RE: Plains Pipeline, L.P. C. S. Gayler Release Site
NMOCD Reference # AP-052
Unit Letter B of Section 6, Township 17 South, Range 37 East
Lea County, New Mexico

Dear Mr. Hansen:

Plains Pipeline, L.P. is pleased to submit the attached Quarterly Report, dated November 11, 2011, for the C.S. Cayler release site located in Section 6 of Township 17 South, and Range 37 East of Lea County, New Mexico. This document summarizes the status of recent activities performed during the third quarter of 2011.

Should you have any questions or comments, please contact me at (575) 441-1099.

Sincerely,

Jason Henry

Re: Plains Pipeline, L.P. C.S. Cayler (Plains SRS #2002-10250)

Third Quarter 2011 Summary

NMOCD Reference # AP-052 (Old 1R-0382)

UL-M (NW $\frac{1}{4}$ of the NE $\frac{1}{4}$) of Section 6, T17S, R37E

Latitude: 32° 52' 2.45"N and Longitude: 103° 17' 17.73"W

**Landowner: Robert Rice
Lea County, New Mexico**

Dear Mr. Hansen:

Talon/LPE (Talon) is submitting this letter report on behalf of Plains Pipeline, L.P. (Plains) that summarizes the third quarter 2011 groundwater monitoring activities.

Remediation Activities

During the third quarter of 2011, two (2) specific gravity skimmers with bladder pumps were in operation in monitor wells MW-7A and MW-12 and five (5) total fluids pumps were in operation in monitor wells MW-1A, MW-2A, MW-3, MW-4 and MW-5. The skimmers and total fluids pumps are utilized to recover phase separated hydrocarbons (PSH) and to inhibit migration of the PSH and dissolved-phase plumes. The recovery system is inspected and maintained on a weekly basis in order to optimize efficiency and recovery rates.

Attachments to this letter report include a site plan, gradient map, and a PSH thickness isopleth map combined with dissolved-phase distribution located in Appendix A. A synopsis of the historical groundwater gauging data and groundwater analytical results are provided in Appendix B and the laboratory analytical report with chain-of-custody are located in Appendix C.

During the second quarter, the system recovered approximately 3,792 barrels of water of which, 3,856 barrels of water was transferred by pump to the Rocky Smith saltwater disposal facility. Approximately 16 barrels of crude oil was recovered by the system and 57 barrels of oil was contained in the recovery tank at the end of the quarter. No crude oil was removed from the recovery tank during the third quarter.

Third Quarter Groundwater Monitoring Event

The third quarter 2011 groundwater monitoring event was conducted on September 28 and 29, 2011. Prior to the event, the PSH recovery system was shut-down and the recovery pumps were pulled in order to allow the potentiometric surface to stabilize. During the groundwater monitoring event, all monitor wells were measured with an interface probe to determine static water levels and PSH thicknesses if present.

Groundwater samples were collected from seven (7) monitor wells (MW-8A, MW-11, MW-12A and MW-15 through MW-18). The samples were submitted to the laboratory for quantification of benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA SW-846, Method 8021B. Groundwater samples were not collected from monitor wells MW-1A through MW-6, MW-7A, and MW-12 due to the presence of PSH. Groundwater samples were not collected from monitor wells MW-9 and MW-10 because they were dry or from MW-13 or MW-14 because they did not contain enough water to collect a sample.

Results of the Groundwater Monitoring Event

Data collected from the September 2011 groundwater monitoring event exhibited the following results.

- Benzene concentrations ranged from <0.00100 mg/L to 13.9 mg/L. Benzene concentrations exceeded the New Mexico Water Quality Control Commission (NMWQCC) remediation threshold of 0.010 mg/L in groundwater samples collected from monitor wells MW-8A, MW-12A, and MW-16.
- Toluene concentrations ranged from <0.00100 mg/L to 0.144 mg/L. Toluene concentrations did not exceed the NMWQCC remediation threshold of 0.750 mg/L in any of the groundwater samples collected.
- Ethylbenzene concentrations ranged from <0.00100 mg/L to 0.264 mg/L. Ethylbenzene concentrations did not exceed the NMWQCC remediation threshold of 0.750 mg/L in any of the groundwater samples collected.
- Total xylene concentrations ranged from <0.00100 mg/L to 0.265 mg/L. Total xylene concentrations did not exceed the NMWQCC remediation threshold of 0.620 mg/L in any of the groundwater samples collected.
- Dissolved-phase concentrations remained relatively stable in sampled monitor wells except for a significant increase in total BTEX in up-gradient monitor well MW-16. The dissolved-phase plume is currently delineated and stable.
- PSH thicknesses typically fluctuate from quarter to quarter but have declined overall since PSH recovery operations were initiated. For the third quarter, PSH thicknesses exhibited slight to moderate declines and increases in all impacted monitor wells. The largest increases in PSH thicknesses occurred in monitor wells MW-3 of 3.05-ft. and MW-2A of 4.43-ft. The total depth for MW-2A is 109.32 feet, which is 21.22 feet deeper than MW-2. The water detected by the interface probe in MW-2, during the gauging event, is likely residual water trapped in the casing shoe. Based on current depth to water data, it is likely that groundwater levels have declined below the total depth of MW-2.
- Data collected from groundwater monitoring event indicated an average decline in groundwater levels of 0.89 feet. The decline appears to be associated with a regional declining trend in Ogallala groundwater levels.

