WATER @ 43'

Describe Cause of Problem and Remedial Action Taken * An 8" fiberglass trunk line that is used to carry produced fluid from North Hobbs Unit Satellite #25 to the North Hobbs Unit Central T/B developed a leak causing spill. Isolated the trunk line by shutting valves at both ends.

Describe Area Affected and Cleanup Action Taken. * Area affected is approximately 50' X 100' of pasture to the east of NHU Satellite #25. All fluid possible was recovered via vacuum truck. Affected area will be remediated to NMOCD guidelines for spills

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.

RE: Remediation Plan
North Hobbs Unit Sat. #25 Trunk line
UL 'J', Sec. 25, T-18-S, R-37-E

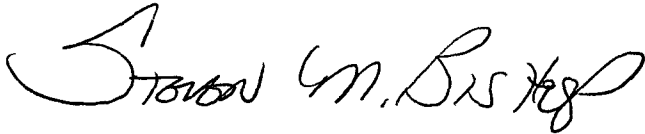

Leak occurred on 11/26/2008, at approximately 08:00 AM. An 8" fiberglass trunk line used to transfer fluid from North Hobbs Unit Satellite #25 to the North Hobbs Unit Central T/B developed a leak causing spill. Valves on both ends of the trunk line were shut to isolate leak. The line operates between 35 and 40 pounds and North Hobbs Unit Satellite #25 produces approximately 400 barrels of total fluid per day. The exact throughput of the line is unknown since there are 2 trunk lines that transfer produced fluid from this satellite. The area affected by this spill is an area measuring approximately 50' X 100', in the pasture directly east of Satellite #25 east fence. Approximately 17 barrels total was spilled, 2 barrels oil and 15 barrels of water. 1 barrel of oil and 10 barrels of water was recovered via vacuum trucks. The State of New Mexico is the surface owner. Depth to ground water according to State Engineers Office is an average of 42', for all wells in the area, giving this spill site a ranking of 20. Remediation of the spill site will be as follows:

1. Piping will be excavated and repaired.
2. Affected area will be excavated and soil hauled to an approved site.
3. Soil samples will be obtained from affected area.
4. NMOCD guidelines will be used to insure entire site is in compliance with guidelines.
5. Soils removed will be replaced with clean fresh soils, where needed.
6. Soil analysis data will be submitted with final closure letter.
