RE: Annual Groundwater Monitoring and Sampling Report for the Conoco Phillips and Clayton Investments Thomas No. 1 Well Location, Bloomfield, New Mexico; Permit #3RP-79-0 (July 1, 1988)

Dear Sirs:

Pursuant to New Mexico Oil Conservation Division (OCD) requirements, Animas Environmental Services, LLC (AES), on behalf of Walsh Engineering and Production Corporation (Walsh Engineering) and Clayton Investments, submits this Annual Groundwater Monitoring and Sampling Report for 2008 for the Thomas No.1 well, which is located west of Bloomfield in the NW $\frac{1}{4}$, SW $\frac{1}{4}$, Section 30, T29N, R11W, San Juan County, New Mexico. Groundwater at the site has been monitored and sampled since 1988 under Permit #3RP-79-0. A site location map is included as Figure 1.

1.0 Groundwater Monitoring and Sampling

On January 9, 2009, BioTech Remediation, Inc. (BioTech) personnel completed groundwater elevation monitoring at four monitoring wells (MW-2 through MW-5) located at the site for the 2008 groundwater sampling event. Groundwater samples from monitoring wells MW-2 and MW-3 were collected in early January 2009 for laboratory analysis of benzene, toluene, ethylbenzene, and xylene (BTEX) per EPA Method 8021 and C₆ through C₁₀ range total petroleum hydrocarbons (TPH) per EPA Method 8015. All samples were submitted to Hall Environmental Analysis Laboratory (Hall) in Albuquerque, New Mexico, for analysis. Laboratory analytical reports are found in Appendix A.

1.1 Depth to Groundwater Measurements

Depth to groundwater measurements for the accessible monitoring wells were made with a Solinst Electronic Water Level and recorded prior to sampling activities. In January 2009, groundwater measurements indicated a general increase in elevations by approximately 0.3 feet across the site. Depth to groundwater varied between 2.68 feet below top of casing (TOC) in MW-3 to 4.35 feet below TOC in MW-5. Groundwater elevations across the site ranged from 5372.00 ft AMSL in MW-5 up to 5372.88 ft AMSL

in MW-3. Hydraulic gradient was estimated to be approximately 0.002 ft/ft in a southwest direction across the site.

Historical groundwater elevation data are summarized in Table 1, and groundwater elevation data for the January 9, 2009, monitoring event are included on Figure 2.

1.2 Groundwater Sample Collection

Following well measurements in January 2009, MW-2 and MW-3 were each purged with a new disposable bailer, and a groundwater sample was collected from each well. The groundwater samples were then transferred into new clean sample containers with a slow release valve, labeled accordingly, and the Chain of Custody Record was completed. The samples were subsequently stored in an insulated cooler at approximately 4°C and transported to the analytical laboratory, Hall, Albuquerque, New Mexico.

1.3 Dissolved Phase Contaminant Concentrations

Analytical results of the groundwater samples collected from MW-2 and MW-3 on January 9, 2009, indicate that benzene concentrations were below the New Mexico Water Quality Control Commission (WQCC) standard of 10 µg/L. Benzene was reported below the detection limit of 1.0 µg/L in MW-3 and 1.3 µg/L in MW-2. Toluene, ethylbenzene, and xylene concentrations in MW-2 and MW-3 were below applicable New Mexico WQCC standards or below laboratory detection limits in both wells. Trace amounts of TPH (C₆ through C₁₀) were reported from both MW-2 and MW-3 with concentrations of 1.3 mg/L and 0.47 mg/L, respectively.

Historical groundwater contaminant concentration data are summarized in Table 2, and groundwater contaminant concentration data are shown on Figure 2.

2.0 Conclusions

BioTech personnel conducted groundwater sampling on January 9, 2009, for the fourth quarter 2008 sampling event. Based on groundwater elevation data, the hydraulic gradient at the site was calculated to be approximately 0.002 ft/ft in a southwest direction. Analytical results from both sampling events indicate that BTEX concentrations have remained below applicable WQCC standards for both MW-2 and MW-3.

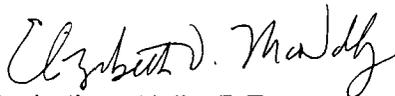

Groundwater contaminant concentrations continue to remain below all applicable WQCC standards, therefore AES recommends sampling MW-2 for two more quarters (March and June 2009). If contaminant concentrations remain below applicable standards, AES recommends the site (MW-1 through MW-5) be evaluated for closure.

If you have any questions regarding site conditions or this report, please contact me or Elizabeth McNally at (505) 564-2281.

Sincerely,

Deborah Watson
Project Manager

RE: Thomas Wells

Order No.: 0901244

Dear Ross Kennemer:

Hall Environmental Analysis Laboratory, Inc. received 2 sample(s) on 1/16/2009 for the analyses presented in the following report.

These were analyzed according to EPA procedures or equivalent. Below is a list of our accreditations. To access our accredited tests please go to www.hallenvironmental.com or the state specific web sites.

Reporting limits are determined by EPA methodology. No determination of compounds below these (denoted by the ND or < sign) has been made.

Please don't hesitate to contact HEAL for any additional information or clarifications.

Sincerely,

Andy Freeman, Business Manager
Nancy McDuffie, Laboratory Manager

Matrix:

Carrier name Greyhound

- Shipping container/cooler in good condition? Yes No Not Present
- Custody seals intact on shipping container/cooler? Yes No Not Present Not Shipped
- Custody seals intact on sample bottles? Yes No N/A
- Chain of custody present? Yes No
- Chain of custody signed when relinquished and received? Yes No
- Chain of custody agrees with sample labels? Yes No
- Samples in proper container/bottle? Yes No
- Sample containers intact? Yes No
- Sufficient sample volume for indicated test? Yes No
- All samples received within holding time? Yes No
- Water - VOA vials have zero headspace? No VOA vials submitted Yes No
- Water - Preservation labels on bottle and cap match? Yes No N/A
- Water - pH acceptable upon receipt? Yes No N/A

Container/Temp Blank temperature?

1°

<6° C Acceptable

If given sufficient time to cool.