Recommendations

Currently the system is operating as designed. Talon offers no recommendations for changes at this time.

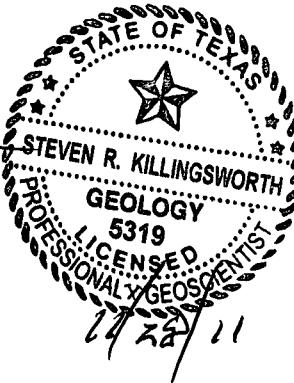

If you have any questions or require further information, please contact me at (432) 522-2133 or Mr. Jeffrey Dann at (713) 646-4657.

Sincerely,

Steven R. Killingsworth, P.G.

Analytical and Quality Control Report

Steve Killingsworth
Talon LPE-Midland
2901 State Highway 349
Midland, TX, 79706

Report Date: September 30, 2011

Work Order: 11092906

Project Location: Cayler, NM
Project Number: 700376.049.01
SRS #: 2002-10250

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
278577	MW-11	water	2011-09-28	14:45	2011-09-28
278578	MW-15	water	2011-09-28	14:00	2011-09-28
278579	MW-16	water	2011-09-28	13:42	2011-09-28
278580	MW-17	water	2011-09-28	13:40	2011-09-28
278581	MW-18	water	2011-09-28	14:20	2011-09-28

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 12 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Case Narrative

Samples for project were received by TraceAnalysis, Inc. on 2011-09-28 and assigned to work order 11092906. Samples for work order 11092906 were received intact without headspace and at a temperature of 5.5 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	72276	2011-09-29 at 13:23	85129	2011-09-29 at 13:23
Total BTEX	S 8021B	72276	2011-09-29 at 13:23	85129	2011-09-29 at 13:23

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11092906 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL

Analytical and Quality Control Report

Steve Killingsworth
Talon LPE-Midland
2901 State Highway 349
Midland, TX, 79706

Report Date: October 4, 2011

Work Order: 11093003

Project Location: Cayler, NM
Project Number: 700376.049.01
SRS #: 2002-10250

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
278649	MW-8A	water	2011-09-29	10:57	2011-09-30
278650	MW-12A	water	2011-09-29	11:20	2011-09-30

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 11 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

Dr. Blair Leftwich, Director
Dr. Michael Abel, Project Manager

Case Narrative

Samples for project were received by TraceAnalysis, Inc. on 2011-09-30 and assigned to work order 11093003. Samples for work order 11093003 were received intact without headspace and at a temperature of 3.7 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	72321	2011-09-30 at 16:30	85186	2011-09-30 at 16:30
BTEX	S 8021B	72355	2011-10-03 at 12:06	85222	2011-10-03 at 12:06
Total BTEX	S 8021B	72321	2011-09-30 at 16:30	85186	2011-09-30 at 16:30
Total BTEX	S 8021B	72355	2011-10-03 at 12:06	85222	2011-10-03 at 12:06

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11093003 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL

RE: Plains Pipeline, L.P. C. S. Cayler Release Site
NMOCD Reference # AP-052
Unit Letter B of Section 6, Township 17 South, Range 37 East
Lea County, New Mexico

RECEIVED OCT
2011 AUG 22 P 12

Dear Mr. Hansen:

Plains Pipeline, L.P. is pleased to submit the attached Quarterly Report, dated August 10, 2011, for the C.S. Cayler release site located in Section 6 of Township 17 South, and Range 37 East of Lea County, New Mexico. This document summarizes the status of recent activities performed during the second quarter of 2011.

