#### Describe Cause of Problem and Remedial Action Taken.\*

During the course of the pit closure process, a composite soil sample was obtained and analyzed as required. Benzene, BTEX, , GRO/DRO, and chlorides we either non-detectable or well below the limits set forth by NM OCD, however, lab results indicate a TPH level of 4,220ppm. Further excavation will continue with soil samples being obtained and analyzed until the TPH reaches an acceptable level per NM OCD.

#### Describe Area Affected and Cleanup Action Taken.\*

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOC rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOC marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOC acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
