RE: Application for Surface Commingling

Dear Ms. Wrotenbery and Mr. Lovato :

This is a request for approval to surface commingle the gas production from the wells listed below:

- Proposed System.** Surface commingling will allow production through only two compressors as opposed to a compressor for each well, thereby allowing the containment of operating costs and prolonging the economic life of the wells. The

wells are commingled upstream of a CPD meter (number 99 973 01) to reduce measurement costs. All wells have an allocation meter on location. El Paso will maintain the CPD meter and the applicant, Coleman Oil & Gas, Inc. ("Coleman") will maintain the allocation meters. The gas will flow into the El Paso Natural Gas gathering system, in the NENW of Section 13 – Twp 26 N – Rge 12 W.

2. **Location Map.** Exhibit 1 is a topographic map showing the locations of the wells subject to this Application for Surface Commingling.
3. **Well, Locations and Lease Numbers.** Exhibit 2 consists of acreage dedication plats for the subject wells. The wells and acreage dedications are tabulated below.

Exhibit 3 is a list of the royalty, overriding royalty and working interest owners in the wells.

4. **Schematic Diagram.** Exhibits 5 through 5E are schematic diagrams of the proposed surface commingling facilities.
5. **Lease Use Gas.** Each well has a pumping unit that uses approximately 1.5 MCFD of lease use gas and a separator that uses approximately 0.5 MCFD of lease use gas. Two compressors serve the system using approximately 120 MFCD of lease use gas which is allocated equally between the wells subject to this Application for Surface Commingling. When and if additional equipment is added to the system lease use gas to operate such equipment will be split equally between producing wells upstream of such equipment.
6. **Mechanical Integrity.** The entire system of flow lines will be 4" diameter - 0.156" wall thickness X42 steel pipe with an API pressure rating of 1750 psig. This line and

all connections will be tested to 500 psig. The average operating pressure of El Paso's lateral 10D is 60 psig; the maximum operating pressure is 150 psig.

7. **Production – Gravity/BTU.** Production data is attached as Exhibit 4A – 4J. Gas Analysis reports are attached as Exhibit 4K – 4T. Only the Navajo Smith well produces liquid hydrocarbons (at stripper rates).

The Navajo Smith well on its own couldn't support a single pipeline. At the onsite inspection of the first group of new wells in this system to be brought on production it was requested that the then surface pipeline for the Navajo Smith well be buried and included in this system. The Navajo Smith surface pipeline was removed for environmental and safety issues. The current route for the Navajo Smith pipeline is different than that of the old surface pipeline.

8. **Allocation Formula.** All wells have an allocation meter on location. The production assigned to each well will be the integrated volume from the CPD meter less the sum of the other allocation meters plus lease use gas. As an example¹, the CPD meter indicates total production of 3,325 MCF. Other well 1 allocation meter indicates 400 MCF production. Other well 2 allocation meter indicates 350 MCF production. Other well 3 allocation meter indicates 1,200 MCF production. Other well 4 allocation meter indicates 275 MCF production. The sum of these other well allocation meters is 2,225 MCF. CPD meter of 3,325 MCF less the sum of other allocation meters of 2,225 MCF plus lease use gas of 2 MCF is 1,102 MCF, the calculated production of the well in question. When the sum of the allocation meters doesn't equal the CPD meter, the gas production from each well will be calculated according to the volume its allocation meter indicates was produced divided by the sum of all of the allocation meters (percent) multiplied by the CPD meter indicated production plus lease use gas. As an example², the CPD meter indicates an integrated volume of 40,000 MCF gas was produced but the sum of the allocation meters indicate that 39,000 MCF was produced. The allocation meter of the well in question indicates 10,000 MCF of production divided by the sum of the allocation meters (39,000 MCF) equals 25.64% multiplied by the CPD meter volume of 40,000 MCF equals 10,256 MCF plus lease use gas of 60 MCF totals 10,316 MCF, the calculated production of the well in question. Royalties will be paid on the volumes according to applicable MMS and State of New Mexico guidelines.
9. **Line Purging.** It is anticipated that line purging will occur infrequently. Any lost gas due to purging the system will be allocated equally to each of the wells.
10. **Purged Fluids.** Any fluids purged will be natural gas and condensed water vapor.
11. **Meter Calibration Schedule.** El Paso will calibrate the CPD meter at least once each quarter, more frequently with higher gas volumes. Coleman will calibrate the allocation meters semi annually.

Page 4

12. Gas Analysis Schedule. El Paso Field Services will analyze the gas from the commingled stream at least twice a year, more frequently with higher gas volumes.

13. Effective Date. It is requested that the approval for the Surface Commingling contemplated herein be retroactive to April 07, 2000 the date the first group of wells (Sharen #2, Sharen Com #1, Knicks #1, Cardinal Com #1) were first delivered. The system has been operational since April 07, 2000.

Sincerely,