Should you have any questions or comments, please contact me at (575) 441-1099.

Sincerely,

Jason Henry
Remediation Coordinator
Plains Pipeline, L.P.

RECEIVED OOD

Dear Mr. Hansen:

Talon/LPE (Talon) is submitting this letter report on behalf of Plains Pipeline, L.P. (Plains) that summarizes the second quarter 2011 groundwater monitoring activities.

Remediation Activities

During the second quarter of 2011, two (2) specific gravity skimmers with bladder pumps were in operation in monitor wells MW-7A and MW-12 and four (4) total fluids pumps were in operation in monitor wells MW-1A, MW-2A, MW-4 and MW-5. The skimmers and total fluids pumps are utilized to recover phase separated hydrocarbons (PSH) and to inhibit migration of the PSH and dissolved-phase plumes. The recovery system is inspected and maintained on a weekly basis in order to optimize efficiency and recovery rates.

Attachments to this letter report include a site plan, gradient map, and a PSH thickness isopleth map combined with dissolved-phase distribution located in Appendix A. A synopsis of the historical groundwater gauging data and groundwater analytical results are provided in Appendix B and the laboratory analytical report with chain-of-custody are located in Appendix C.

During the second quarter, the system recovered approximately 2,058 barrels of water of which, 1,191 barrels of water was either transferred by pump to the Rocky Smith saltwater disposal facility or disposed by vacuum truck. Approximately 76 barrels of crude oil was recovered by the system and 41 barrels of oil was in the recovery tank at the end of the quarter.

Second Quarter Groundwater Monitoring Event

The second quarter 2011 groundwater monitoring event was conducted on June 22 and 23, 2011. Prior to the event, the PSH recovery system was shut-down and the recovery pumps were pulled in order to allow the potentiometric surface to stabilize. During the groundwater monitoring event, all monitor wells were measured with an interface probe to determine static water levels and PSH thicknesses if present. Groundwater samples were collected from nine (9) monitor wells (MW-8A, MW-11, MW-12A and MW-13 through MW-18). The samples were submitted to the laboratory for quantification of benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA SW-846, Method 8021B. Groundwater samples were not collected from monitor wells MW-1A through MW-6, MW-7A, and MW-12 due to the presence of PSH. A groundwater sample was not collected from monitor wells MW-9 because it was dry.

Results of the Groundwater Monitoring Event

Data collected from the June 2011 groundwater monitoring event exhibited the following results:

- Benzene concentrations ranged from <0.00100 mg/L to 31.9 mg/L. Benzene concentrations exceeded the New Mexico Water Quality Control Commission (NMWQCC) remediation threshold of 0.010 mg/L in groundwater samples collected from monitor wells MW-8A, MW-12A, MW-13, MW-13 and MW-16.
- Toluene concentrations ranged from <0.00100 mg/L to 2.11 mg/L. The toluene concentration exceeded the NMWQCC remediation threshold of 0.750 mg/L in the groundwater sample collected from monitor well MW-12A.
- Ethylbenzene concentrations ranged from <0.00100 mg/L to 1.32 mg/L. The ethylbenzene concentration exceeded the NMWQCC remediation threshold of 0.750 mg/L in the groundwater sample collected from monitor well MW-12A.
- Total xylene concentrations ranged from <0.00100 mg/L to 2.40 mg/L. The total xylene concentration exceeded the NMWQCC remediation threshold of 0.620 mg/L in the groundwater sample collected from monitor well MW-12A.
- Dissolved-phase concentrations exhibited slight increases in total BTEX in monitor wells MW-13, MW-14 and MW-16. Down-gradient monitor wells MW-11 and MW-18 remained non-detect. The dissolved-phase plume is currently delineated and stable.
- PSH thicknesses typically fluctuate from quarter to quarter but have declined overall since PSH recovery operations were initiated. For the second quarter, PSH thicknesses exhibited moderate declines in all impacted monitor wells by an average of 2.40-feet with the largest decline in MW-4 of 3.3-ft. A first appearance of PSH occurred in MW-6 during the second quarter of 0.12-ft.
- Data collected from groundwater monitoring event indicated an average decline in groundwater levels of 1.18-ft. Monitor well MW-9 gauged dry for the first time. The decline appears to be associated with a regional declining trend in Ogallala groundwater levels.

Additional Actions Performed

- Total fluids pump were installed in monitor well MW-2A and MW-4.
- A skimmer with bladder pump was installed in monitor well MW-7A.

