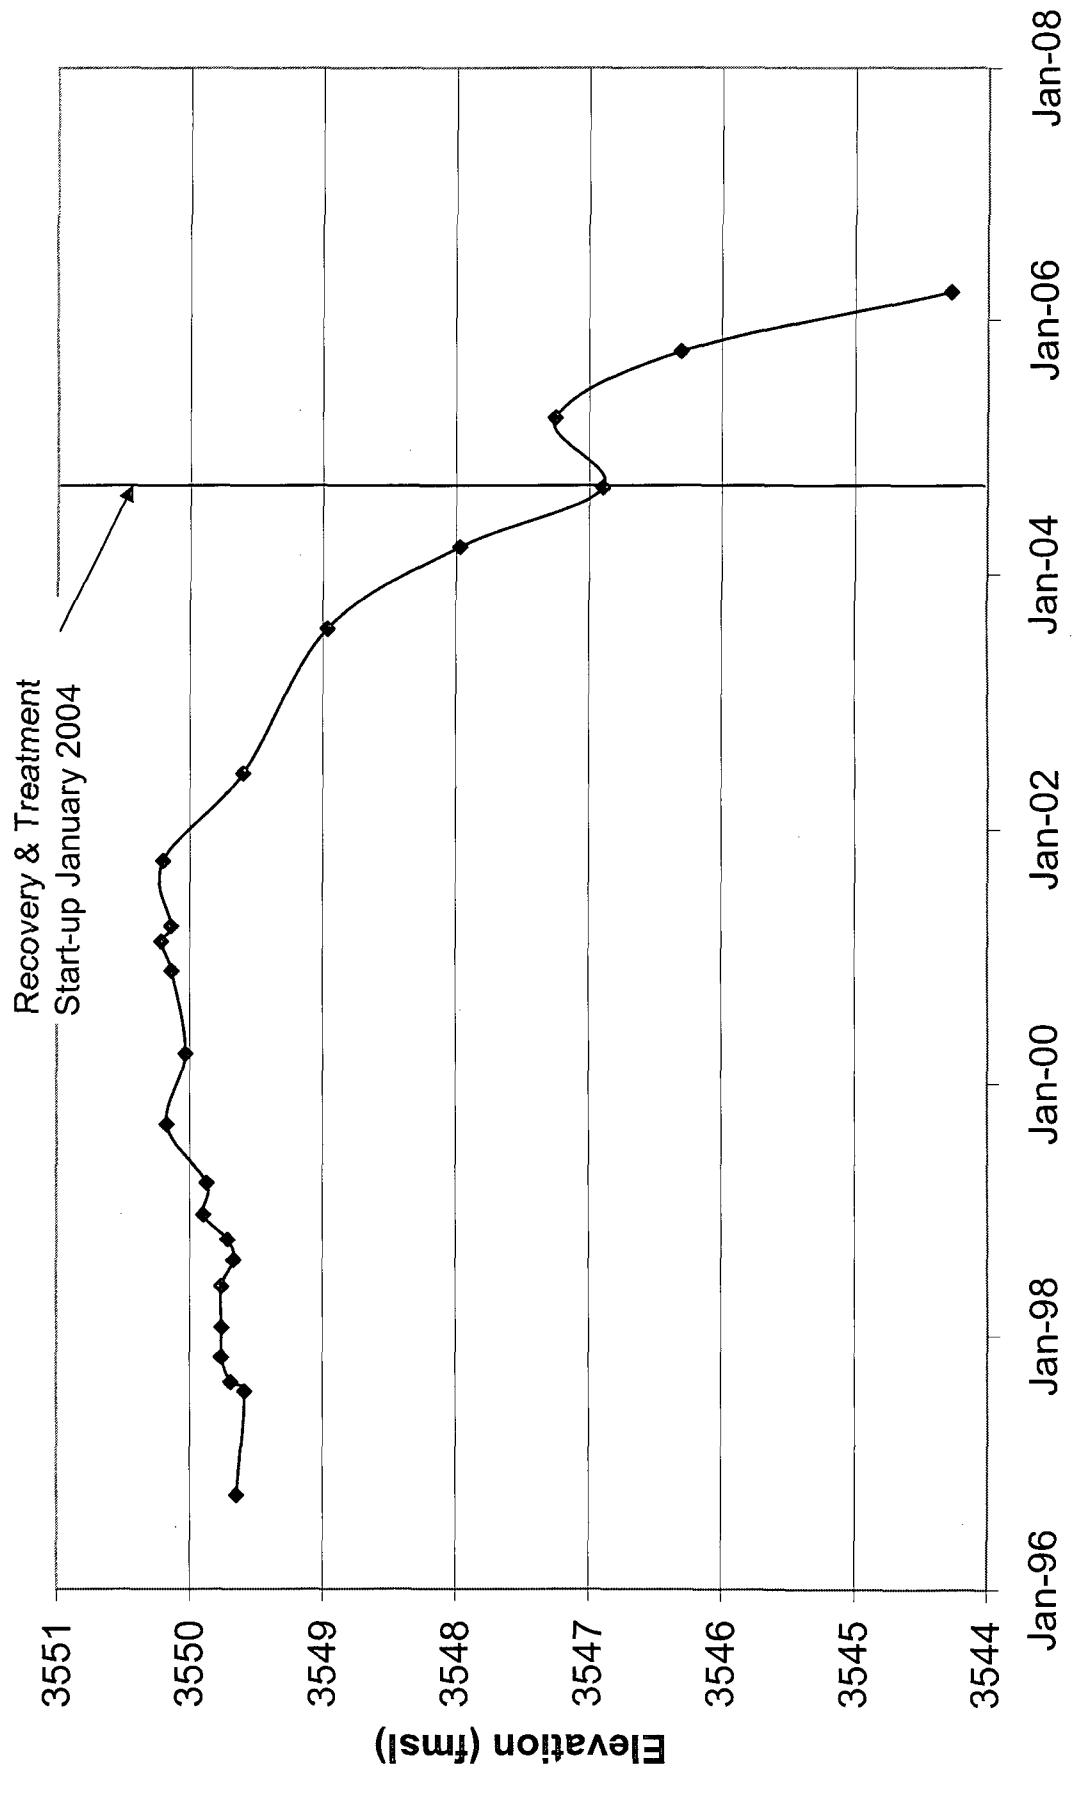

Average Irrigation Rate for Reporting Month (GPD) = Cumulative Irrigated Volume (gallons) / Reporting Month / Cumulative Elapsed Time (days) since prior Reporting Month

NA = Dummy entry for calculations of Monthly Irrigation Volume
