RE: Amend Commingling Order PLC-201

Dear Mr. Jones:

XTO Energy Inc. requests an amendment to Surface Commingling Order PLC-201. We no longer wish to include the Abrams Gas Com J #1 (API #30-045-25898) in the Surface Commingling Order. The remaining wells to be surface commingled are the Abrams Gas Com C #1 (API #30-045-07880), an existing Pictured Cliffs well, and the Hare Gas Com C #1E (API #30-045-23566), an existing Dakota well.

The existing gas meter on the Hare Gas Com C #1E will be used as the central distribution point (CDP) gas sales meter for the two wells. The existing gas meter on the Abrams Gas Com C #1 will become the allocation meter after surface commingling. Production will be allocated using the same methodology as was approved in the original Order. Gas production will be calculated by the difference between the CDP meter and allocation meter. Fuel usage will be allocated between the two wells proportional to their gas production. The oil and water production from each well will be kept separate and not surface commingled.

Per your phone conversation of September 12, 2002 with Holly Perkins, we understand that this letter notifying you of our proposed change in commingling is all that is necessary to request Commingling Order PLC-201 be amended. Attached is our proposed diagram of the commingling installation. If you need additional information or have any questions I may be contacted at (505) 324-1090.

Sincerely,

A handwritten signature in cursive script that reads 'Ray Martin'.