- Monitor wells MW-2A and MW-12A were drilled and completed as replacement wells because groundwater levels had declined in monitor wells MW-2 and MW-12 to a level that interfered with the efficiency of the pumps installed in those wells. A skimmer and bladder pump was not moved from monitor well MW-12 to MW-12A because MW-12A has not exhibited impact from PSH to date.

Recommendations

- If groundwater levels continue to decline and not be detected in monitor well MW-9, then that well should be plugged and abandoned and replaced.

If you have any questions or require further information, please contact me at (432) 522-2133 or Mr. Jeffery Dann at (713) 646-4657.

Sincerely,

Steven R. Killingsworth, P.G.
Senior Project Manager

Corrected Groundwater Elevation = Top of Casing Elevation - (Depth to Water Below Top of Casing - (SG)(PSH Thickness)) SG=0.835

** Estimated Product Thickness using Total Depth of Well as the Depth to Water.

ND = Not Detected

NS = Not Surveyed

btoc = Below Top of Casing

amsl = Above Mean Sea Level

## Analytical and Quality Control Report

Steve Killingsworth  
Talon LPE-Midland  
2901 State Highway 349  
Midland, TX, 79706

Report Date: July 5, 2011

Work Order: 11062407

Project Location: Hobbs, NM  
Project Name: C.S. Cayler  
Project Number: 700376.049.01  
SRS #: 2002-10250

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
270346	MW 8A	water	2011-06-23	11:50	2011-06-24
270347	MW 11	water	2011-06-22	12:45	2011-06-24
270348	MW 12A	water	2011-06-23	12:10	2011-06-24
270349	MW 13	water	2011-06-22	13:40	2011-06-24
270350	MW 14	water	2011-06-22	13:05	2011-06-24
270351	MW 15	water	2011-06-22	13:00	2011-06-24
270352	MW 16	water	2011-06-22	13:45	2011-06-24
270353	MW 17	water	2011-06-22	13:43	2011-06-24
270354	MW 18	water	2011-06-22	12:50	2011-06-24

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 18 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

## Case Narrative

Samples for project C.S. Cayler were received by TraceAnalysis, Inc. on 2011-06-24 and assigned to work order 11062407. Samples for work order 11062407 were received intact without headspace and at a temperature of 3.8 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	70199	2011-06-29 at 15:12	82649	2011-06-29 at 15:12
BTEX	S 8021B	70202	2011-06-29 at 15:31	82652	2011-06-29 at 15:31
BTEX	S 8021B	70249	2011-06-30 at 13:54	82701	2011-06-30 at 13:54

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11062407 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.

### Laboratory Certifications

C	Certifying Authority	Certification Number	Laboratory Location
-	NCTRCA	WFWB384444Y0909	TraceAnalysis
-	DBE	VN 20657	TraceAnalysis
-	HUB	1752439743100-86536	TraceAnalysis
-	WBE	237019	TraceAnalysis
1	NELAP	T104704219-11-TX	Lubbock

### Standard Flags

F	Description
B	Analyte detected in the corresponding method blank above the method detection limit
H	Analyzed out of hold time
J	Estimated concentration
Jb	The analyte is positively identified and the value is approximated between the SDL and MQL. Sample contains less than ten times the concentration found in the method blank. The result should be considered non-detect to the SDL.
Je	Estimated concentration exceeding calibration range.
Qc	Calibration check outside of laboratory limits.
Qr	RPD outside of laboratory limits
Qs	Spike recovery outside of laboratory limits.
Qsr	Surrogate recovery outside of laboratory limits.
U	The analyte is not detected above the SDL

Unit Letter B of Section 6, Township 17 South, Range 37 East  
Lea County, New Mexico

Dear Mr. Hansen:

Plains Pipeline, L.P. is pleased to submit the attached Quarterly Report, dated April 25, 2011, for the C.S. Cayler release site located in Section 6 of Township 17 South, and Range 37 East of Lea County, New Mexico. This document summarizes the status of recent activities performed during the first quarter of 2011.

Should you have any questions or comments, please contact me at (575) 441-1099.

Sincerely,

Jason Henry  
Remediation Coordinator  
Plains Pipeline, L.P.

Landowner: Robert Rice  
Lea County, New Mexico

Dear Mr. Hansen:

Talon/LPE (Talon) is submitting this letter report on behalf of Plains Pipeline, L.P. (Plains) that summarizes the first quarter 2011 groundwater monitoring activities.

