- VII. 1. Average injection rate will be \approx 15,000 bwpd.
 Maximum injection rate will be \approx 20,000 bwpd.
2. System will be open and closed. Water will both be trucked and the well will be tied into a proposed Apache pipeline system.
3. Average injection pressure will be \approx 1,000 psi
 Maximum injection pressure will be \approx 1,658 psi (= 0.2 psi/foot x \approx 8,290' (highest perforation)).

4. The water to be disposed of will be produced water from Apache wells, mainly from the Yeso. Apache has 134 Yeso wells in T. 17 S., R. 30 & 31 E. and T. 18 S., R. 30 & 31 E. A summary of analyses from the closest Yeso (≈ 10 miles west), Wolfcamp (≈ 5 miles north), and Cisco (≈ 14 miles northeast) wells in the WAIDS data base follows. If there are multiple samples from the same well, then the data below represents the average (all in mg/l). The abstracts are in Exhibit G. No compatibility problems have been reported from the closest (4,115' southeast) Wolfcamp disposal well (SWD-1146; 30-015-31635) or from the closest (≈ 7 miles northwest) Cisco disposal well (SWD-1213; 30-015-37831).

5. There is no Wolfcamp production within one mile. Closest ($\approx 1\frac{1}{2}$ miles northeast) Wolfcamp production is Apache's Junction Federal #1 (30-015-33533). Closest (3,095' northwest) Cisco production was Texaco's Loco 25 Federal Com #1 (30-015-29476). It produced 1,529 barrels of oil and 2,938 Mcf gas between February 9, 1999 and its plugging date on August 9, 2000.

VIII. The Wolfcamp ($\approx 800'$ thick) in this well is on the transition from the Delaware shelf to its basin. The Wolfcamp consists of limestone alternating

with dolomite and shale. The latter two have little porosity and and confine the dolomite. The dolomite (diagenetically alternated carbonate) is the goal within the Wolfcamp. The Cisco ($\approx 600'$ thick) is mainly limestone with some dolomite intervals. Porosity as high as 20% has been reported.

Closest possible underground source of drinking water above the proposed disposal interval is the Quaternary deposit at the surface. A wood windmill is ≈ 0.95 miles northwest in the SWSE Section 26. According to the grazing permittee, it has been dry for over 30 years. No underground source of drinking water is below the proposed disposal interval.

Anticipated formation tops are:

Quaternary = 0'
Rustler = 285'
Yates = 1,609'
Seven Rivers = 1,959'
Queen = 2,614'
Grayburg = 3,075'
San Andres = 3,247'
Glorieta = 5,050'
Yeso = 5,138'
Tubbs = 6,600'
Abo: 7,242'
Wolfcamp = 8,277'
Wolfcamp Reef = 8,465'
Cisco = 9,085'
Total Depth: 9,700'

There are no water wells within a minimum 2,000 meter (= 6,560') radius according to State Engineer records (see Exhibit H). However, there is one dry windmill within a one mile radius (see Exhibit H) and is not listed in the State Engineer's records. It is a wood windmill which has been dry for over 30 years according to the grazing permittee, Williams & Son Cattle Company.

There will be $>8,000'$ of vertical separation and the Rustler salt interval between the bottom of the only likely underground water source (Quaternary) and the top of the Wolfcamp.

Produced water has been injected or disposed into zones above (Grayburg-Jackson; Seven Rivers - Queen - Glorieta - San Andres), opposite (Wolfcamp), and below (Morrow) the proposed disposal interval within Section 36 and the bordering sections.

IX. The well will be stimulated with acid to clean out scale or fill.

X. Cement bond, spectral gamma ray, density, dual laterolog/MSFL, and neutron logs will be run.

XI. Based on a field inspection and a review of the State Engineer's records, there is one water well within a one mile radius. It is a wood windmill which has been dry for over 30 years.

XII. Apache is not aware of any geologic or engineering data which may indicate the Wolfcamp or Cisco are in hydrologic connection with any underground sources of water. There are 26 Wolfcamp salt water disposal wells and 57 Wolfcamp water injection wells in New Mexico. There are 18 Cisco salt water disposal wells and 9 water injection wells in New Mexico.

XIII. Notice (this application) has been sent (Exhibit I) to the surface owner (New Mexico State Land Office), all leasehold operators (Oxy, Chevron, BP, Asher, Astons, Calco, Eako, Valko, Barr & Wilson, Camterra, Carr & General Operating, EOG, Fair, LBO NM, Meagher, Neste, Nortex, Pendragon, Resource Investment, Olsen, Socorro Properties, Three Rivers Acquisition, Xeric, Yates Energy, Yates Petroleum, Chisos, ConocoPhillips, Edge Petroleum, Enervest, Burnett Trust, Tandy Estate, Anne Windfohr, Pure Energy, Windfohr Trust, Texas Reef Exploration, Texas Refining, Devon, Armstrong LP, Judah Oil, Marbob, McCombs Energy, McInnes Resources, Merit Energy, Paloma Resource, and Pitch Energy), and lessor of unleased land (BLM) within a half mile.

Hello Brian:

I have the #1 almost ready to release.

Would you or someone at Apache Corp let me know what the API number is for this well? Or an estimate of when that will be?

If you wish to refer me to someone who prepares the APD's within Apache, please do.

Hope all is well in Eldorado - how could it not be?

Hello Brian,
How are you today?

I have the application evaluated and have a couple questions,

*Corrected
B (Brian Wood)*

There is some question as to whether this is Section 30 or Section 36? The header on pages of the application says Section 30, but the AOR wells were in 36....

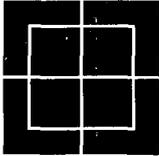

Do you have any idea when Apache will get the APD approved for this well? This is a State well, so shouldn't take that long. I like to have API numbers if possible when processing the SWD permits – it saves time and prevents problems later with our record keeping and/or the internal database.

Also, would you please ask Apache what will be the procedure for evaluating the upper Wolfcamp formation for productivity? I see they will run logs and CBL, but how else?
If productive, would it be "gas" or an oil well? Yates dropped its protest on this application – so there must have been some discussion on this subject. I may need to put something in the SWD permit requiring an evaluation and report back to OCD.

Thank You,

William V. Jones, P.E.

Re: Protest of Yates Petroleum Corporation to C-108 Application for Authorization to Inject filed by Apache Corporation for the Apache State SWD #1.

Dear Chief Hearing Officer Ezeanyim:

Pursuant to 19.15.26.8 NMAC, Yates Petroleum Corporation hereby objects to the Application for Authorization to Inject, Form C-108, filed by Apache Corporation on or about February 28, 2011, and received by Yates on March 4, 2011. The C-108 proposes administrative approval of the Apache State SWD #1 well as a water disposal well, with a depth of 9,700' and a proposed injection zone identified as the Wolfcamp and Cisco (from 8,290' to 9,690'). The location of the proposed well is approximately 3 ½ air miles east-southeast of Loco Hills, New Mexico, at 660' FNL and 1980' FEL, Sec. 36, T. 17 S., R. 30 E., Eddy County, New Mexico.

Pursuant to 19.15.26.8 (B), Yates hereby requests a hearing on the Application to present evidence establishing, among other matters, that the proposed Application is not protective of correlative rights because it proposes disposal in a productive zone and, additionally, there is no evidence presented within the Application that the proposed disposal will be into a zone containing waters having total dissolved solids concentration greater than 10,000 mg/l.

Yates reserves the right to make additional objections based on evidence to be submitted with its statement of position submitted before the hearing.
