## General Description of Remedial Action: This junction and line were eliminated

under the pipeline replacement/upgrade program. After the former junction was removed, an investigation was conducted using a backhoe to collect soil samples at regular intervals.

Chloride field tests were performed on each sample, which yielded low concentrations of

chloride similar to that of the background sample. Organic vapors were measured using

a PID, which also yielded low concentrations. The deepest sample, 7 ft BGS, was sent to a commercial laboratory for analysis, which

confirmed low concentrations of chloride and organics. The excavated soil was returned to the excavation to ground surface and contoured

to the surrounding area. On 2/05/2010, site was seeded with a blend of native vegetation and is expected to return to a productive capacity

at a normal rate.

PLEASE NOTE: Liability and Damages. Cardinal's liability and client's exclusive remedy for any claim arising, whether based in contract or tort, shall be limited to the amount paid by client for analyses. All claims, including those for negligence and any other cause whatsoever shall be deemed waived unless made in writing and received by Cardinal within thirty (30) days after completion of the applicable service. In no event shall Cardinal be liable for incidental or consequential damages, including, without limitation, business interruptions, loss of use, or loss of profits incurred by client, its subsidiaries, affliates or successors arising out of or related to the performance of services hereunder by Cardinal, regardless of whether such claim is based upon any of the above-stated reasons or otherwise. Results relate only to the samples identified above. This report shall not be reproduced except in full with written approval of Cardinal Laboratories. .