#### Remediation Activities

During the most of the first quarter of 2011, three (3) specific gravity skimmers with bladder pumps were in operation in monitor wells MW-4, MW-5 and MW-12, and three (3) total fluids pumps were in operation in monitor wells MW-1A, MW-2, and MW-3. Currently, there are two (2) skimmers in operation in monitor wells MW-4 and MW-12 and three (3) total fluids pumps in operation in monitor wells MW-1A, MW-3 and MW-5. The skimmers and total fluids pumps are utilized to recover phase separated hydrocarbons (PSH) and to inhibit migration of the PSH and dissolved-phase plumes. The recovery system is inspected and maintained on a weekly basis in order to optimize efficiency and recovery rates.

Attachments to this letter report include a site plan, gradient map, and a PSH thickness isopleth map combined with dissolved-phase distribution located in Appendix A. A synopsis of the historical groundwater gauging data and groundwater analytical results are provided in Appendix B and the laboratory analytical report with chain-of-custody are located in Appendix C.

During the first quarter, the system recovered approximately 863 barrels of water and 959 barrels of water was either transferred by pump to the Rocky Smith saltwater disposal facility or disposed by vacuum truck. Approximately 23 barrels of crude oil was recovered by the system and 40 barrels of oil is currently in the recovery tank.

### **First Quarter Groundwater Monitoring Event**

The first quarter 2011 groundwater monitoring event was conducted on March 25, 2011. Prior to the event, the PSH recovery system was shut-down and the recovery pumps were pulled in order to allow the potentiometric surface to stabilize. During the groundwater monitoring event, all monitor wells were measured with an interface probe to determine static water levels and PSH thicknesses if present. Groundwater samples were collected from ten (10) monitor wells (MW-6, MW-9, MW-10, MW-11, and MW-13 through MW-18). The samples were submitted to the laboratory for quantification of benzene, toluene, ethylbenzene, and total xylenes (BTEX) using EPA SW-846, Method 8021B. Groundwater samples were not collected from monitor wells MW-1A through MW-5, and MW-12 due to the presence of PSH. In addition, groundwater samples were not collected from monitor wells MW-7 and MW-8 because groundwater levels have declined below the total depth of those wells.

### **Results of the Groundwater Monitoring Event**

Data collected from the March 2011 groundwater monitoring event exhibited the following results:

- Benzene concentrations ranged from <0.00100 mg/L to 0.228 mg/L. Benzene concentrations exceeded the New Mexico Water Quality Control Commission (NMWQCC) remediation threshold of 0.010 mg/L in groundwater samples collected from monitor wells MW-6, MW-9, MW-10, MW-13 and MW-16.
- Toluene concentrations ranged from <0.00100 mg/L to 0.0573 mg/L. Toluene concentrations did not exceed the NMWQCC remediation threshold of 0.750 mg/L in any collected groundwater sample.
- Ethylbenzene concentrations ranged from <0.00100 mg/L to 0.00830 mg/L. Ethylbenzene concentrations did not exceed the NMWQCC remediation threshold of 0.750 mg/L in any collected groundwater sample.
- Total xylene concentrations ranged from <0.00100 mg/L to 0.106 mg/L. Total xylene concentrations did not exceed the NMWQCC remediation threshold of 0.620 mg/L in any collected groundwater sample.
- Dissolved-phase concentrations were generally stable during the first quarter exhibiting only slight increases in total BTEX. BTEX concentrations did not exceed the laboratory method reporting limits in down-gradient monitor wells MW-11 and MW-18; therefore, the dissolved-phase plume is currently stable and delineated.
- PSH thicknesses typically fluctuate from quarter to quarter but have declined overall since PSH recovery operations was initiated.
- Gauging data collected from the groundwater monitoring event indicated a decline in groundwater levels averaging 0.15-ft. The decline appears to be associated with a regional declining trend in Ogallala groundwater levels.

### **Additional Actions Performed**

- The total fluids pump was removed from monitor well MW-2 and installed in monitor well MW-5.

- Monitor wells MW-7 and MW-8 were plugged and abandoned because groundwater levels had declined below the total depths in both wells. Monitor wells MW-7a and MW-8A were drilled and completed as replacement wells.
- Two polyethylene recovery tanks were removed from service and replaced with a 350-barrel frac tank. The replacement recovery tank was plumbed with a pump to transfer recovered water to the Rocky Smith SWD.

