**OIL AND GAS ALLOCATION PROCEDURE**

The following procedure will be used to allocate the oil production from the San Juan 28-6 Unit 211E and 400.

1. Based on historic oil production from the SJ Unit 211E establishing it's Allocation GOR to be 9,510 mscf/bbl.
2. We will conduct a 1 month test on the SJ Unit 400. This will be accomplished by producing this well into an isolated vessel independent of SJ Unit 211E, and obtaining direct measurements to verify oil production (see attached schematic for isolation clarification). Based on tested oil and gas production during the 1 month test, this well's Allocation GOR will be established.
3. Following the test, both wells will be commingled into a common tank.
4. Each time oil is sold from the commingled tank, the oil production attributed to each well will be allocated based on the percent contributions from each well. The percent contributions from each well will be calculated by;

(Cum gas volume sold) / tested Allocation GOR, scf/bbl