### Recommendations

- Since groundwater levels are continuing to decline at the site, monitor wells MW-2 and MW-12 will likely exhibit groundwater levels that will fall below their total depths in the near future. In addition, the extent of the current fluid columns in MW-2 and MW-12 inhibits the efficient operation of recovery pumps. Therefore, additional, monitor wells MW-2A and MW-12A should be installed proximal to MW-2 and MW-12 to a total depth of at least 105-ft to facilitate efficient pump operation.
- Two pneumatic total fluids pumps should be installed in new monitor wells MW-2A and MW-12A to support groundwater drawdown in order to mitigate plume migration and to augment PSH recovery.

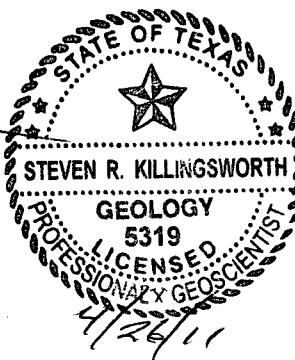

If you have any questions or require further information, please contact me at (432) 522-2133 or Mr. Jeffery Dann at (713) 646-4657.

Sincerely,

Steven R. Killingsworth, P.G.  
Senior Project Manager

Corrected Groundwater Elevation = Top of Casing Elevation - (Depth to Water Below Top of Casing - (SG)(PSH Thickness)) SG=0.835

** Estimated Product Thickness using Total Depth of Well as the Depth to Water.

ND = Not Detected

NM = Not Measured

btoc = Below Top of Casing

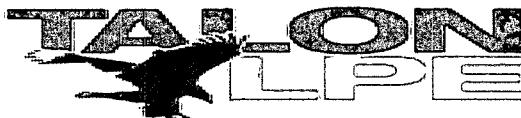

amsl = Above Mean Sea Level

## Analytical and Quality Control Report

Steve Killingsworth  
Talon LPE-Midland  
2901 State Highway 349  
Midland, TX, 79706

Report Date: April 4, 2011

Work Order: 11032528

Project Location: Hobbs, NM  
Project Name: C.S. Cayler  
Project Number: 700376.049.01  
SRS #: 2002-10250

Enclosed are the Analytical Report and Quality Control Report for the following sample(s) submitted to TraceAnalysis, Inc.

Sample	Description	Matrix	Date Taken	Time Taken	Date Received
261805	MW-6	water	2011-03-25	13:37	2011-03-25
261806	MW-9	water	2011-03-25	11:46	2011-03-25
261807	MW-10	water	2011-03-25	11:55	2011-03-25
261808	MW-11	water	2011-03-25	12:07	2011-03-25
261809	MW-13	water	2011-03-25	13:25	2011-03-25
261810	MW-14	water	2011-03-25	10:47	2011-03-25
261811	MW-15	water	2011-03-25	10:38	2011-03-25
261812	MW-16	water	2011-03-25	10:27	2011-03-25
261813	MW-17	water	2011-03-25	10:09	2011-03-25
261814	MW-18	water	2011-03-25	13:15	2011-03-25

These results represent only the samples received in the laboratory. The Quality Control Report is generated on a batch basis. All information contained in this report is for the analytical batch(es) in which your sample(s) were analyzed.

This report consists of a total of 10 pages and shall not be reproduced except in its entirety, without written approval of TraceAnalysis, Inc.

---

Dr. Blair Leftwich, Director  
Dr. Michael Abel, Project Manager

#### Standard Flags

**B** - The sample contains less than ten times the concentration found in the method blank.

## Case Narrative

Samples for project C.S. Cayler were received by TraceAnalysis, Inc. on 2011-03-25 and assigned to work order 11032528. Samples for work order 11032528 were received intact without headspace and at a temperature of 2.8 C.

Samples were analyzed for the following tests using their respective methods.

Test	Method	Prep Batch	Prep Date	QC Batch	Analysis Date
BTEX	S 8021B	67884	2011-04-01 at 08:56	80013	2011-04-01 at 09:19

Results for these samples are reported on a wet weight basis unless data package indicates otherwise.

A matrix spike (MS) and matrix spike duplicate (MSD) sample is chosen at random from each preparation batch. The MS and MSD will indicate if a site specific matrix problem is occurring, however, it may not pertain to the samples for work order 11032528 since the sample was chosen at random. Therefore, the validity of the analytical data reported has been determined by the laboratory control sample (LCS) and the method blank (MB). These quality control measures are performed with each preparation batch to ensure data integrity.

All other exceptions associated with this report have been footnoted on the appropriate analytical page to assist in general data comprehension. Please contact the laboratory directly if there are any questions regarding this project.
